

Fluency Flight Paper Airplane Directions

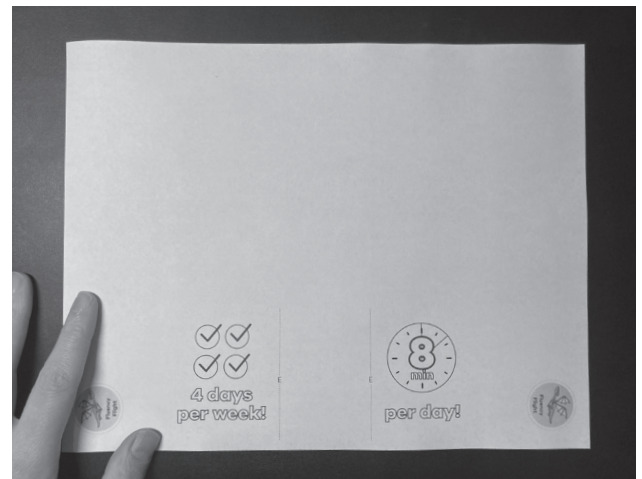

1 Print the template. Be sure to select:

- Actual size
- Print on both sides of paper
- Flip on long edge

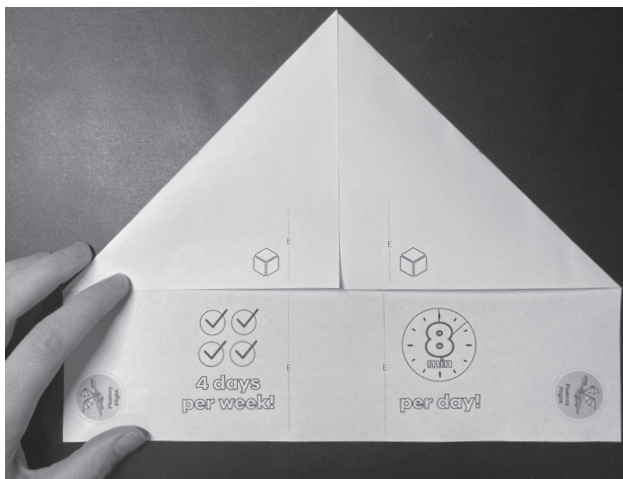

2 If you want to personalize or color in your paper airplane, you may want to do so now before you start folding.

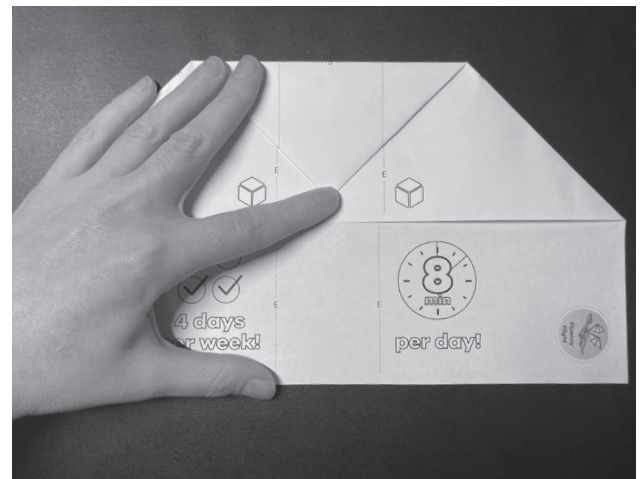

Then, start with the **clock** side of the template facing up.

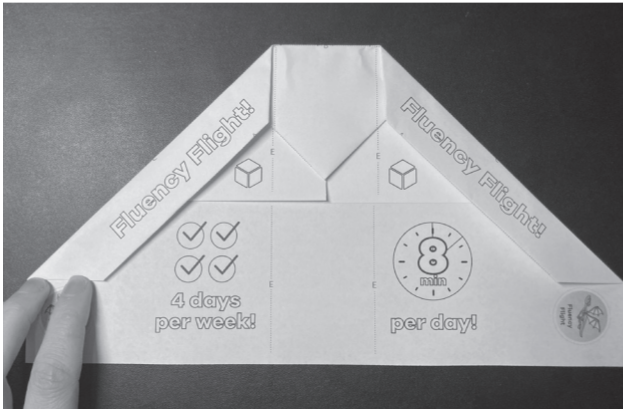

3 Fold toward yourself **along line A** on both sides.
Note: Run your fingernail along your folds to get nice, crisp edges. It's ok if you make a mistake and have to try again!

