17 Explain how the strategy to solve problem 5 is different from the strategy used to solve problem 6.

Answers may vary. Possible answer: To solve problem 5, I first added tens then added on the ones. To solve problem 6, I first added ones to the nearest ten then added tens.

18 Explain the strategy you used to solve the first part of problem 14.

Answers may vary. Possible answer: First I added 3 to 57 to get to the nearest ten, 60. Then I added 20 to 60 which equals 80. Finally, I added 3 to get to 83. So 3 + 20 + 3 = 26.

11 Explain how you found the answer to problem 8.

Answers will vary. Possible answer: I broke each number into tens and ones. Then I added the ones: 3 + 4 + 3 + 4 = 14. Next, I added the tens: 50 + 70 + 10 + 40 = 170. Finally, I added 170 + 14 to get 184.
