# What Is Assessed in Reading?

Reading skills are assessed in six key domains on the *i-Ready Diagnostic* for Reading. Those six domains are:

- Phonological Awareness
- Phonics
- High-Frequency Words
- Vocabulary
- Comprehension: Literature
- Comprehension: Informational Text

Students are assessed in the domains that are most relevant to informing instruction at their grade level. Additional information on which domains are covered at which grade levels is available in the [i-Ready Diagnostic FAQ on reading test flows](#).

On the *i-Ready Diagnostic* for Reading, students are assessed with three types of items:

## Multiple Choice

Lions and tigers are cats.  
They both have loud roars.  
The lion has brown fur.  
The tiger has orange and white fur.  
The tiger also has black stripes.

How are lions and tigers the SAME?

Both are brown. Both have stripes. Both can roar.

Both are brown. Both have stripes. Both can roar.

## Drag-and-Drop

Read each sentence below from **Passage 1**. Drag ONE phrase to EACH box to explain the author's purpose for including each sentence.

"Hats are an interesting part of history."

"The very first hat was probably just a big leaf or a piece of leather."

to provide a fun fact  
to describe an example  
to introduce the main idea  
to get the reader to do something

## Highlight Text

On hot days, they provide protection from the sun. That's why people started wearing hats—for comfort and safety. Hard hats, for instance, protect construction workers who may be hurt by falling tools or building materials. Helmets have helped football players, bike riders, and rock climbers stay safe.

Hats also allow people to express themselves. Wearing a baseball cap is the easiest way to remind people of your favorite city, sports team, or special saying. One person may wear

In **Passage 2**, reread the underlined sentences on pages 1–3. Click or tap the sentence that tells the author's opinion.

In **Passage 2**, reread the underlined sentences on pages 1–3. Click or tap the sentence that tells the author's opinion.

On hot days, they provide protection from the sun. That's why people started wearing hats—for comfort

For more specific information on skills assessed by grade level in Reading, click [here](#).

# Phonological Awareness

Phonological awareness is the understanding that a spoken word is made up of different parts, and each of these parts makes a sound. For example, the word *bat* includes the sounds /b/, /a/, and /t/, and the word *batter* can be broken into two syllables that make the sounds /bat/ and /ter/. Phonological awareness is an important building block for phonics. Readers need to be able to distinguish, or make out, the individual sounds in spoken words before they can fully master matching sounds to letters.

In the *i-Ready Diagnostic*, assessment items use both audio and visual cues to assess whether a student can distinguish and manipulate the sounds in spoken language. The stems, which comprise questions or directions, are read aloud to students, as are the individual answer choices. Students can use an audio icon to hear the items and answer choices repeated. Students are asked to segment and blend syllables, onset and rime, and individual phonemes. Other items assess whether a student can manipulate phonemes by deleting, adding, or substituting sounds in spoken words.

## Assessed Skills

On the *i-Ready Diagnostic* for Reading, phonological awareness is assessed for Grades K–1. Some of the important skills assessed in the Phonological Awareness domain include:

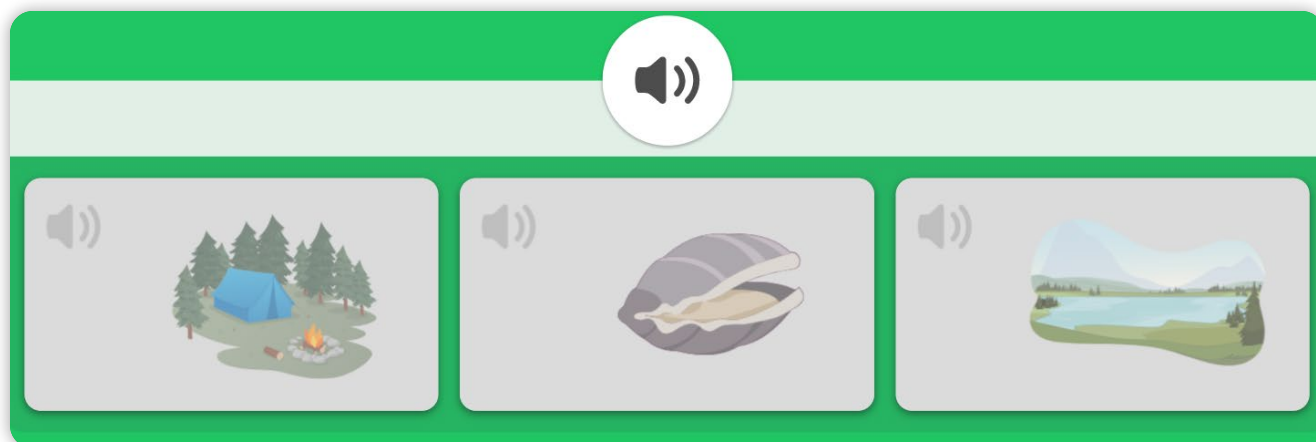

- Rhyme Recognition
- Syllable Blending and Segmenting
- Onset and Rime Blending and Segmenting
- Phoneme Identification and Isolation
- Phoneme Blending and Segmentation
- Phoneme Addition, Deletion, and Substitution

## Sample Items

**Grade K:** In this example, audio is played and says, “Find the first sound in the word *bus*.” Students must select the correct order of the sounds /b/, /u/, /s/. This is an example of a Phonological Awareness item that assesses initial phoneme isolation.

