INTRODUCTION

Problem Statement

- 🌐 Oncological patients under cytotoxic treatment that present fever have an average time of antibiotics administration of 11h (median 4h07') when admitted and identified at the Emergency Room Service @ HUCA due to diverse causes
 - International guidelines recommend antibiotic administration in the 1st hour: "The golden hour".

Area IV + Includes area VI

Centralized therapies @ HUCA:
CNS, Sarcomas, Neuroendocrine, Melanoma

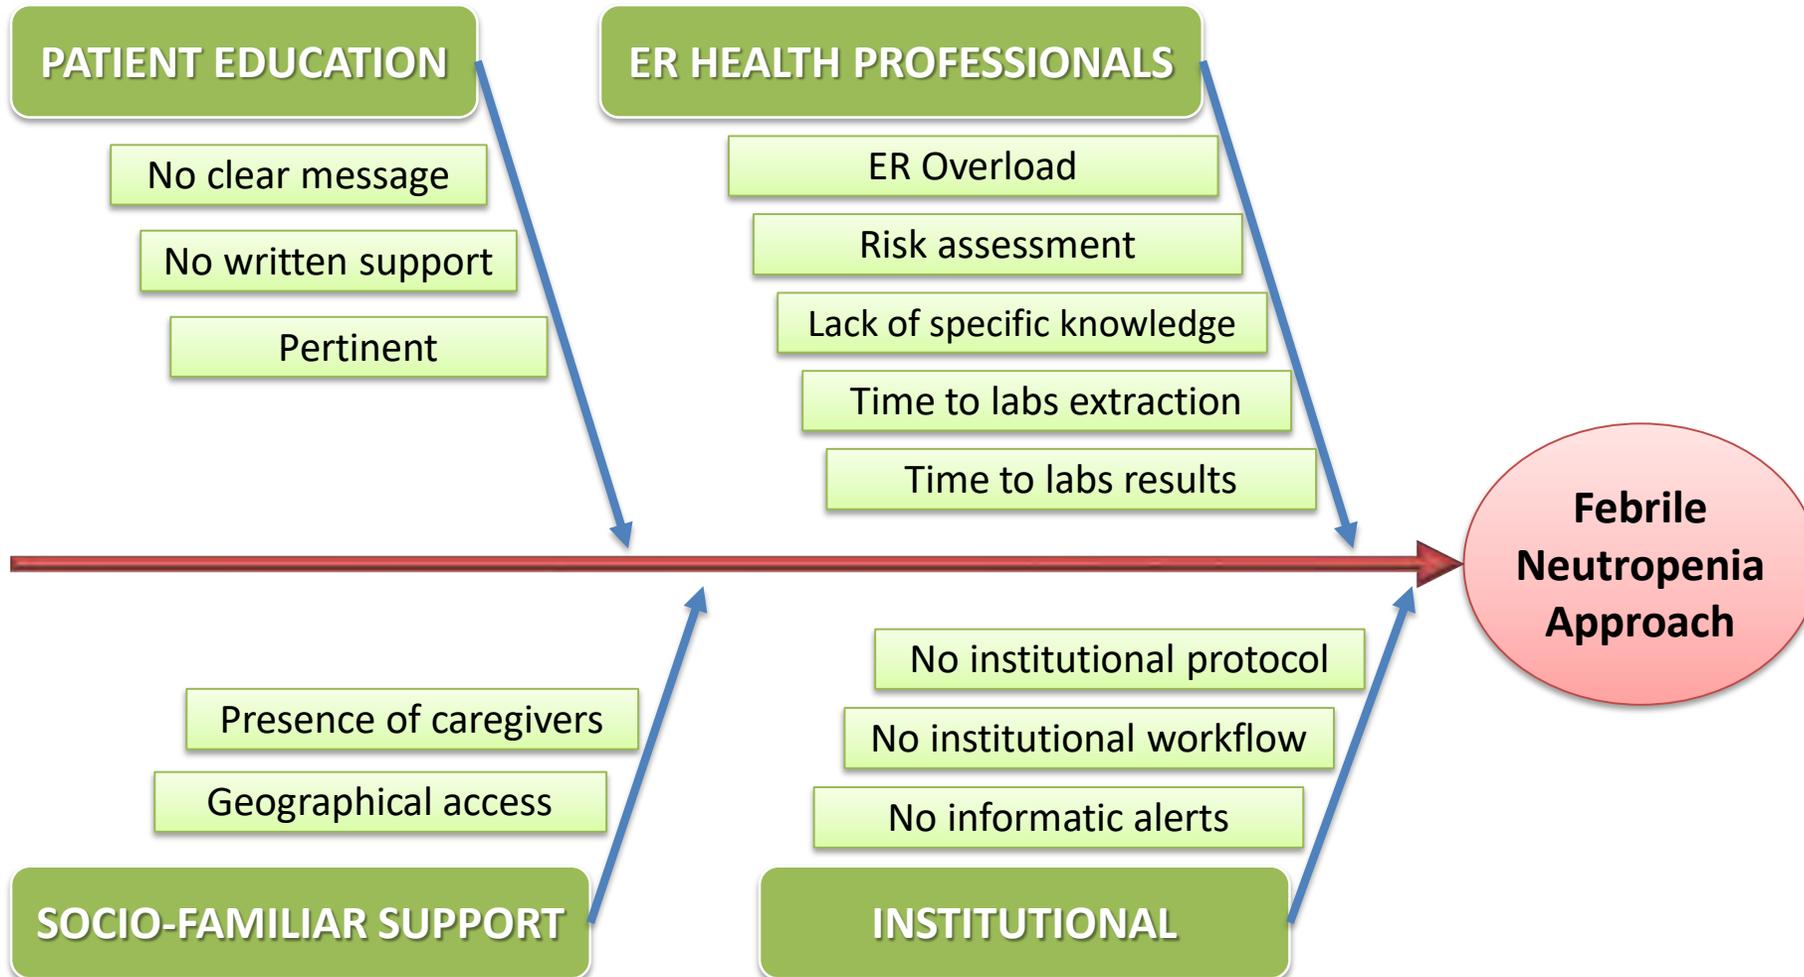

Institutional Overview

2018 Statistics	
New visits	1950
Daily patients (mean)	150
Daily Day Hospital treatments (mean)	90
Inpatients (31 beds)	Average stay 11 days
Total number of Febrile Neutropenia inpatients	148 in 2018 Average stay >11 days