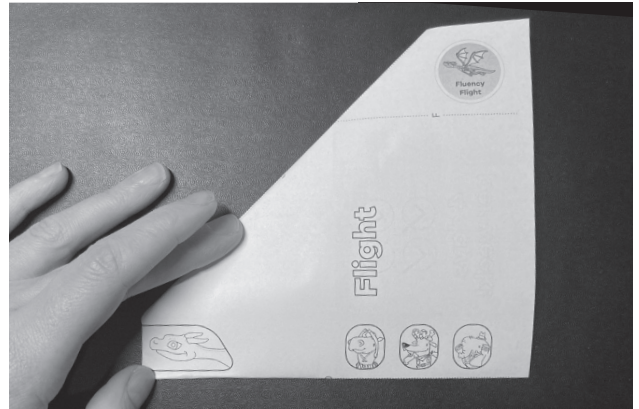

4 Fold the top point of the paper down toward you **along line B**.

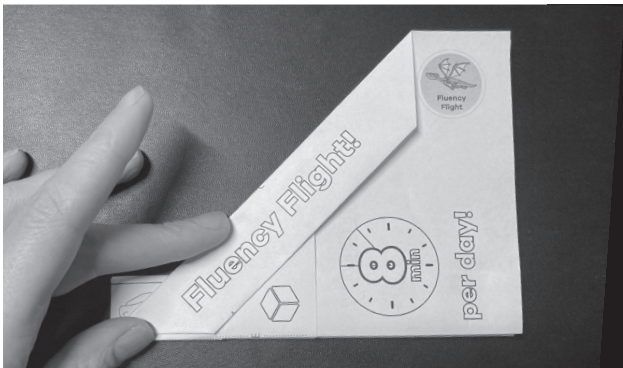

- 5** Fold the edges down **along line C** toward you on both sides.

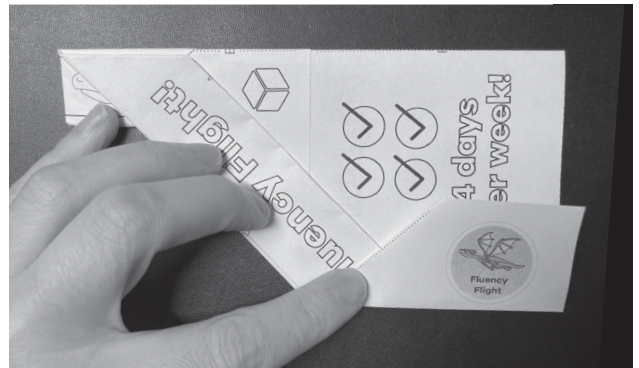

- 6** Fold the paper in half **along line D**.

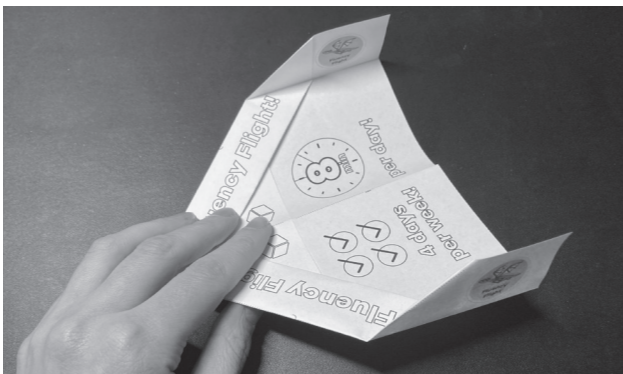

- 7** Open the fold you just made to find the lines marked E. Fold **along line E** on both sides so the clock face and check marks are on the outside.

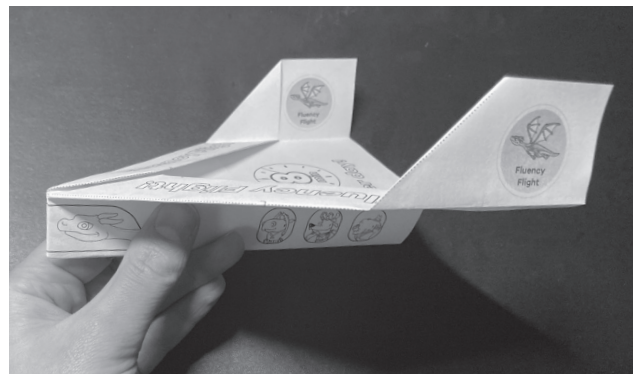

- 8** Fold **along line F** on both sides.

- 9** Adjust the sides you just folded so the **flaps stand up**.

- 10** You're ready to fly!