## Phonological Awareness (Cont'd.)

**Grade 1:** In this example, audio is played and says, "Say *lamb*. Now add /k/ to the beginning. What's the new word?" This item assesses a student's capability to add initial single-consonant sounds to words. The student creates a word of four or more phonemes with a blend. This is an example of a Phonological Awareness item that assesses manipulation through addition.

# Phonics

Phonics instruction teaches students how to connect the sounds they hear in spoken words to the letters they see in written words. Students have to learn many different connections between sounds and spelling patterns. In fact, there are so many connections that learning phonics can feel like learning the rules to understand a hidden code. But this skill is mastered by taking one step at a time, learning one rule and then another, and so on. Once students can make these connections quickly and easily, they can really start to read for meaning.

*i-Ready Diagnostic* assesses a student's proficiency in recognizing sound-spelling correspondences. Test items use both audio and visual support. Some items that comprise questions or directions are read aloud, and students are asked to choose among written answer choices. Other items are written, and students are asked to choose among answer choices that are read aloud. As in Phonological Awareness, students can use an audio icon to hear the items and answer choices repeated. Many items are supported by art. Items focus on a range of high-utility skills, including letter recognition, one-to-one letter-sound correspondences, CVC words, consonant blends, consonant digraphs, final *e* conventions, *r*-controlled vowels, inflectional endings, vowel teams (i.e., digraphs and diphthongs), two-, three-, four-, and five-syllable words, and words with prefixes/suffixes.

## Assessed Skills

On the *i-Ready Diagnostic* for Reading, phonics is assessed for Grades K–2. Some of the important skills addressed in the Phonics domain include:

- Alphabetic Knowledge
  - Letter recognition
  - Letter-sound correspondence
- Sound Spellings
  - Short and long vowels
  - *r*-controlled vowels
  - Digraphs and diphthongs
- Decoding Multisyllable Words and Encoding
  - Multisyllable decoding strategies
  - Words with prefixes
  - Words with suffixes
- Decoding/Encoding/Sorting Multisyllable Words

## Phonics (Cont'd.)

## Sample Items

**Grade K:** In the above example, audio is played and says, “Which letter has the sound /i/?” (i.e., short /i/ sound). This item measures proficiency in associating the long vowel sound /i/ with the appropriate grapheme. This is an example of a Phonics item that measures alphabetic knowledge.

**Grade 2:** In the above example, students listen to spoken directions and are asked to find the word *balloon*. This item measures proficiency with decoding grade-level sound spellings, including multisyllabic constructions and the sound /oo/. This is an example of a Phonics item that measures the decoding of multisyllable words.

**Grade 2:** In the above example, students listen to spoken directions and are asked to choose the word *helmet*.

# High-Frequency Words

High-frequency words are the words that appear most often in what students read. Words such as *the*, *and*, and *it* are high-frequency words. Because these words appear so often, readers ought to learn to recognize them automatically. Also, these words are often spelled in ways that can be confusing. Words such as *could* and *there* do not follow the rules that connect sounds to letters in most words. Learning to recognize these words automatically helps students read more quickly and easily, which gives them a better opportunity to understand what they are reading.

Words assessed and taught in the *i-Ready Diagnostic* and Personalized Instruction are drawn from the Dolch Basic Word List (Dolch, 1941), the Fry Instant Word List (Fry, 1999), and the Educator’s Word Frequency Guide (Zeno et al., 1995). Items in the *i-Ready Diagnostic* assess students’ ability to recognize high-frequency words. Some item stems that comprise questions or directions are read aloud, and students are asked to choose among written answer choices. Other item stems are written, and students are asked to choose among answer choices that are read aloud. Students can use an audio icon to hear the items and answer choices repeated.

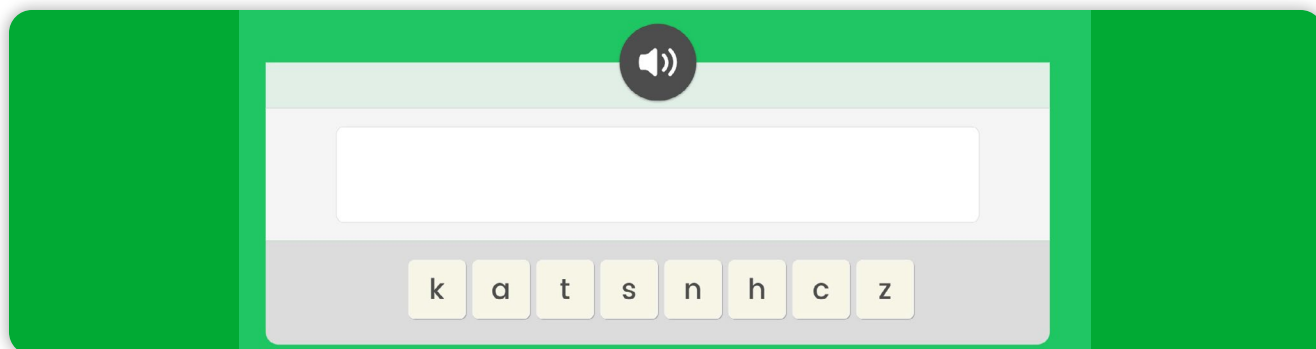

## Assessed Skills

On the *i-Ready Diagnostic* for Reading, the domain of High-Frequency Words comprises words from the Dolch, Fry, and Zeno word lists.