Team Members

Position	Who?
Project Sponsor	SESPA – HUCA (institution)
Project Responsible	Dr. Emilio Esteban González - Medical Oncology Chief
Team Leader	Dr. M ^a Pilar Solis Hernandez – Medical Oncologist
Team Members	Eva Pérez Pertierra – Nurse Supervisor DCH Ana García Álvarez – Outpatient Clinic Nurse
Other members	Medical oncology staff Medical fellows Administrative assistants
Other Services	Emergency Room ER Chief: Dr. Antuña ER staff: Leaders Dr. Herrero & Dr. Rubianes ER Nurses ER Trainees
Patient/Caregivers	a specific survey will be conducted

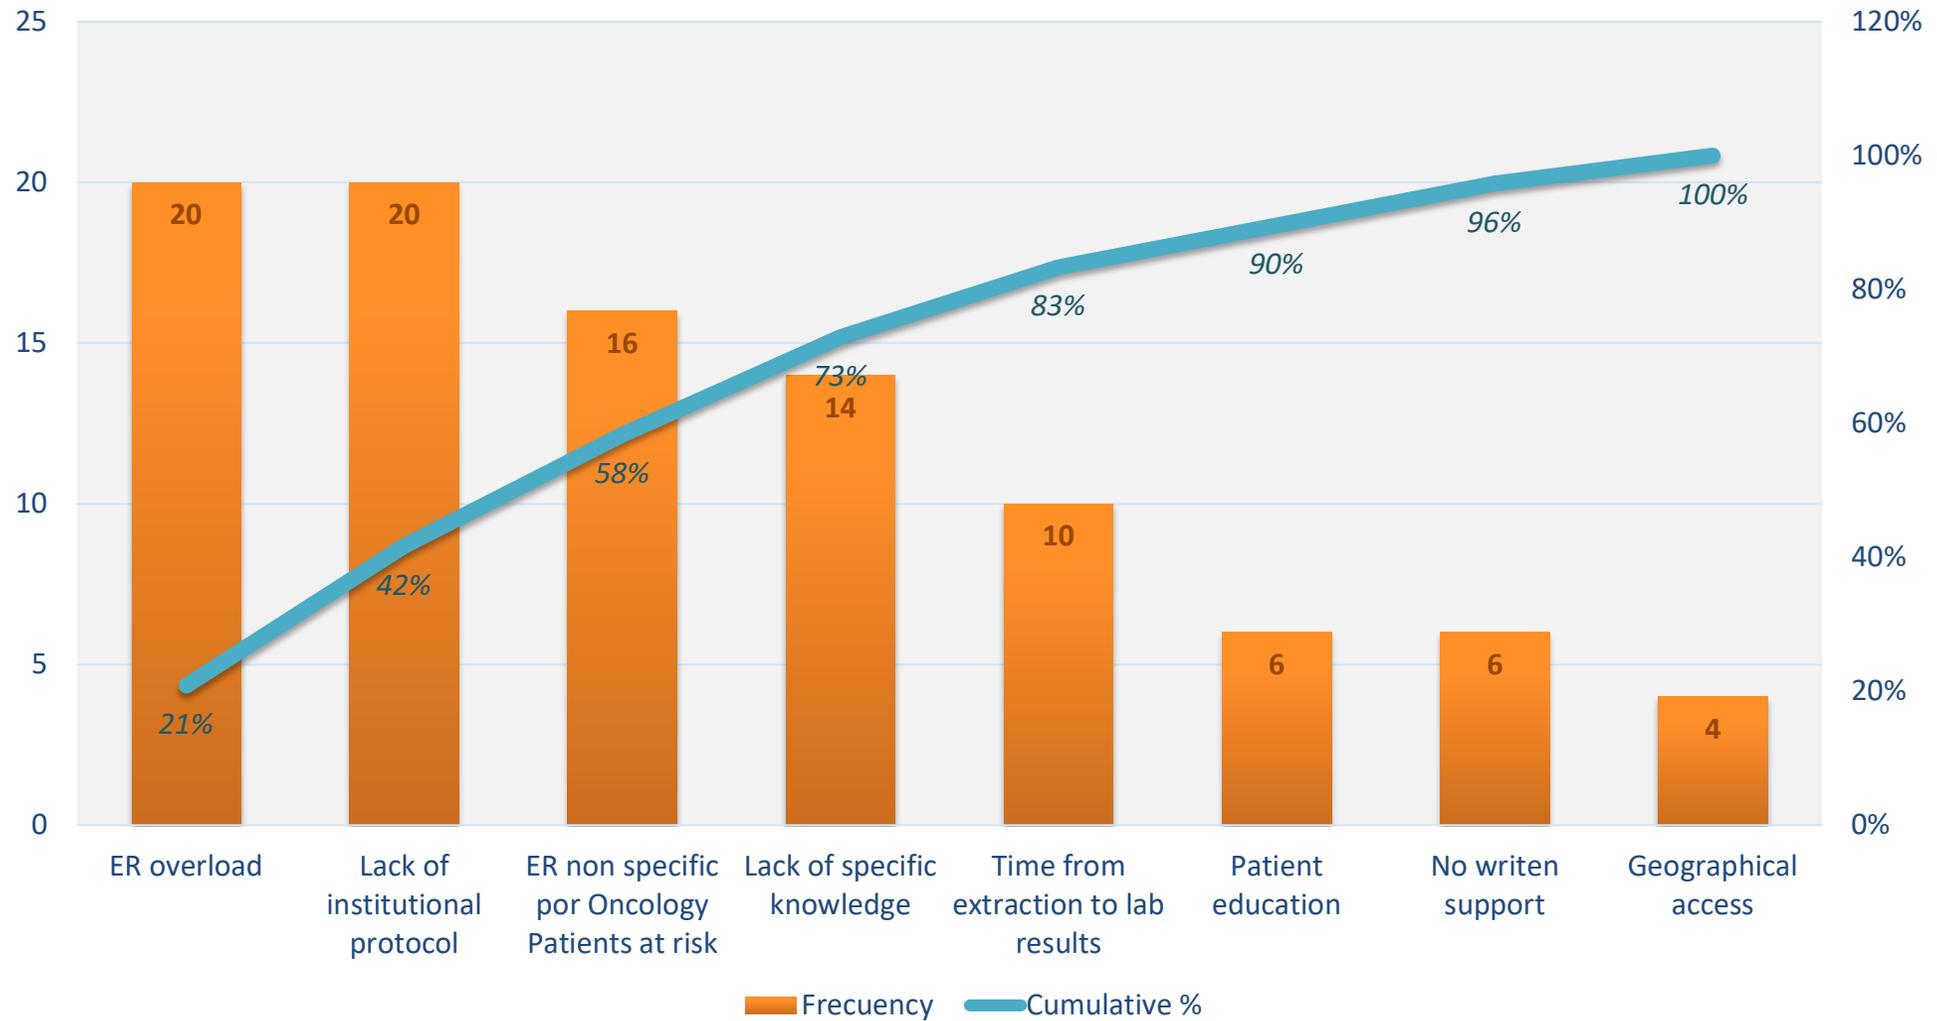

Cause & Effect Diagram

Aim Statement

- 🌈 Antibiotic administration start during the first hour from admission in 90% of Medical Oncology patients receiving chemotherapy regimens with high risk for Febrile Neutropenia, when presenting fever or under FN suspicion @ ER.
 - Reduction in the time to first antibiotic administration to:
 - 90% <1 hour from admission

Diagnostic Data

Measures

Measure:

- *Time from the patient's admission to administration of antibiotic treatment.*
- *Number of visits to ER with fever*
- *Number of inpatients with Febrile Neutropenia diagnosis*
- *Average stay of inpatients with Febrile Neutropenia diagnosis*

Patient population:

- *Patients with solid tumors under cytotoxic treatment*
- *No exclusion as it is considered an EMERGENCY*

Calculation methodology:

Data source:

- *Informatics (list)*
- *Clinical records (time of admission and time of antibiotic administration)*

Data collection frequency:

