

TS9105 TURBO-SEEDER™ PLUS

Combine the benefits of cover crop application and soil management with the TS9105 Turbo-Seeder PLUS from Great Plains! These mounted units are designed to accurately meter cover crops or fertilizer with high quality injection-molded augers.

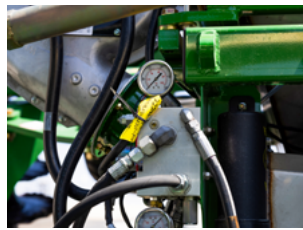

With Turbo-Seeder PLUS, producers can simultaneously till the soil, size residue, and apply fertilizer or cover crops in a single pass. Available on select sizes of VT1100 Turbo-Max® and HT1100 Terra-Max®.

Features & Benefits

HIGH-CAPACITY DESIGN

These large-capacity 30 and 50 cu. ft. tanks allow producers to cover more acres between fills. Product fill screens prevent foreign materials from plugging tubes or damaging metering systems.

SINGLE PWM HYDRAULIC BLOCK

Only one set of hydraulic couplers is required to control the product metering system. The hydraulics include built-in safety valves to protect the system and fan motor. A single hydraulic input reduces hydraulic requirements.

METERING SYSTEMS

With one of the industry's most versatile and efficient metering systems, both the fan and drive are run by one hydraulic outlet. Seeds and fertilizer are metered through durable, high-density plastic augers.

TECH PACKAGE OPTIONS

The GSC-1000 offers speed-compensated rate control and an implement lift switch. The optional MDRC package includes the ISOBUS rate controller with implement switch, plus variable rate capabilities. An ISO scale is available for either package.

ADDITIONAL STANDARD FEATURES

- Configurable delivery tubes to fit your needs
- Food grade stainless steel and poly construction
- Simple, pressurized tanks maintain air pressure for greater accuracy
- Corrosion-resistant components
- Wide steps and walkboards