## Sample Items

**Grade 1:** In the above example, students hear the word, then choose the word that matches the spoken word. This item measures students’ proficiency in recognizing a familiar word (e.g., *who*) among words with similar phonological elements.

**Grade 2:** In the above example, the audio prompt asks the students to “move the letters to correctly spell the word *thanks*.” This item measures students’ proficiency in spelling grade-appropriate high-frequency words.

# Vocabulary

Vocabulary is the name for the words a student knows. The more words a student knows, the easier it is to understand what the student reads. Good readers know the meanings of many words. Students grow their vocabularies by hearing and reading new words, talking about words, and being taught specific words.

Test items in the *i-Ready Diagnostic* assess students' knowledge of both Tier 2 words (i.e., academic or literary) and Tier 3 words (i.e., domain-specific or content-area words). Panels of teachers and reading specialists selected the words to be assessed using research-based lists that included:

- *Words Worth Teaching* (Biemiller, 2010)
- *The Educator's Word Frequency Guide* (Zeno et al., 1995)
- *The Living Word Vocabulary* (Dale & O'Rourke, 1981)
- *An Academic Word List* (Coxhead, 2000)

The panels made these selections to reflect the types of words students learn in various disciplines at different grade levels and in various stages of their lives. Test items assess knowledge of these words in context, and those aimed at early readers include visual support. Because oral vocabulary is a critical part of reading development, test items for Grades K–2 are supported by audio.

## Assessed Skills

Some of the important skills addressed in the Vocabulary domain include:

- Understand General Academic and Domain-Specific Vocabulary
- Identify Word Relationships (Synonyms/Antonyms)
- Sort Images That Represent Words into Conceptual Categories
- Determine Word Meaning Using Base Words and Affixes
- Use a Glossary to Determine/Clarify Word Meaning
- Understand Word Families
- Determine Word Meaning Using Greek and Latin Roots and Affixes
- Understand Word Relationships
- Analyze Figurative Language

## Sample Item

Read the paragraph.

The family stood on the railroad platform surrounded by a pile of luggage. The train would transport them all the way across the country. The voyage would take a week, and they were excited to see the sights along the way.

The prefix *trans-* means "across," and the root *port* means "carry." Based on this information, what does the word transport mean in the paragraph?

to move to a another part of the country

to go on a journey to a place far away

to travel for a long amount of time

to bring things from one place to another

**Grade 4:** This item measures students' ability to infer meaning of words by using prefixes and root words.

# Comprehension: Literature

The Comprehension: Literature domain assesses a student’s ability to understand types of writing that are fictional. Fictional literary texts are composed of short stories, plays, and poems. A student who understands literature might identify the sequence of events in a story, discuss the meaning of a poem, or explain the lines a character speaks in a play. As a student develops as a reader, they will be able to understand increasingly complex stories, plays, and poems.

In the *i-Ready Diagnostic*, the Comprehension: Literature domain is assessed using passages written by authors experienced in the literature of the grade, and many of the texts are authentic and previously published. Each passage is associated with a set of items that assess various concepts, but they all require that a student has read and processed the literary passage presented to them in the Diagnostic.

## Assessed Skills

Some of the important skills addressed in the Comprehension: Literature domain include:

- Ask Questions about Stories
- Make Inferences
- Cite Textual Evidence
- Determine Theme/Central Message of a Story/Poem
- Recount or Summarize Story Events
- Understand/Describe Characters, Settings, Events
- Interpret Figurative Language
- Connect Words and Pictures
- Analyze Structure and Elements of Stories/Plays/Poems
- Compare and Contrast Stories
- Interpret Allusions
- Analyze How Plot/Characters Are Developed
- Analyze Word Choice, Impact on Meaning, and Tone
- Analyze Point of View and How It Is Conveyed
- Compare and Contrast Literary Texts and Multimedia Presentations of the Texts

## Sample Item

The sample item interface is displayed on a green background. On the left, a yellow box contains the poem "A Grand Journey". On the right, a white box contains the question and a list of options.

**A Grand Journey**

I wait for children to see me  
as more than a purple balloon.  
I travel through the breezy air.  
The wind and I sing a cheerful tune.

Below me the children all scatter,  
playing their joyful games of fun.  
From above, my heart quietly wishes  
to be included in even just one.

A little red bird flies by me,  
as the clouds fade to gray.  
The sun hides quickly behind them,  
but I keep climbing up, up, and away!