- *Trimestral*

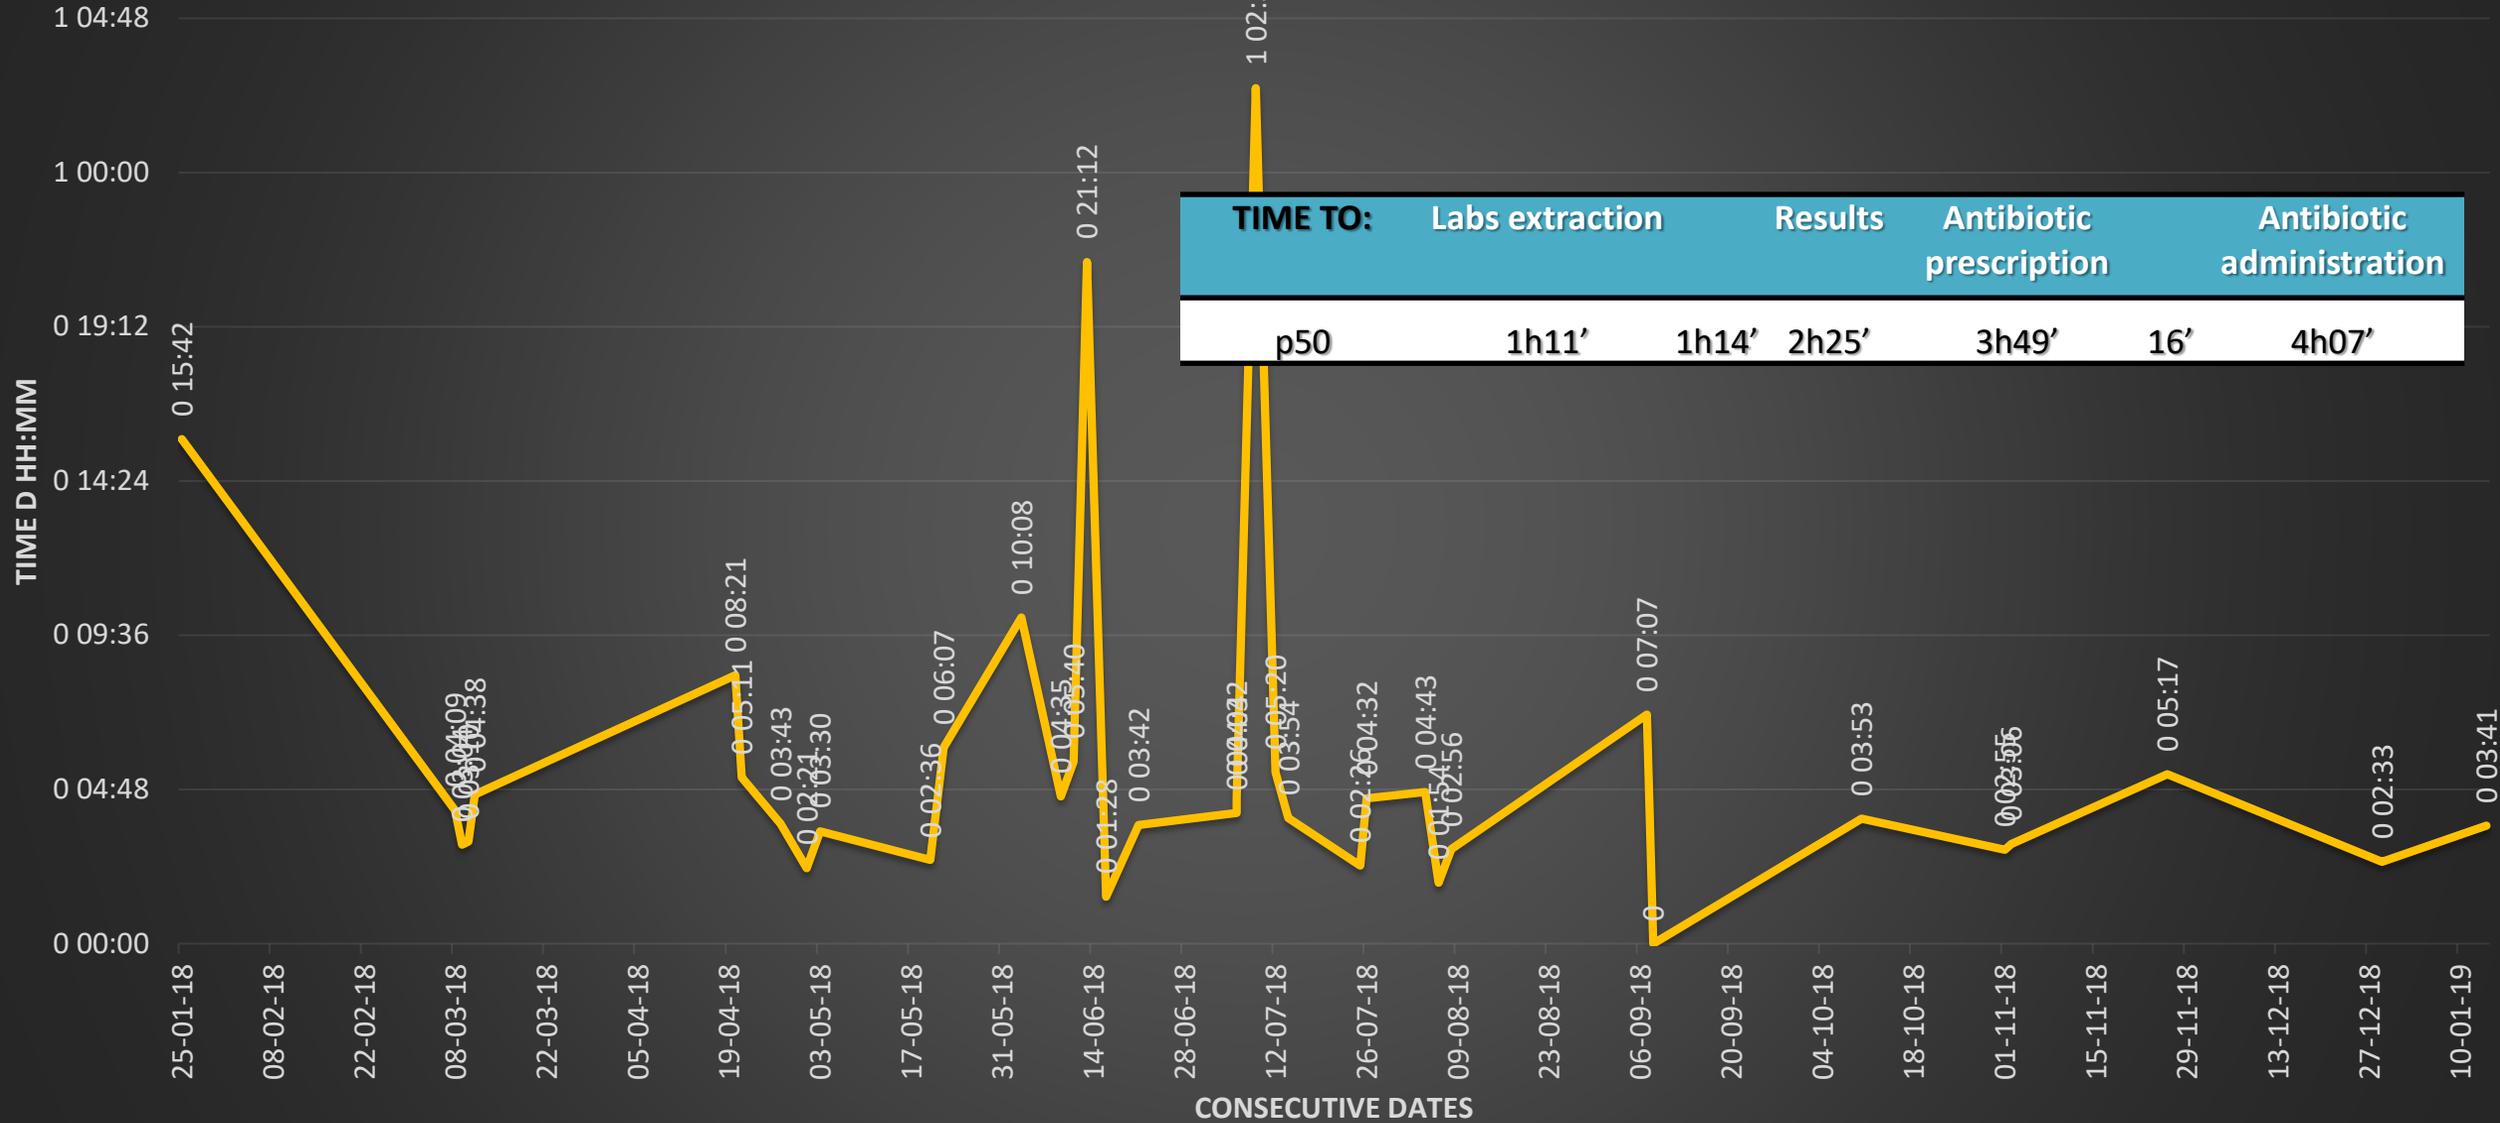

Data quality(any limitations):

