NEW!

Optimize your tracking cabinet with an LED indicator!

SUREDRI ENDOSCOPE DRYING CABINET

Harloff's SureDry Scope Cabinet includes the industry best Positive Pressure HEPA Filtered Drying system. Inside air is replaced inside the cabinet up to four times per minute. Meets or exceeds AORN, SGNA and AAMI guidelines (including ANSI/AAMI ST91:2021 updated guidelines).

DRI-SCOPE AID® EQUIPPED CABINET

Harloff's SureDry + Dri-Scope Aid® is the industry leading internal lumen drying system. Endoscope channels are dried with the Dri-Scope Aid® internal lumen drying system which uses simple-to-attach scope connectors to provide constant flow, consistent pressure and repeatable results.

"SMART" SCOPE TRACKING SYSTEM WITH DRI-SCOPE AID®

We combined SureDry positive pressure with the next generation Dri-Scope Aid® Tracker System, creating our first "smart" scope cabinet. The integrated color touchscreen digitally displays scope status, user access, check-ins/outs, displays processing times and provides customizable drying options with unique settings for each scope. Also includes a customizable hang time monitor with an intelligent automated scheduler and downloadable export files for scope management and user lists.

LED Indicator + Cabinet

This smart scope cabinet upgrade, designed for Harloff's next generation "Tracker" scope monitoring system, provides tracking of endoscopes throughout the drying process, virtually eliminating the possibility of accidentally using expired scopes.

- Simplifies scope placement and improves hanging & retrieval of endoscopes by your staff by up to 25%
- The scope holder's proprietary LED system syncs the LED color with the Tracker tablet on the door's touchpad
- Reduces human error and scope identification mistakes
- Improves the efficiency and accelerates speed of the endo process
- Virtually eliminates the possibility of using expired scopes
- Easily ID scopes without having to check serial numbers

SLIMLINE CABINETS

Standard SureDry cabinets have a 24" cabinet depth, but some facilities require the slimmest, most space saving options available. Our Slimline scope cabinet has a 18" cabinet depth, ideal for hallways and other tight spots.

WHY USE AN ENDOSCOPE "TRACKER" SYSTEM?

Harloff's next generation "Tracker" scope tracking system from Dri-Scope Aid® adds yet another component to your SureDry scope cabinet, the ability to monitor the drying process and to display staff check-ins/check-outs and other scope functions using a built in touch tablet configured to your scope inventory. Functions of this smart technology include:

- Customizable settings and drying options unique to each endoscope
- Intelligent automated scheduler
- Maintains records of scope drying events, user access, check-ins and check-outs
- Screen access by authorized personnel completed by passcode
- Adjustable timing options
- At a glance, display shows scope inventory and reprocessing status
- Downloadable export files available for endoscope management, user lists and more
 - Customizable Hang Time Monitor

PASS THROUGH CABINETS

This double sided pass through cabinet allows access between both procedure and reprocessing rooms. This in-wall system has multiple available locking options and can hold up to 10 scopes with our secure adjustable mounting system. Each cabinet comes with 4 intake and 2 exhaust fans and tempered glass doors, one on each side. This model comes equipped with Dri-Scope Aid®, the industry best lumen drying system.

OPTIONAL LED LIGHTING

Add optional LED lighting to your scope cabinet, improving illumination so that your staff can better evaluate scope inventory. Lighting is activated by a door sensor that triggers on when the cabinet doors are opened and off when the doors are closed. Your staff can control the bright-

ness level by a dimmer switch. This lighting kit is available for all widths of scope cabinet, but must be factory installed.

WHY IS A POSITIVE PRESSURE SYSTEM IMPORTANT?

The unique design of the SureDry Scope Cabinet includes both top fans for intake and lower fans for exhaust. This push/pull design creates a vortex of air that flows through the cabinet ensuring maximum drying efficiency.

INTAKE:

Intake airflow comes through separate HEPA filters (which remove 99.7% of particulates, .03 Microns) driven by fully redundant fans producing a positive pressure vortex from the cabinet top. This creates an even circular motion of airflow over all scopes.

EXHAUST:

The lower exhaust fans pull the circulated air out of the cabinet ensuring the flow of air is consistent from top to bottom, providing a complete drying system for the entire scope. This push/pull multiple fan system (an industry first) ensures a positive pressure system to meet all major guidelines and it ensures forced drying and equal drying levels across the full length of each and every scope.

ST91:2021

SureDry Cabinets are a Smart Choice to Meet and Exceed ANSI/AAMI ST91:2021 and Other Guidelines

The references below are taken from these guidelines. Channel drying available only with the addition of the Dri-Scope Aid® system.

Scopes Stored Vertically

11.2.1 "stored vertically, the insertion tube should be as straight as possible, with the distal tip hanging freely."
11.2.1 "When flexible and semi-rigid endoscopes are hung in the vertical position, coiling or kinking is prevented."

Hanging Freely Without Coiling

11.2.2 "should be stored in a cabinet that is of sufficient height, width, and depth to allow flexible endoscopes to hang vertically without coiling and without any components touching the bottom of the cabinet."

Channel Drying + Forced Air

8.2.5.1 "Flexible endoscopes with channels should be dried for a minimum of 10-minutes with pressure-regulated forced instrument air or a minimum of HEPA-filtered air." | 8.2.5.2 Use pressure-regulated instrument air or HEPA-filtered air to dry the channels in accordance with the manufacturer's written IFU.

HEPA Filtered Positive Pressure

11.2.2.2 Cabinets that enable circulation of HEPA-filtered or instrument air through the cabinet at... positive pressure.
NOTE: SureDry cabinets feature an industry leading 3 intake and 2 exhaust fan system.

Easy Scope Identification*

11.2.3 "Protocols should be developed to help ensure that users can readily identify an endoscope that has been processed and is ready for patient use." * Available with Tracker-equipped SureDry scope cabinets

Single-Use Connectors

Use of single use connectors ensures no cross-contamination as well as simplifies staff efficiency.

Clinical Documentation

ASGE "Drying the interior of an endoscope should use a sufficiently prolonged flow of medical air through all accessible channels, ideally simultaneously and for at least 10 minutes, for greatest efficiency." Per the study, "Multisociety guideline on reprocessing flexible GI endoscopes: 2016 update."
NOTE: SureDry cabinets are the only clinically proven vertical drying cabinet.

RELATED HARLOFF SCOPE PRODUCTS

BRONCHOSCOPE AND ENT SCOPE CABINETS

This wall mounted ENT scope drying cabinet allows for ENT scopes to be vertically hung and dried in the same safe, efficient manner of endoscopes.

SCOPE TRANSIT SYSTEM

Designed for the storage and safe transport of scope trays. Carts can be color coded to signify clean, patient ready scopes vs. soiled scopes.

DILATOR CABINETS

Vertically hang 24 or 36 Savary-Gilliard® Dilators of differing widths for channel drying, exterior drying and storage. Our short cart can hold dilators up to 28" in length. Our tall cart can hold dilators up to 39" in length. Available with or without a drying package.

CUSTOM DESIGNS

*We offer custom designs to fit any scope cabinet need including options for **unique space challenges, different scope types** and much more!*

SC8030-MOBILEKIT

Any size of scope cabinet can be converted into a mobile version with the addition of this mobile kit. Includes four 3" casters plus a steel mounting plate. Available in stainless steel or heat sealed powder coat steel. Factory install only.