Drag to the box TWO things the balloon does in the poem.

**What the Balloon Does**

:: plays outside    :: grabs a friend  
:: shines brightly    :: sings a song

**Grade 3:** This item measures whether students can identify explicit key details in literary text.

# Comprehension: Informational Text

The Comprehension: Informational Text domain assesses a student's proficiency with understanding types of writing that are usually true. Reading materials, such as articles, recipes, or instructions, are examples of informational text. The texts written in this domain are usually organized using one or more informational text structures. Additionally, they may contain charts, diagrams, and graphs that are important to understanding.

In the *i-Ready Diagnostic*, the Comprehension: Informational Text domain is assessed using passages written by authors experienced with the grade level and carefully selected to be informational while also engaging to students. A student who understands informational text might identify the main idea and supporting details, describe the way the writing is organized, or draw information from a photograph or diagram. Each passage is associated with a set of items that assess various concepts, but all require that a student has read and comprehended the informational passage presented to them in the Diagnostic.

## Assessed Skills

Some of the important skills addressed in Comprehension: Informational Text domain include:

- Ask Questions about Key Ideas
- Identify Main Idea/Key Details
- Cite Textual Evidence
- Make Inferences
- Retell or Summarize Text
- Demonstrate Understanding of Unfamiliar Words
- Describe or Analyze Relationships between Ideas and Events in Scientific, Historical, and Technical Texts
- Identify or Analyze Author's Point of View or Purpose
- Connect Text and Visuals
- Use or Interpret Text Features
- Compare Author's Point of View in Two Texts
- Analyze and Compare Text Structures within One Text or between Two Texts
- Find and Integrate Information from Multiple Sources
- Evaluate Arguments/Persuasive Techniques
- Analyze Interactions among Individuals, Events, and Ideas
- Analyze the Impact of Text Structure on Meaning
- Understand Unfamiliar Words/Figurative, Connotative, Technical Meanings
- Analyze Author's Point of View, Purpose, and Rhetorical Techniques
- Compare, Contrast, and Integrate Information from Various Print and Digital Sources
- Interpret Figurative Language/Allusions/Connotations
- Analyze Word Choice, Impact on Meaning, and Tone
- Analyze Point of View and How It Is Conveyed
- Compare and Contrast Literary Texts and Multimedia Presentations of the Texts

## Comprehension: Informational Text (Cont'd.)

## Sample Item

The screenshot shows a digital reading interface with a green background. At the top, there are two tabs: 'Passage 1' and 'Passage 2', with 'Passage 2' selected. The main content area is divided into two columns. The left column contains the text of the passage, and the right column contains a question box.

**Passage 1** | **Passage 2**

**School Newspapers**

Working on a school newspaper staff can be an exciting part of the high school experience. Whether as elective courses or student-interest clubs, school newspapers are an excellent way for students to sharpen important skills. The production of these routine publications supports establishing school environments that offer students boosts in creativity, partnerships, community-building, and critical thinking.

Students who choose to work on the school newspaper have the opportunity to open doors in multiple areas of journalism. For example, students practice reporting, which provides regular chances for them to develop

In **Passage 2**, review the paragraph that begins at the bottom of page 1 and continues on page 2.

Click or tap ONE sentence in the paragraph that BEST shows how the author appeals to the reader's emotions.

1 2 3 4

**Grade 9:** This item measures whether students are able to analyze how an author uses rhetorical techniques to support a point of view or purpose in informational text.

## Reading Conclusion

In addition to these Reading domains, the *i-Ready Diagnostic* also includes an Overall Reading score, which is a composite score. This score combines student performance on the Comprehension: Literature and Comprehension: Informational Text domains. This score reflects a student's overall reading comprehension proficiency across both Comprehension domains included on the Diagnostic.

# What Is Assessed in Mathematics?

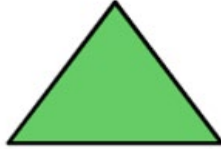

Most state content standards organize mathematical content within grades by domain—big ideas that connect topics across grades. A major goal of this grouping is to build understanding of mathematical concepts within each domain and how they progress across grades. *i-Ready Diagnostic* organizes mathematical content into four domains: Number and Operations, Algebra and Algebraic Thinking, Measurement and Data, and Geometry.

The intent of the *i-Ready Diagnostic* for Mathematics is to help identify the specific skills each student needs to develop, identify each student’s areas of strength, and measure academic growth throughout the school year. The Diagnostic provides comprehensive insight into student learning across the multiple domains in Mathematics. The domains are evaluated using a variety of item types and tools. The item types are:

## Multiple Choice

Which shape has 3 sides and 3 angles?

**Callout:** 

## Short Answer

Compare the fractions  $\frac{5}{6}$  and  $\frac{5}{8}$  using  $<$ ,  $>$ , or  $=$ .

Type the symbol in the box.

**Callout:** Type the symbol in the box.

$\frac{5}{6}$    $\frac{5}{8}$

## Dropdown

Matt has 2 math problems left to do. Jia has 10 math problems left to do. Matt says that Jia has 8 times as many math problems left to do as he has. Use the drop-down menus to explain why Matt's statement is not correct.