- *Record of the diagnostic in a section not stipulated by the electronic clinical record or discharge inform.*

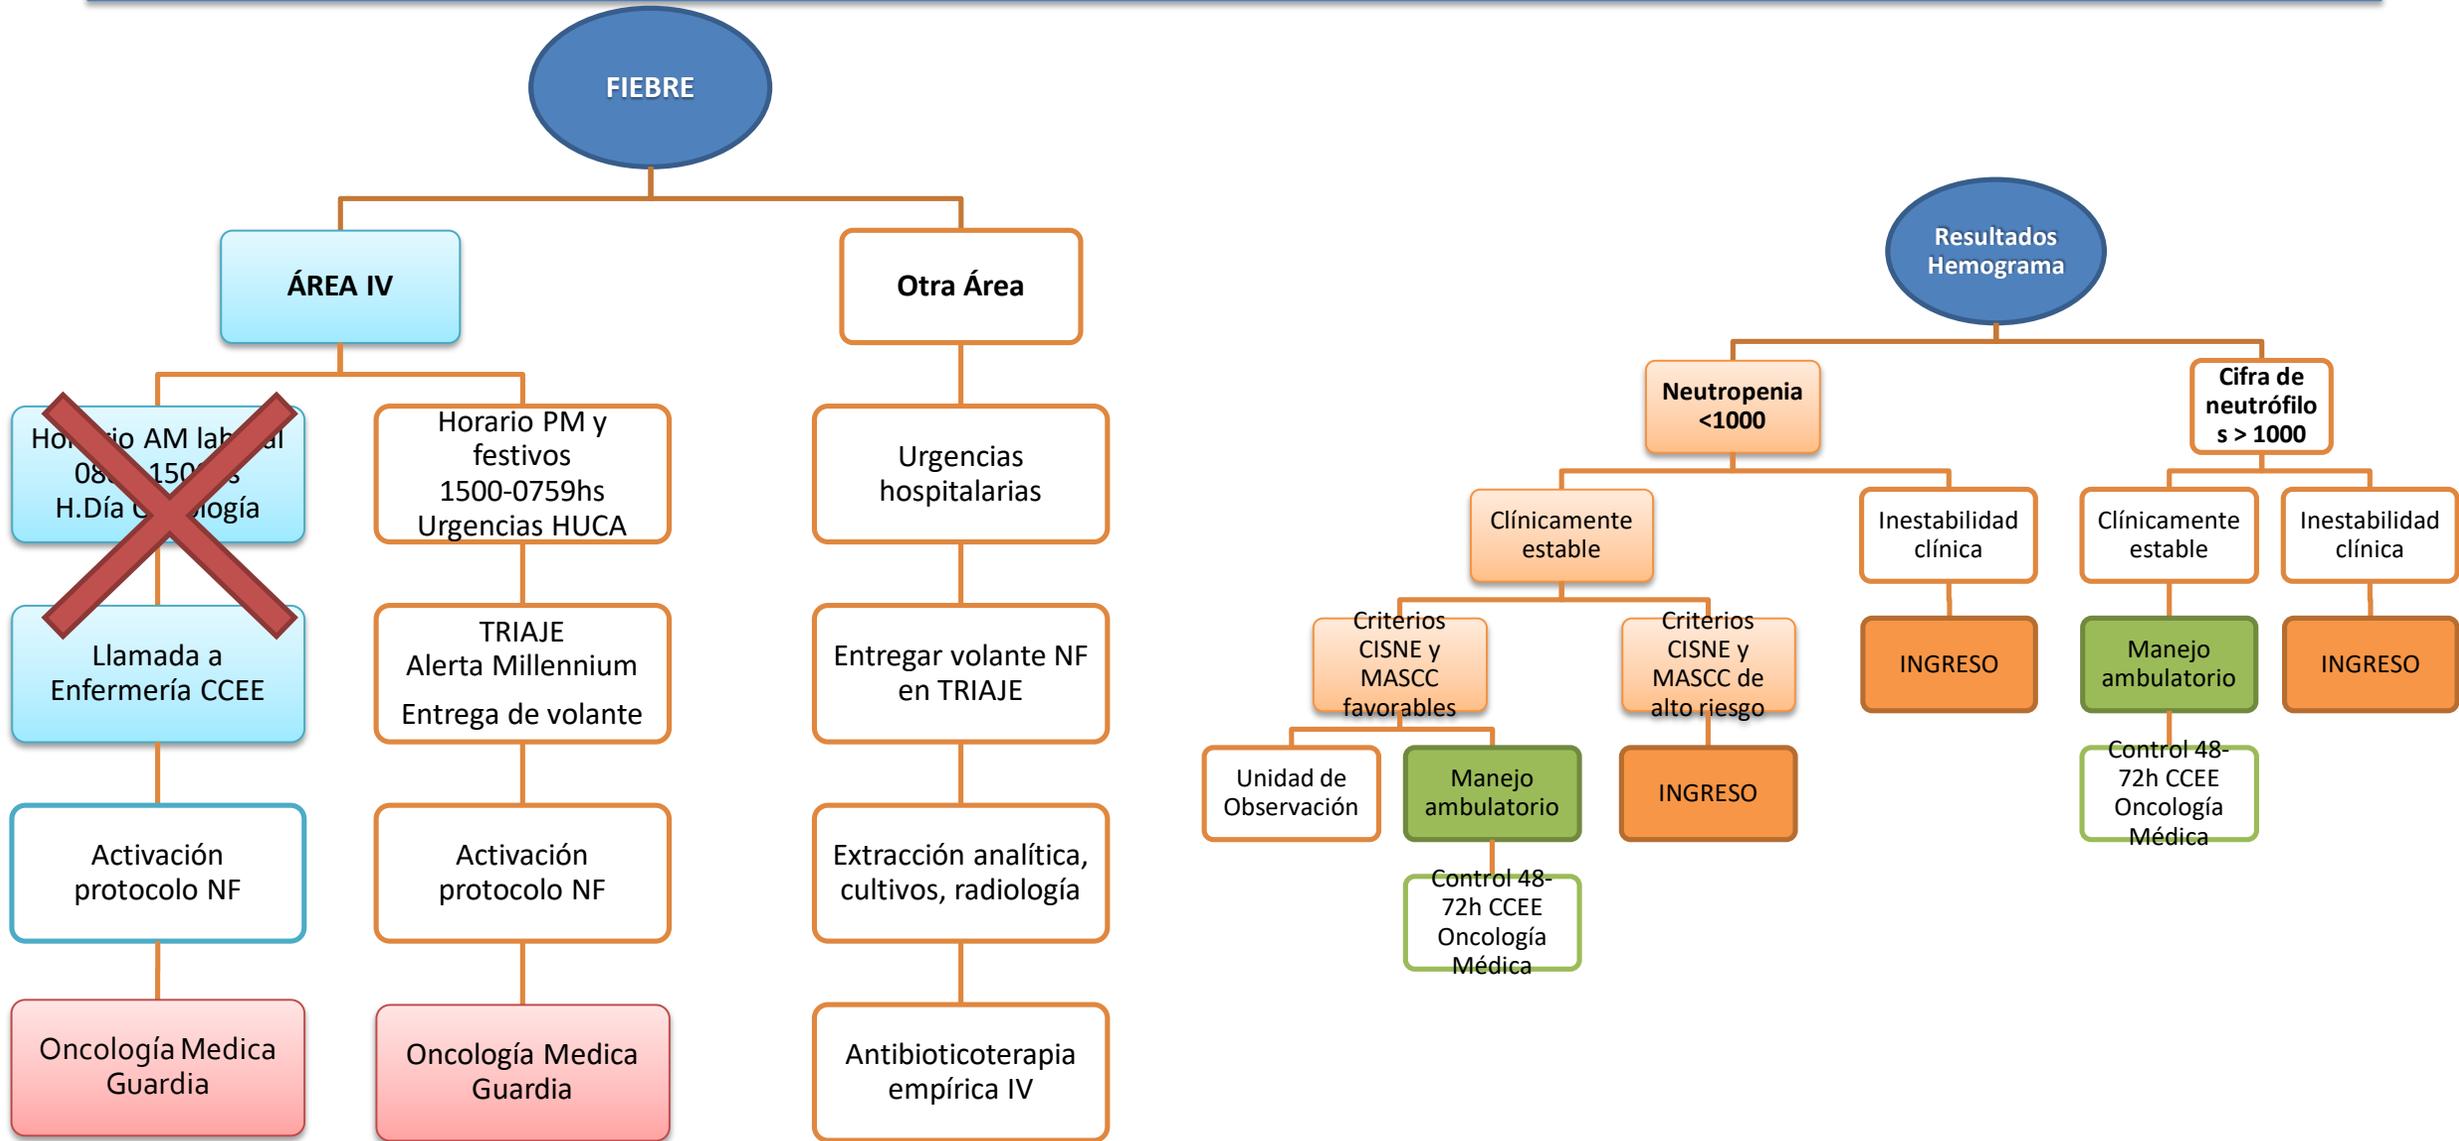

Baseline Data

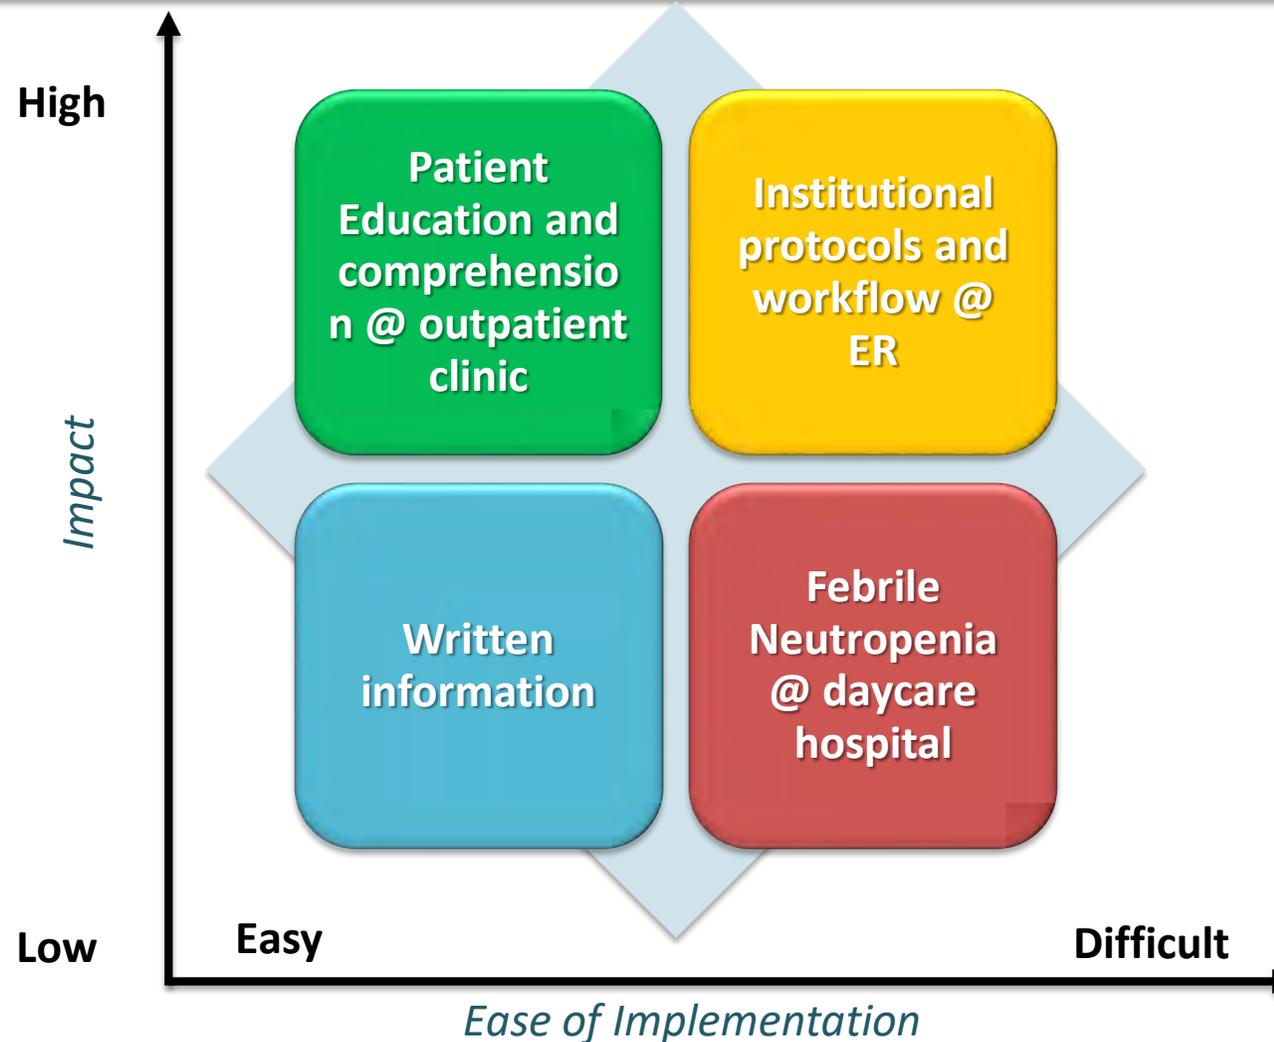

TIME TO ANTIBIOTICS ADMINISTRATION

Initial approach proposed

Prioritized List of Changes (Priority/Pay –Off Matrix)

PDSA Plan (Test of Change)

	Cambios que deben ponerse a prueba e implementarse para alcanzar el objetivo	Medidas para supervisar los avances	
1	Proposed protocol of care in HDO for patients with fever and high risk of neutropenia	Review of Processes activated from the beginning of the implementation	
2	Creation of the flow of patients at risk of febrile neutropenia agreed with Medical Oncology and Emergency.	Randomized review of 5 clinical histories with schemes with high risk of NF. Monthly	
3	Creation of the process "PRO ONM Febrile Neutropenia" in the CERNER-Millennium® computer tool through its FirstNET and PowerChart applications.		Number of emergency visits of patients at risk of febrile neutropenia Total number of activations of the process in the Sº de Urgencias (URG).
4	Timely labeling of the population at risk by creating the LABEL transepisode indicating that it is a patient with high risk of immunosuppression and development of febrile neutropenia.		Verify that the risk has been labeled with the corresponding mark, otherwise label it.
