

Luxe Lock

A New Standard in Luxury Security.

Belongs With The Collection.

Visible security can deter theft, but it often disrupts the atmosphere of your retail environment—compromising presentation and the overall experience. Luxe Lock is designed to resolve this tension. It safeguards high-value pieces with discreet, intelligent security that preserves the beauty of every item on display.

PREMIUM DESIGN

Design-led from the start. Defined by its subtle form, high-end finish, and intuitive use, Luxe Lock sits confidently alongside your collection—never competing with it.

SMART ACCESS

Access via OneKEY allows for quick unlocking. Behind the scenes, access activity is recorded, providing clear visibility and improving operational efficiency across the sales floor.

UNCOMPROMISING SECURITY

Designed to hold firm against forceful removal, Luxe Lock withstands up to 350 lbs of pull force while preserving the delicate materials and finishes of your products.

Proven Performance in Every Detail

Adaptable by Design.

Supports flexible merchandising, with a variety of tether lengths and a base designed to sit securely across a variety of fixtures and surface materials.

Tool-free and Adhesive-free.

The tether loops around existing fittings for effortless repositioning with no adhesive needed, allowing displays to be refreshed and remerchandised in seconds.

Preserved Craftmanship.

Durable tethers combine exceptional resilience with a gentle touch, protecting fine leathers and delicate finishes while preserving their condition for display and sell-through merchandise.

Intelligent Oversight.

The OneKEY app provides battery status and visibility to access data. Access events are logged automatically, creating a clear record of who accessed the device and when.

Access, Your Way.

Unlock using either the InVue app or the physical OneKEY—both provide immediate access, and both capture activity within the same system for clear visibility.

Seamless. Even When Not in Use.

A refined cover slides over the mounting plate to conceal and protect it whenever a Luxe Lock isn't in use, ensuring the display maintains a clean, uninterrupted look during remerchandising or planogram changes.