Click the arrows to choose an answer from each menu.

Matt found the number that when  2 equals 10. He could have used the equation  to find the number of times greater 10 is than 2.

Jia has  times as

**Callout:** Choose...

4  
5  
12  
20

## Number Line

Click on the number line to show  $\frac{1}{2}$ .

**Callout:** Click on the number line to show  $\frac{1}{2}$ .

0 1 2 3

# Mathematical Tools

Some items require the use of certain virtual mathematical tools. When necessary, the tool will appear directly embedded in the item. The Diagnostic includes the following mathematical tools:

What is the volume of this figure?

8 cm  
8 cm  
18 cm  
4 cm  
4 cm

Enter your answer in the box.  
square centimeters

**Four-Function Calculator**

What is the length of the hypotenuse of a right triangle with legs that measure 20 inches and 21 inches?

Type the answer in the box.  
inches

**Five-Function Calculator**

Add.  
Use the base-ten blocks. Click the Base-Ten Blocks button below.

35  
29  
2  
+ 13

79  
67  
77  
69

**Base-Ten Blocks**

What is the solution of this system of linear equations?  
 $y = x - 2$   
 $2y + x = 8$

Click on the coordinate grid below to graph the lines.

no solution  
infinitely many  
(3, 4)  
(4, 2)

**Coordinate Grid**

What is the rule for the number pattern below?  
Use the hundred chart. Click the Hundred Chart button below.

87, 67, 47, 27, ...

Add 10. Subtract 20. Add 7. Subtract 2.

**Hundred Chart**

Measure the angle.  
Use the protractor. Click the Protractor button below.

68° 72° 77° 83°

**Protractor**

Mathematical Tools (Cont'd.)

What is the length, in inches, of the bubble toy?  
Use the ruler to measure. Click the Ruler button below.

4 inches     $4\frac{3}{4}$  inches     $4\frac{1}{4}$  inches     $4\frac{1}{2}$  inches

Inches  
Centimeters

Done →

**Ruler**

Which number is less than 5?  
Use the counters with the ten-frame. Click the Counters button below.

2    6    9

**10-Frame with Counters**

What is the area of this figure?  
Use unit squares. Click the Unit Square button below.

6 inc  
3 inc  
2 inches  
2 inches  
□ = 1 sq

18 square inches

# Number and Operations

Number and Operations refers to the mathematics skills often thought of as arithmetic, from reading and writing numbers to adding, subtracting, multiplying, and dividing different types of numbers. This includes rational numbers, including whole numbers, decimals, fractions, integers, and irrational numbers. Number and Operations also includes number sense and quantitative reasoning.

The *i-Ready Diagnostic* for Mathematics assesses the Number and Operations domain by requiring students to demonstrate an understanding of representing numbers, relationships among numbers, relationships between operations and number systems, the number system, and performing computation with rational numbers accurately. This is done by presenting students with representations of numbers, operations, and mathematical tools. For example, students connect number words and numerals to the quantities they represent using various models.

## Assessed Skills

### Grades K–5

- Counting and Cardinality
- Number and Operations in Base Ten  
*Whole numbers and decimals, place value, comparing, adding, subtracting, multiplying, and dividing*
- Number and Operations—Fractions  
*Modeling, comparing, adding, subtracting, multiplying, dividing*

### Grades 6–8

- The Number System  
*Common factors, common multiples, positive and negative rational numbers, including integers, fractions, decimals, approximating numbers that are not rational, irrational numbers*

### Grades 9–12

- Number and Quantity  
*The real number system, quantities, the complex number system, vector and matrix quantities, operations on vectors*

## Sample Item

Alan used a total of  $3\frac{3}{4}$  cups of flour to make cakes. He used  $\frac{3}{4}$  cup of flour to make each cake. How many cakes did Alan make?

Total cups of flour

0 1 2 3 4

Type your answer in the box.

cakes

**Grade 6:** This item measures students' proficiency with solving a word problem involving the division of a mixed number by a fraction with the help of a visual model.

# Algebra and Algebraic Thinking

Algebra and Algebraic Thinking refers to mathematics skills related to seeing number patterns, understanding the meaning of addition, subtraction, multiplication, and division, and using symbols to write and solve equations, including those used to solve word problems. In the high school grades, this domain covers the algebra topics related to using functions, equations, and inequalities to model mathematical situations and solve problems by reasoning quantitatively and extending the understanding of operations beyond the real number system.

The *i-Ready Diagnostic* for Mathematics assesses the Algebra and Algebraic Thinking domain by requiring students to apply formulas, interpret word problems, and use images and modeling to come to a response to each item. Students demonstrate an understanding of quantitative relationships and analyze mathematical situations and structures using algebraic symbols, patterns, models, and words.