5	Preparation of educational material for the patient that will be added to the database of the previously indicated applications		Verify that it has been recorded in the story.

Cambio Nº	Fechas de inicio y fin del ciclo PDSA	Plan para poner a prueba cada cambio/intervención Describe lo que deberá hacer: a. Prepararse para poner a prueba este cambio b. Determinar cómo llevará a cabo la prueba, incluir predicción	Persona Encargada	¿Quién debe involucrarse?	Resumen de los Resultados
1	18-01-19	Argument with current figures of expected daily workload.	Pilar Solís ^{ONM} Eva Pérez ^{HDO}	Nurses HDO + Supervisor Jefe de Servicio	The possibility of attention was explored with HDO nursing and the proposal was rejected, with the reason of scarce human resources
2	01-02-19 a 22-02-19	Interaction with the emergency service in order to refine the process so that it is more agile for both services.	Pilar Solís ^{ONM}	Jefes Sº de URG y ONM Informática ^{Cerner}	The patient at risk was defined. The patient flow was built.
3	15-02-19 a 20-02-19	Periodic meetings with Cerner-Millennium® emergency and maintenance services. Exploration in initial "test environment", then for a specific user profile and finally	Pilar Solís ^{ONM}	Franz Jimeno ^{Cerner} P.Herrero ^{URG} P.Rubianes ^{URG}	The indication of the process that includes care, analytics, microbiology and antibiotic therapy was created.
4	15-02-19	In the weekly sessions of the service the relevance and importance of the process is instructed and remembered. Physicians will be supported for the proper identification of patients.	Pilar Solís ^{ONM}	Oncólogos Médicos	Activated and initiated the labeling of patients at risk of NF
5	15-02-19	Provide a paper version of the Febrile Neutropenia Process, to be delivered to the Emergency Department in case of Fever in the 6 weeks after the last dose.	Pilar Solís ^{ONM}	Oncología Médica Facultativos y Enfermería	It was sent to reprography, and was added to the Patient Education component. Patients have a priority attention in the emergency department.

Outpatient Management of Fever and Neutropenia in Adults Treated for Malignancy: American Society of Clinical Oncology and Infectious Diseases Society of America Clinical Practice Guideline Update

Randy A. Taplitz, Erin B. Kennedy, Eric J. Bow, Jennie Crews, Charise Gleason, Douglas K. Hawley, Amelia A. Langston, Loretta J. Nastoupil, Michelle Rajotte, Kenneth Rolston, Lynne Strasfeld, and Christopher R. Flowers

A B S T R A C T

Purpose

To provide an updated joint ASCO/Infectious Diseases Society of American (IDSA) guideline on outpatient management of fever and neutropenia in patients with cancer.

