

holden lounge modular seating collection

Holden Seating System Specification Guide

Standard Features

The Holden modular seating system is comprised of 13 skus that can be used in multiple ways to create unique seating environments. Included within the collection are two freestanding skus and 11 connecting modules. Freestanding options are not available for the connecting modules.

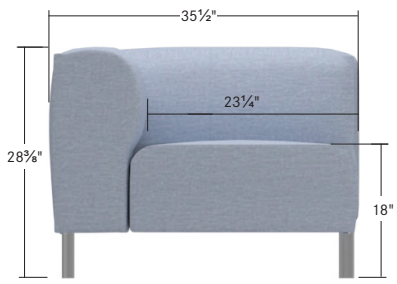

Holden is upholstered and features polished aluminum legs that are available in all Bernhardt standard powder coat finishes. Each unit comes standard with a non-marring leveler pre-installed.

Module configurations connect via a ganging bracket and a load bearing bracket for ease of installation and added support. The ganging bracket and load bearing bracket come pre-installed.

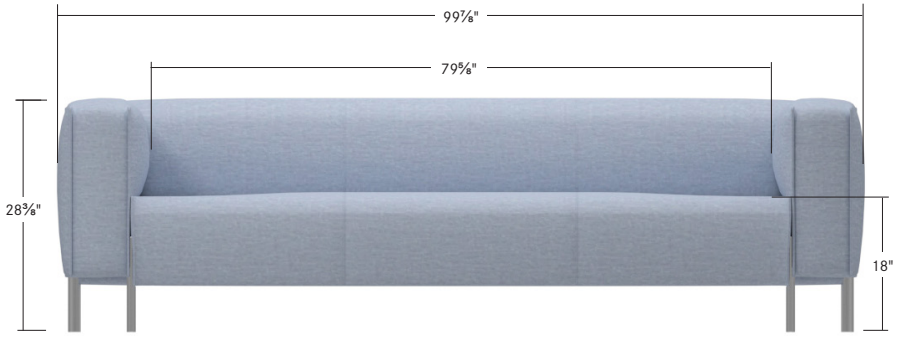

All COM/COL fabrics must be preapproved by Bernhardt Design prior to application. When ordering configurations, please provide the total COM yardage from the same dye lot in a continuous roll(s).

Holden is SCS Indoor Advantage Gold certified. See terms and conditions for additional finish and environment information.

Please visit Bernhardtdesign.com for a complete library of 2D, 3D and Revit models. You may also contact your local sales representative or the Bernhardt Design corporate office for specification assistance.

When ordering multi-item configurations, please provide the total COM yardage from the same dye lot in a continuous roll(s). All COM/COL fabrics must be preapproved by Bernhardt Design prior to application. Reference terms and conditions for COM/COL approval procedures and instructions for tagging COM.

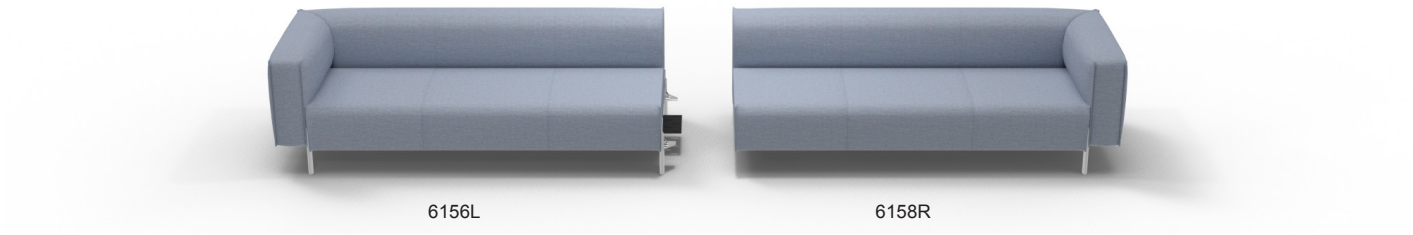

Connecting Modules

Holden features 11 connecting modules that connect via a pre-installed ganging bracket and a load bearing bracket to help with assembly. The load bearing bracket is part of what we call the Leg Configuration, which also includes 2 legs.

When connecting two modules, one module must contain a leg configuration, and the second module must have an open end with no legs on the open end. The leg configuration end is then pushed together with the open end, the ganging bracket and load bearing bracket positioned and secured with bolts.

Examples below show modules with the leg configuration and modules with open ends that together form a modular configuration.