## Assessed Skills

### Grades K–5

- Operations and Algebraic Thinking  
*Meaning of operations, number relationships, applying properties of operations, solving word problems*

### Grades 6–8

- Ratios and Proportional Relationships  
*Percentages, rates, ratios*
- Expressions and Equations  
*Variables, equivalent expressions, exponents, radicals and integer exponents, solving real-world problems, slope, equations, inequalities, graphs of lines*
- Functions  
*Defining, evaluating, and comparing functions and modeling relationships with functions*

### Grades 9–12

- Algebra  
*Expressions, arithmetic with polynomial and rational expressions, interpreting, writing and solving equations, reasoning with equations and inequalities*
- Functions  
*Interpreting, modeling, and building functions (i.e., linear, exponential, quadratic, polynomial, logarithmic, trigonometric, rational)*

## Sample Item

Solve the equation for  $x$ .

$$\sqrt{-10x + 31} = 4 - x$$

$x = -5$  and  $x = 3$ 
  $x = -5$ 
  $x = -3$  and  $x = 5$ 
  $x = 3$

Done →

**Grade 11:** This item measures students' understanding of how to solve radical equations.

# Measurement and Data

Measurement and Data comprises a wide range of mathematics skills related to collecting, organizing, and interpreting numerical information, from telling time or using a ruler to measuring the length of an object to using formulas to find volume or surface area.

The *i-Ready Diagnostic* assesses the Measurement and Data domain by requiring students to understand how to use and interpret tables and graphs, and in later grades, statistics and probability. Students are asked to demonstrate proficiency in applying concepts such as length, area, weight, and volume and are able to select the appropriate type of unit of measurement.

## Assessed Skills

### Grades K–5

- Measurement and Data  
*Customary and metric units, time, money, length, capacity, weight and mass, geometric measurement, area, perimeter, volume, creating and interpreting graphs*

### Grades 6–8

- Statistics and Probability  
*Randomness, probability distributions, collecting and analyzing data, making inferences and conclusions based on random samples, and measures of center and variability*

### Grades 9–12

- Statistics and Probability  
*Interpreting categorical and quantitative data, making inferences and justifying conclusions, conditional probability, rules of probability, expected values, making decisions using probability*

## Sample Item

🔊 Ric measures the length of his shoe with paper clips. He needs 6 small paper clips to measure his shoe. How many big paper clips does he need to measure the same shoe?

🔊 more than 7      🔊 exactly 7  
🔊 exactly 6      🔊 less than 6

**Grade 2:** This item measures students' skills in relating the size of a unit of measurement to the number of units needed to equal the length of an object.

# Geometry

Geometry refers to a variety of skills related to analyzing two- and three-dimensional shapes. These include naming and classifying shapes using characteristics such as symmetry, number of sides, and angle measures, and in later grades, using congruence and similarity. In the high school grades, this domain covers geometry and measurement topics related to developing spatial geometric reasoning, connecting geometric properties and equations, writing proofs, and using statistics and probability concepts to analyze data.

The *i-Ready Diagnostic* assesses the Geometry domain by requiring students to make use of images, mathematical tools, and geometric relationships. Students use geometric properties and connections to solve word problems, evaluate constructs, and support mathematical conclusions.

## Assessed Skills

### Grades K–5

- Geometry  
*Two-dimensional figures, three-dimensional shapes, lines, segments, points, rays, angles, symmetry, coordinate plane, graphing points, perimeter, area, volume*

### Grades 6–8

- Geometry  
*Relationship between geometric figures, angle measures, area, surface area, congruence, similarity, coordinate geometry, Pythagorean Theorem*

### Grades 9–12

- Geometry  
*Congruence, similarity, transformations, right triangles, right triangle trigonometry, circles, proofs*

## Sample Item

🔊 Sofie has some big jars and some small jars. How many jars are small?

3

7

4

**Grade K:** This item measures the student's skill in classifying objects into given categories and counting the numbers of objects in the categories.

\*In Diagnostic Results reports for Grades 9–12, student data will be reflected in two domains: Algebra and Algebraic Thinking (includes topics shown in Grades 9–12 Number and Operations) and Geometry (includes topics shown in Grades 9–12 Measurement and Data).

## *i-Ready Diagnostic* Test Flows: Reading

For each subject, the domains and test flow (i.e., the order of domains) vary by grade level and student performance.