Methods

ASCO and IDSA convened an Update Expert Panel and conducted a systematic review of relevant studies. The guideline recommendations were based on the review of evidence by the Expert Panel.

Results

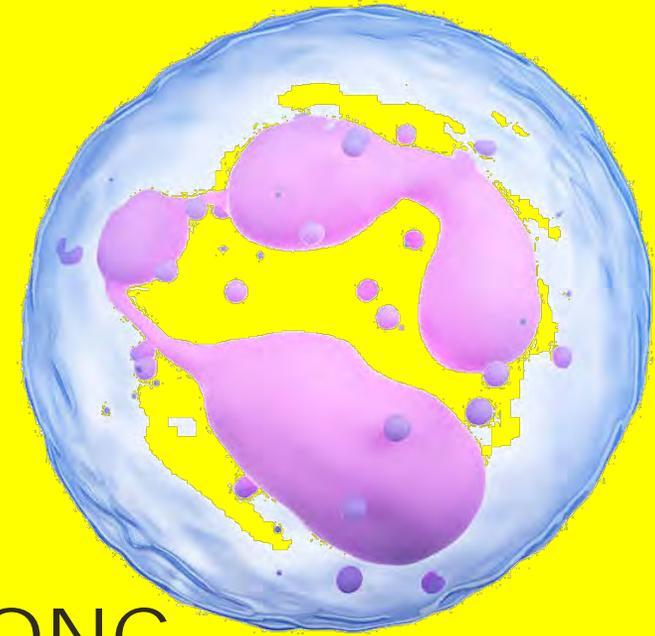

Six new or updated meta-analyses and six new primary studies were added to the updated systematic review.

Recommendation

Clinical judgment is recommended when determining which patients are candidates for outpatient management, using clinical criteria or a validated tool such as the Multinational Association of Support Care in Cancer risk index. In addition, psychosocial and logistic considerations are outlined within the guideline. The panel continued to endorse consensus recommendations from the previous version of this guideline that patients with febrile neutropenia receive initial doses of empirical antibacterial therapy within 1 hour of triage and be monitored for ≥ 4 hours before discharge. An oral fluoroquinolone plus amoxicillin/clavulanate (or clindamycin, if penicillin allergic) is recommended as empirical outpatient therapy, unless fluoroquinolone prophylaxis was used before fever developed. Patients who do not defervesce after 2 to 3 days of an initial, empirical, broad-spectrum antibiotic regimen should be re-evaluated and considered as candidates for inpatient treatment.

LABEL

Medical oncologist will activate this label when 1st indicated high FN risk chemotherapy and it will be disabled by the system after 6 weeks from the last dose.

WRITTEN EDUCATION

Se entregará a los pacientes con alto riesgo de neutropenia por esquema y/o factores adicionales.

Sº de Urgencias & Sº de Oncología Médica

Protocolo Neutropenia Febril

Si se le ha entregado este volante, es porque usted está recibiendo un tratamiento que le pone en riesgo de bajada de las defensas que puede dejarle más vulnerable a las infecciones.

Si ha recibido quimioterapia en las últimas 6 semanas

Si tiene fiebre mayor o igual a 38°C

- Tome un antitérmico (p. ej. paracetamol)
- Diríjase al servicio de Urgencias más cercano
 - Comprobarán sus antecedentes
 - Activarán el protocolo de Paciente en riesgo de Neutropenia Febril

Start!

CISNE  **CLINICAL INDEX OF STABLE FEBRILE NEUTROPENIA**

Welcome to the **Official** CISNE calculator app! The aim of this tool is to identify those patients with febrile neutropenia who are seemingly stable in the first hours and who throughout the evolution of their febrile process develop serious, unexpected complications and who, therefore, despite the initial lack of evident criteria of severity, are not truly stable.

Change Data

Conclusions

- 🌈 Patients with Febrile Neutropenia risk will be attended at the ER Service through the new optimized protocol and process.
- 🌈 Day Care Hospital declared itself to be insufficient in material and human resources for the reception of the patient at risk of febrile neutropenia.
 - Nurses consensus and declination of initial proposal.

Next Steps/Plan for Sustainability

 Trimestral analysis

 Education

- Health care professionals
- Patient & caregivers

Antibiotic Administration Time Decrease in Urgent Care of Medical Oncology Service being treated with Neutropenic Regimens

AIM: Antibiotic administration start during the first hour from admission in 90% of Medical Oncology patients receiving chemotherapy regimens with high risk for Febrile Neutropenia, when presenting fever or under FN suspicion @ ER.

INTERVENTION:

- In order to reduce the time of antibiotic start in immunosuppressed patients when Febrile Neutropenia suspected at the ER service, it was built a workflow that includes patient tag with a specific specific label indicated by the oncologist.
- The patient will receive pertinent written and oral education
- When the patient presents fever and is directed to the ER, once admitted ad “patient at immunosuppression risk” by the Manchester Triage System and rated "very urgent attention“, a special symbol will appear in the patient list and a task will be generated, so ER staff can easily identify this patients, and evaluate them with due priority.
- Additionally, an informatic alert will appear once the history is open.
-

TEAM:

- Medical Oncology: names
Emilio Esteban
Pilar Solís
- Emergency Room:
Luis Antuña
- Informática:
Francisco Jimeno

PROJECT SPONSORS:

- HUCA – SESPA (institution)
-

RESULTS: Our AIM has not been assessed due to short period from implementation

CONCLUSIONS:

- Our AIM has not been assessed due to short period from implementation
- Processes can vary their shape and goals during their development due to diverse causes and actors.

NEXT STEPS:

- Trimestral analysis
- Education
 - Health professionals
 - Patient & caregivers
