

# The *i-Ready* Projected Proficiency Feature

## Giving Educators Early Insight into Students' Potential Success on State Assessments

Projected Proficiency shows educators the relationship between *i-Ready Diagnostic* scores and proficiency on statewide Grades 3–8 assessments. This feature provides actionable information that teachers and administrators can use to plan for individuals and groups of students.

*i-Ready's* Projected Proficiency reports give educators information that can help them plan a pathway for students who need more time to reach proficient on the state assessment and can summarize the progress of on-grade level students as they achieve high expectations.

- **Projections tied to the *i-Ready* growth model are used by educators across the country.**

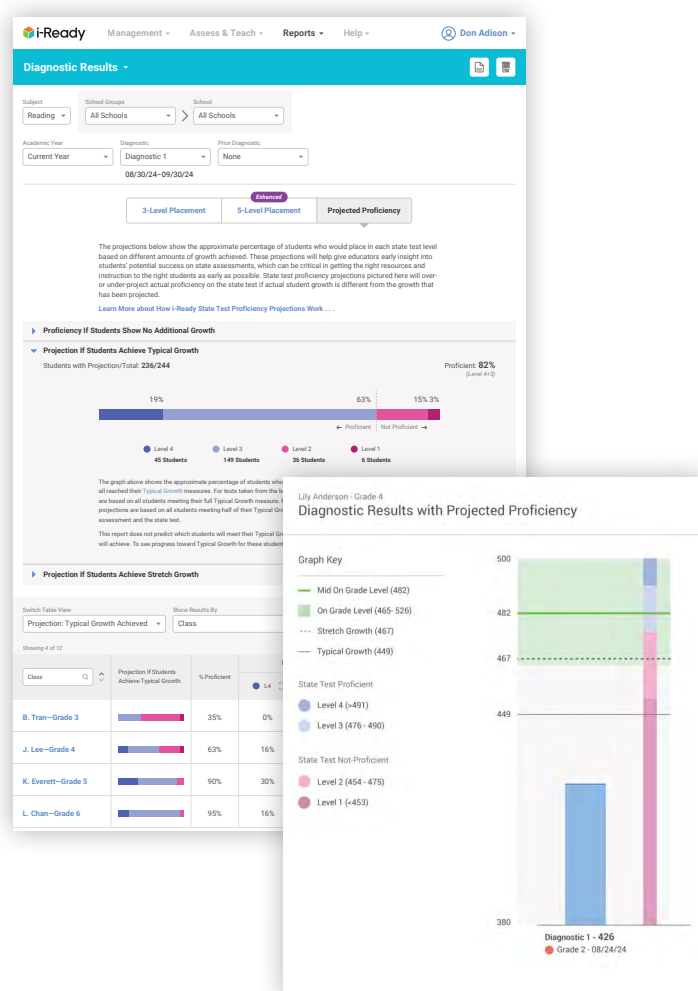

Projected proficiency provides information about how Typical Growth and Stretch Growth® can move individuals and groups of students toward a proficient score on state assessments. Diagnostic scores are combined with information from *i-Ready's* rigorous and easy-to-understand growth model, making projections transparent to educators.

- **Three projections are better than one.**

Not all students grow at the same pace, so *i-Ready's* Projected Proficiency feature provides three projections: a conservative, baseline estimate that assumes students do not grow between their Diagnostic and the state assessment; a most-likely projection assuming students meet their Typical (i.e., average) Growth target; and a more aggressive projection assuming students meet their Stretch (i.e., aspirational) Growth target.

- **Projections that are meant to be beaten.**

State proficiency estimates are only a few clicks away from the types of targeted instruction that can help students meet or surpass their projections, including *i-Ready's* Tools for Instruction, Can Dos, and Next Steps.

For more information, email [info@cainc.com](mailto:info@cainc.com) or contact your *i-Ready Partners*.

Projections are only for students in Grades 3–8. Not available in all states.