### Grades K-1

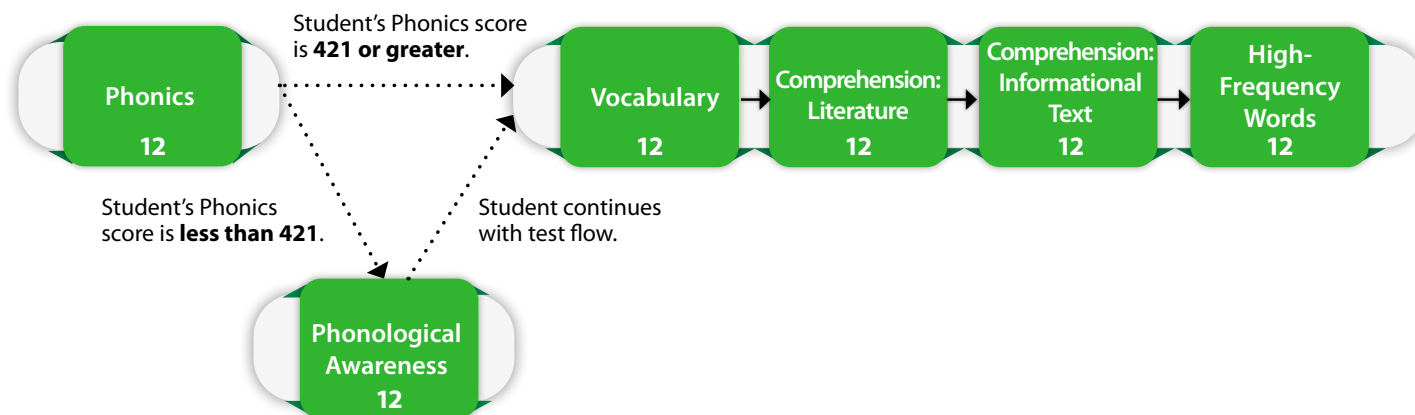

Students who are in chronological Grades K-1 will receive items in all six Reading domains. The test flow and number of items in each domain is as follows:

Students in Grades K-1 will see a total of 72 reading items across the six domains.

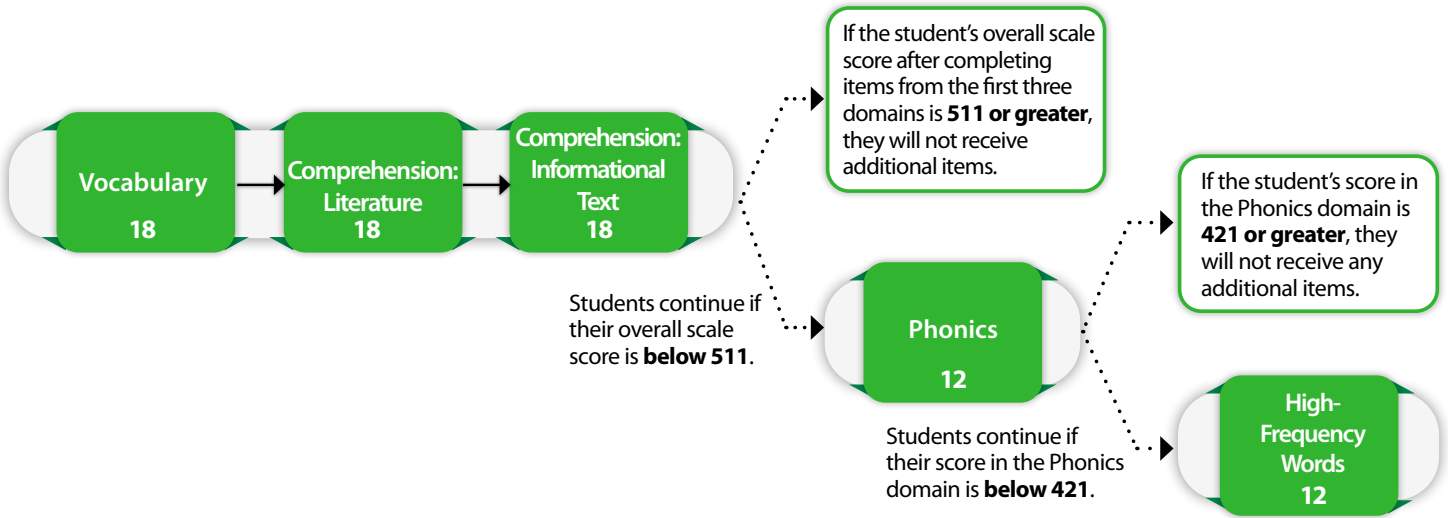

### Grade 2

Students who are in chronological Grade 2 are first assessed in the Phonics domain. The student's overall scale score after completing Phonics items determines the rest of their test flow.

*i-Ready Diagnostic* Test Flows: Reading (Cont'd.)

**Grades 3–8**

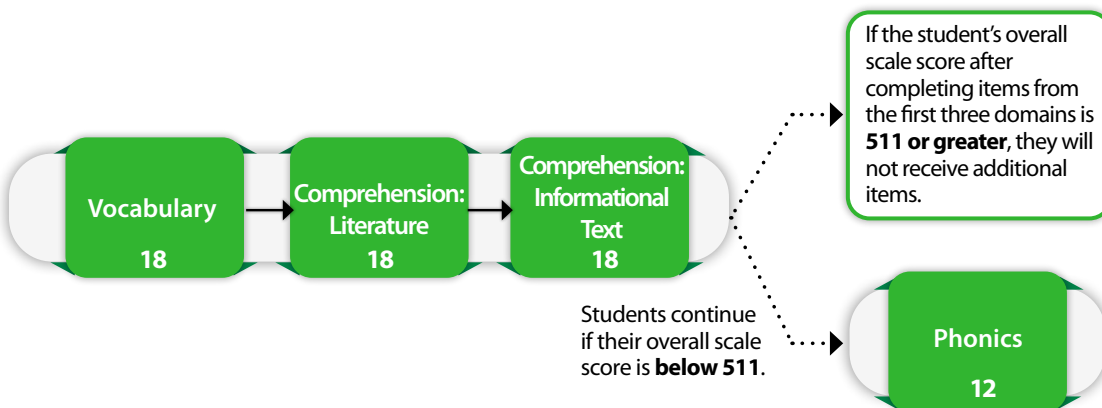

Students who are in chronological Grades 3–8 are first assessed in the Vocabulary, Comprehension: Literature, and Comprehension: Informational Text domains. The student's overall scale score after completing these domains determines if the test ends or continues. If the test continues, the student will receive Phonics, and the score on Phonics determines if the test ends or continues to High-Frequency Words.

