

Desktop Lock

Secure the PC. Protect What's Inside.

Purpose-Built Security for Desktop Computers

Secure desktop towers and high-value components without compromising presentation or sell-through opportunities. Desktop Lock delivers multiple levels of protection in a low-profile design, helping retailers reduce losses while maintaining an open, customer-friendly display.

MATCH SECURITY TO RISK

Select the protection level that fits your merchandise and store environment, allowing you to maintain the right balance between accessibility, presentation, and security.

REDUCE THE COST OF THEFT

Secure critical components such as graphics cards and RAM that often represent a significant portion of a computer's value, helping reduce losses and protect inventory.

LOW-PROFILE PRESENTATION

Replace bulky DIY cables, brackets, and wraps with a low-profile solution designed to preserve product presentation while keeping merchandise secure and accessible.

Proven Performance in Every Detail

Three Levels of Protection.

Match security to the risk level of your merchandise. Protect internal components, secure the entire desktop tower, or add an alarmed tether for enhanced theft deterrence.

Part of the OneKEY Ecosystem

Extend the OneKEY Ecosystem to desktop computers, helping standardize security across more merchandise categories and simplify store operations.

Keep Desktops Intact.

Secure your computers without damaging them, so they can remain fully sellable and customer-ready.

Easy Re-Merchandise.

The remerchandising kit supports display updates and fixture changes without replacing the security solution.

Works With Existing InVue Infrastructure.

Compatible with existing K-Locks, enabling a more standardized approach to security while simplifying deployment and reducing hardware costs.

Universal Desktop Compatibility.

Works with both screw-mounted and magnetic computer enclosures for broad compatibility across desktop brands and configurations.
