# The Relationship between i-Ready Diagnostic and the 2022 Smarter Balanced Assessment (SBA) in California 

Curriculum Associates Research Brief | December 2022

## Research Overview

i-Ready Diagnostic and the 2022 SBA are highly correlated-with an average spring correlation of $\mathbf{8 3}$ for English Language Arts/Literacy (ELA) and .88 for Mathematics.

## About the Students Included in the Study

Curriculum Associates conducted a large-scale study on the relationship between the i-Ready Diagnostic and the 2022 SBA for Grades 3-8 in ELA and Mathematics, the primary grades in which i-Ready is used in California for which there is a state summative assessment in place. Students came from a total of 35 school districts, four of which are charter agencies (see Table 1). The school districts were selected for participation in the study specifically to be representative of the state in terms of factors such as urbanicity, race/ethnicity, and socioeconomic status (using National School Lunch Program as a proxy). See the appendix for more information on the sample.

## Correlation Results

Across all grades and in both subjects, results provide evidence for the strong correlation between i-Ready Diagnostic and the SBA (see Figure 1). Specifically, spring correlations for ELA ranged from . 81 for Grade 8 to .84 for Grade 3, and spring correlations for Mathematics ranged from .85 for Grade 8 to .89 for Grades 4 and 6 . These correlations, all surpassing the .70 standard generally considered to be strong in education research, provide evidence of a substantial relationship between i-Ready Diagnostic and the SBA in California.

## Why Correlations Matter

Correlations are one of the most commonly used and widely accepted forms of validity evidence. Correlations demonstrate that when students score high on one assessment, they also tend to score high on the other, and similarly, when students score low on one assessment, they also tend to score low on the other. A high correlation between two assessments provides evidence that the two assessments are measuring related constructs.

## Appendix

The sample included more than 201,000 students, with between 24,023 and 30,352 students per grade for ELA for the spring $i$-Ready assessment and between 26,236 and 31,652 students per grade for Mathematics for the spring i-Ready assessment (see Table 2). These students took both the i-Ready Diagnostic and the SBA during the 20212022 school year. For the purposes of this study, i-Ready Diagnostic scores were included only if the student indicated that the test was taken completely in school.

Table 3 shows the percentage of students in each race/ethnicity group from the study samples. In both the ELA and Mathematics samples, we have strong representation from students of different racial/ethnic groups.