Students whose test ends after the first three domains will see a total of 54 items, students whose test ends after the Phonics domain will see 66 items, and students who see all five domains will see 78 items.

**Grades 9–12**

Students who are in chronological Grades 9–12 are first assessed in the Vocabulary, Comprehension: Literature, and Comprehension: Informational Text domains. The student's overall scale score after completing these domains determines if the test ends or the student continues to Phonics.

Students whose tests end after the first three domains will see 54 items. Students who see all four domains will see 66 items.

# Mathematics

For each subject, the domains and test flow (i.e., the order of domains) vary by grade level and student performance.

## Grades K–8

Students who are in chronological Grades K–8 will be assessed in all four Mathematics domains in the following order:

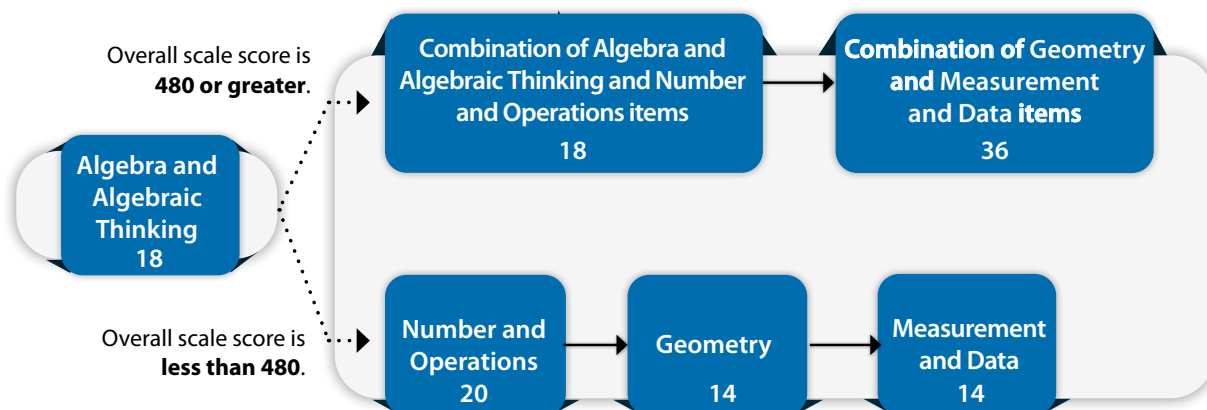

Students in Grades K–8 will see 66 total items across the four Mathematics domains.

## Grades 9–12

Students who are in chronological Grades 9–12 are first assessed in the Algebra and Algebraic Thinking domain. The student's overall scale score after completing the first 18 items in this domain determines the rest of their test flow.

Students who score below 480 on the first set of items follow a test flow consisting of Number and Operations, then Geometry, then Measurement and Data. This branch of the test flow is designed to assess students who are generally performing well below proficiency on typical high school content. The goal is to provide instructional information to educators to help get students to grade-level proficiency.

*i-Ready Diagnostic* Test Flows: Mathematics (Cont'd.)

Students who score at or above 480 on the first set of items follow a separate branch of the test flow that is for students who are ready for typical high school coursework.

In the first set of items, the students will see a combination of Algebra and Algebraic Thinking items and Number and Operations items. Students will see a maximum of 12 items in Algebra and Algebraic Thinking and a maximum of nine items in Number and Operations. In high school, the Number and Operations items are more similar to Number and Quantities items—a high school mathematics concept closely associated with algebraic thinking—and as a result, they contribute to a student's Algebra and Algebraic Thinking domain score. Students do not receive a Number and Operations domain placement.

For the second set of items, students will see a combination of Geometry items and Measurement and Data items. Students will see a maximum of 30 items in Geometry and a maximum of six items in Measurement and Data. For this branch, Measurement and Data items are generally represented through high school-level statistics items, and as a result, they contribute to a student's Geometry domain score. Students in this branch consequently do not receive a Measurement and Data domain placement.

Students who score below 480 on the first domain will see a total of 66 items. Students who score at or above 480 on the first domain will see a total of 72 items.

### Field Test Items

Some students may be asked to take a small number of field test items, which contribute to the continual improvement and validity of the Diagnostic. These questions are seamlessly inserted into a student's test-taking experience, and a student would not be aware that they are taking a field test item. These items do not contribute to a student's score.
