

i-Ready Personalized Instruction and Louisiana State Assessment Performance

Curriculum Associates Research | November 2024

Research Overview

To understand the association between the use of *i-Ready Personalized Instruction* (PI) and performance on the Louisiana state assessment, the Louisiana Educational Assessment Program (LEAP), Curriculum Associates evaluated LEAP scores and proficiency levels. Analyses included 39,667 students who used *i-Ready* PI during the 2021–2022 school year. These analyses examined the difference in state scores and proficiency rates between students who used *i-Ready* PI as intended and students using the program less consistently, accounting for fall performance. For reading, students who used *i-Ready* PI with fidelity demonstrated higher state test scores and were more likely to be proficient in most grades. For mathematics, fidelity users showed higher state test scores and were more likely to be proficient in all grades.

RESEARCH SAMPLE

39,667 students

148 schools

20 districts

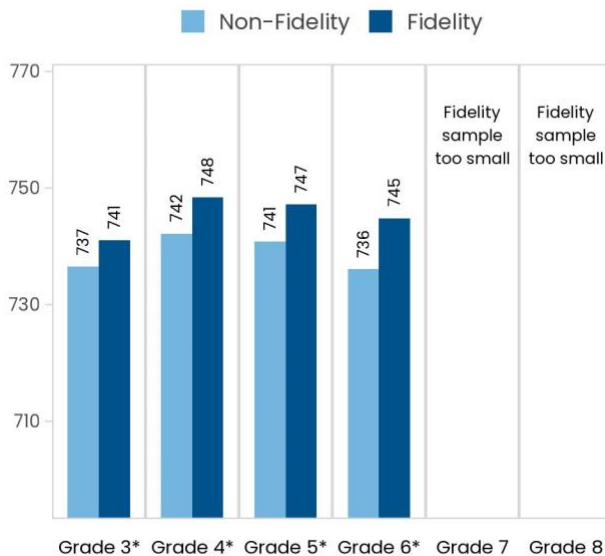

FIDELITY USE

≥ 70% pass rate

≥ 18 weeks per year

≥ 30 minutes per week

LEAP Reading Scores by Fidelity Use

LEAP Mathematics Scores by Fidelity Use

Note: * $p < .05$; State scores presented above reflect adjusted averages accounting for fall baseline performance. The non-fidelity group includes students whose *i-Ready* PI use was not sufficient to meet fidelity standards.

Methods: Researchers used statistical modeling to evaluate student performance (state test scores and proficiency rates) based on *i-Ready* PI usage. These models, graphed above, adjust for fall *i-Ready Diagnostic* scores to account for student performance at school entry. Reading and mathematics scores were modeled separately by grade level. All models removed outliers in *i-Ready* PI usage. All results are correlational, testing if *i-Ready* PI usage is associated with differences in state scores/proficiency.
