

Central Fill Automation Technology

Engineering the Future of Pharmacy

Central Fill Automation Engineered for Scale

Explore how Capsa's Central Fill automation drives every stage of the fulfillment workflow to increase throughput, reduce labor costs, and support long-term growth.

Medium-Volume Counting Cell

Uses compact, swappable canisters to automate more SKUs in a smaller footprint and adapt quickly to med changes.

HV Wall & HV Cell

High-volume vial filling automates up to 90% of oral solid dispensing and scales easily with prescription volume.

Vial Selection & Labeling

The system selects the right vial, applies a label, and moves it seamlessly onto the conveyor.

Begin Oral Solids Dispensing Process

Begin Unit-of-Use Dispensing Process

Manual Filling

Manual stations handle low-volume prescriptions with guided accuracy, maintaining workflow speed.

Imaging & PV2 Verification

Each vial is imaged for inspection, then verified by a pharmacist through the PV2 system before proceeding.

Capping

A tamper-evident cap is applied after pharmacist verification to secure the vial for final packaging.

De-Pucking, Collation, & Bagging

Orders are automatically de-pucked, grouped, bagged, and labeled for shipment, reducing manual steps and ensuring completeness.

Sorting

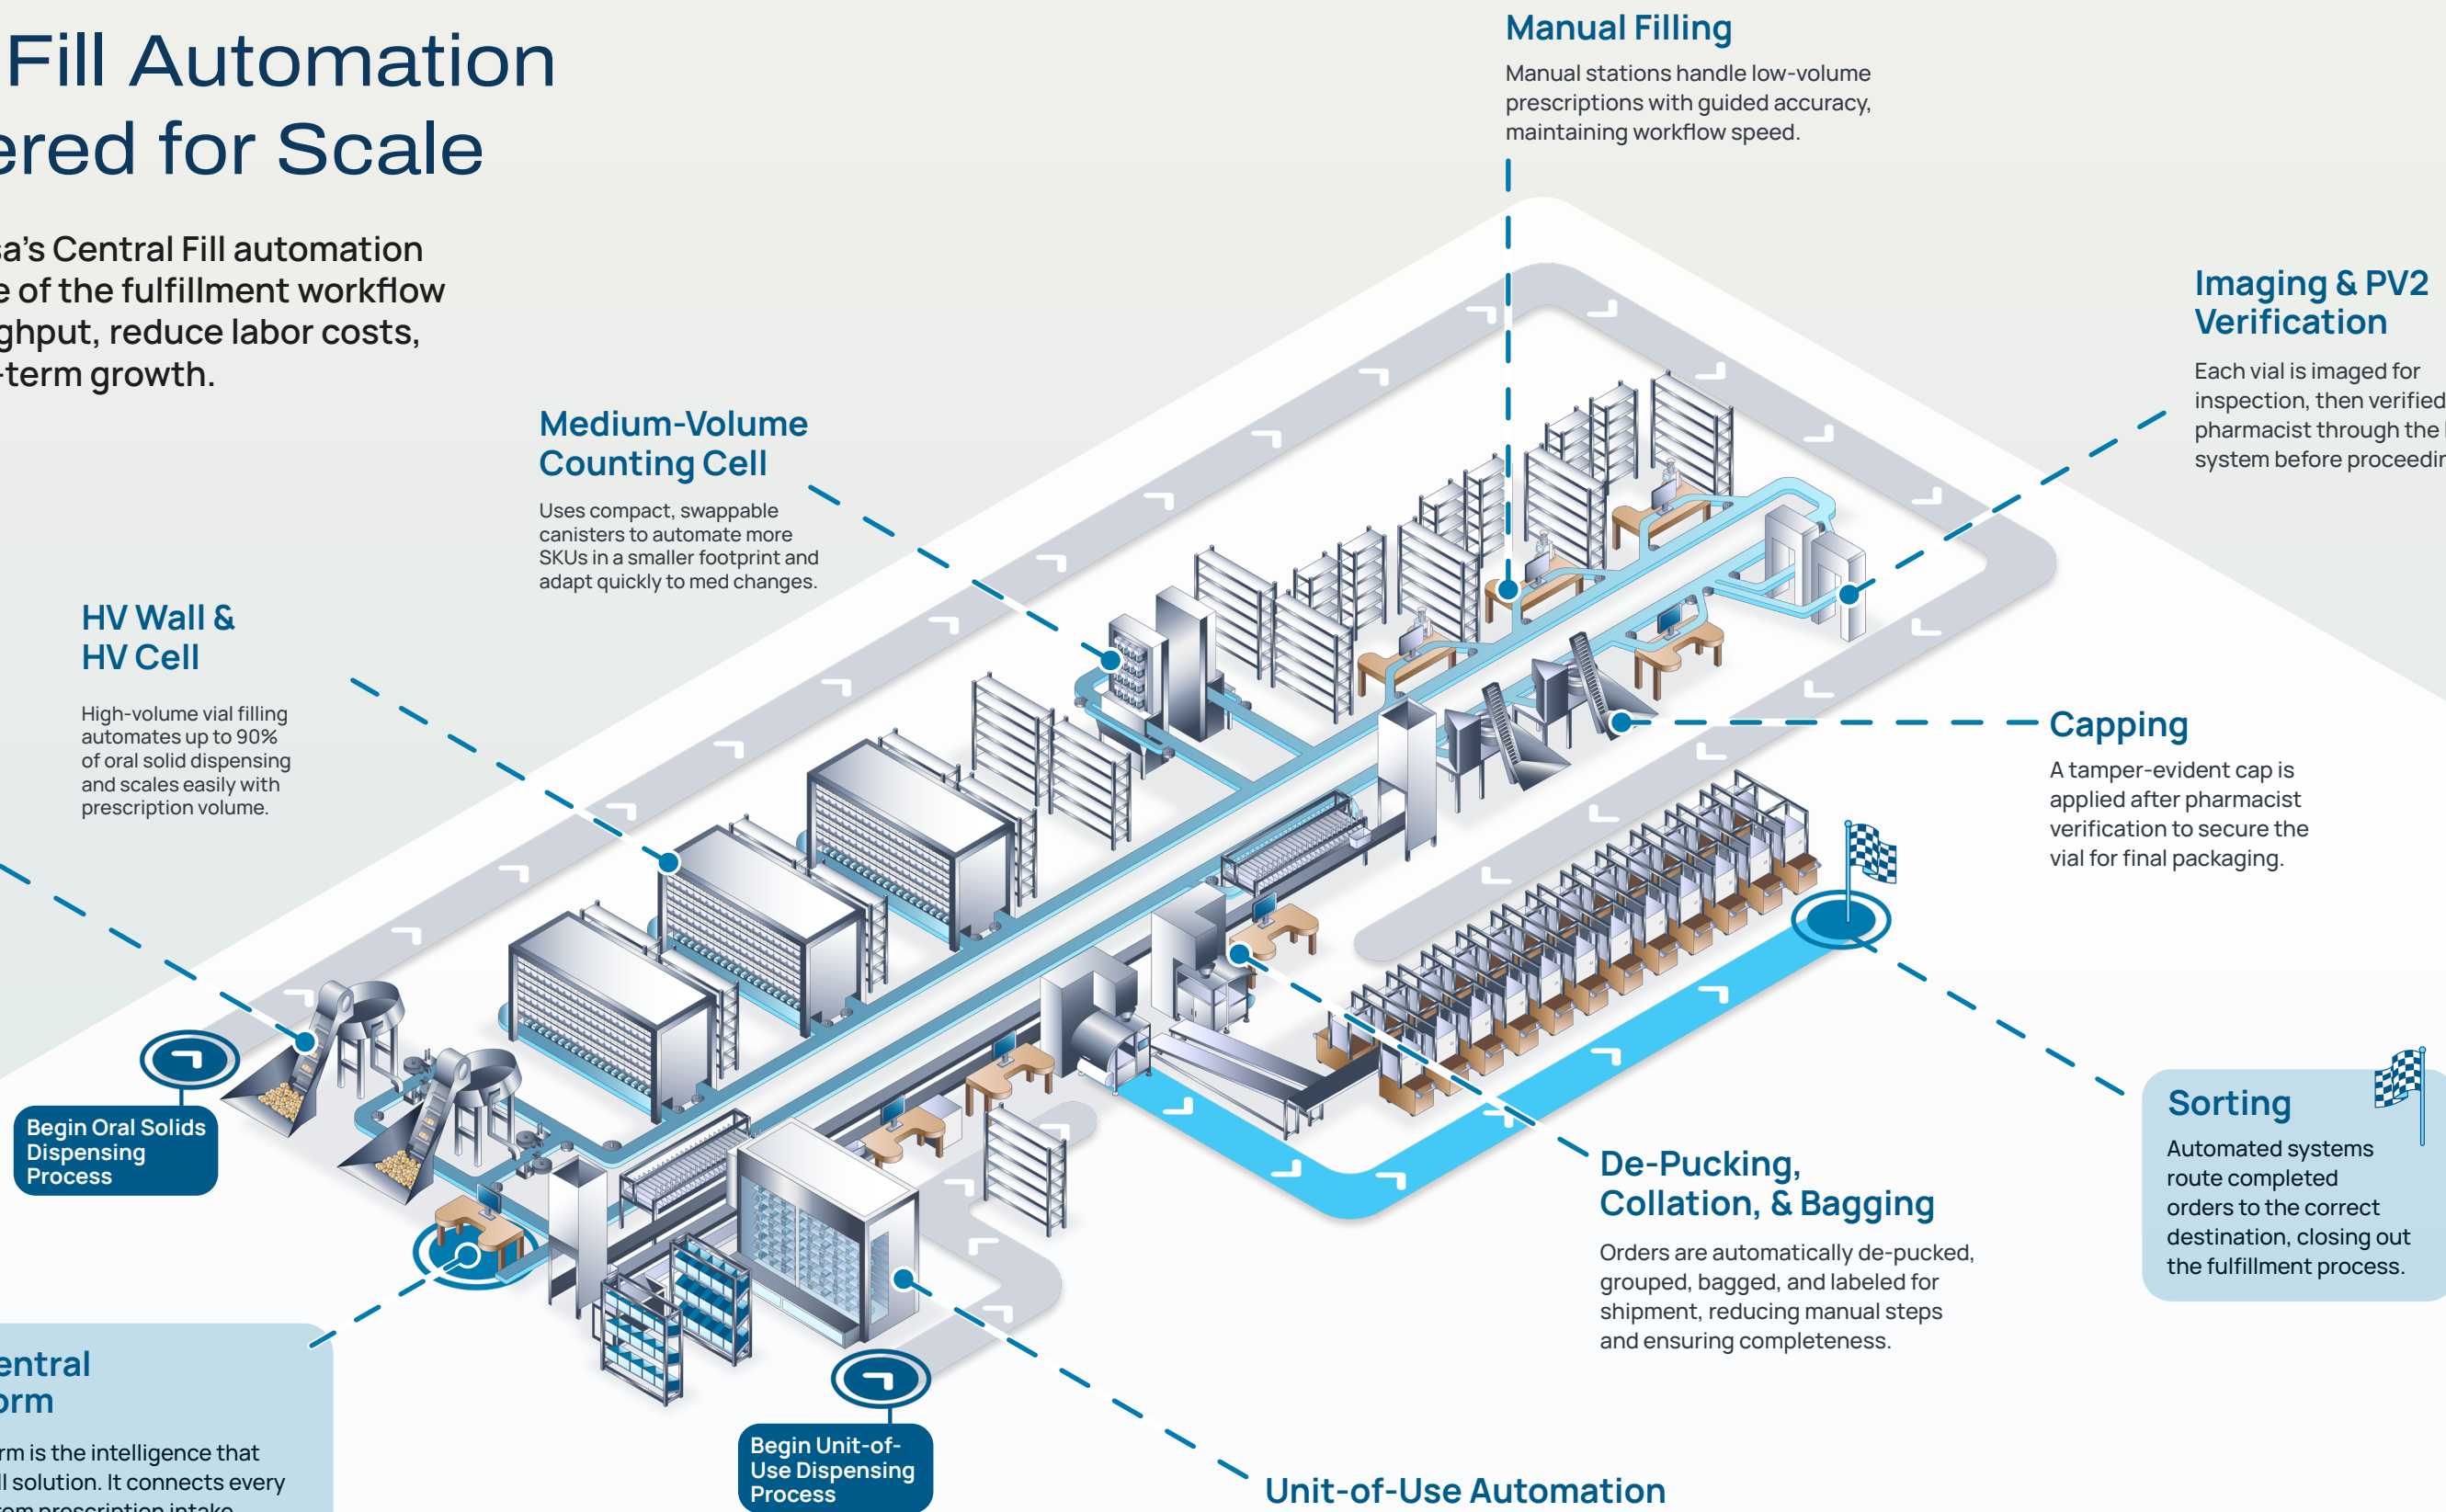

Automated systems route completed orders to the correct destination, closing out the fulfillment process.

Unit-of-Use Automation

Automates the dispensing of pre-packaged medications—including cold chain products—eliminating manual handling and reducing labor demands.

Axona Central Fill Platform

Axona Central Fill Platform is the intelligence that drives Capsa's central fill solution. It connects every system and process — from prescription intake to final verification — routing each order to the most efficient path across high-volume, medium-volume, manual fill, and unit-of-use automation.

550,000+

Scripts dispensed daily via Capsa Healthcare automation, purpose-built for central fill

3.55

3.55 scripts-per-square foot
vs. 1-1.5 industry norm

80%

Automate up to 80% of
unit-of-use dispensing
