

ADHESIVES FOR CATHETER ASSEMBLY

Only Dymax offers expert knowledge of light-cure technology, along with a full array of light-cure products. Dymax is committed to developing a true collaborative partnership — applying our extensive process knowledge to your specific application challenges.

We create custom solutions to ensure that chemistry and equipment work seamlessly together with maximum efficiency. Our application engineering team works side-by-side with our customers, providing assistance with formulation, testing, evaluation, and pre-production trials. We also offer an extensive inventory of curing equipment, manual and automated dispensing systems to help you achieve a more efficient, cost-effective manufacturing process.

About Our Products

Since pioneering light-cure technology over 40 years ago, Dymax has continued to develop innovative ways to optimize medical device assembly. We understand the demands of the medical device market and are ready to assist you with every step of the product development process including adhesive selection, dispensing options, curing recommendations, biocompatibility testing, component design, and process validation. We are continually developing new technologies to help you build safer, higher quality products that increase your manufacturing efficiency, and deliver the best possible outcomes.

MD® Adhesives

Dymax MD® adhesives are specially formulated for disposable medical device assembly and used in a variety of applications.*

- Optimize assembly speeds enabling faster processing, greater output, and in-line inspection of bond lines
- No added solvents
- RoHS compliant
- Many meet ISO 10993 biocompatibility and/or USP Class VI standards.

*MD® adhesives are intended for use in short-term (<29 days) or single-use disposable-device applications only. Dymax does not authorize their use in long-term implant applications. In all cases, it's the user's responsibility to determine and validate the suitability of these adhesives in the intended medical device.

Compatible sterilization methods include gamma irradiation and ethylene oxide. Sterilization by autoclaving may be limited to certain applications. It remains the user's obligation to ascertain the effect of sterilization on the cured adhesive.

CTH-Series Adhesives

These single-component adhesives provide excellent adhesion, a high degree of flexibility, and fast light cures for consistent, low stress catheter assembly.

- Formulated to meet the unique assembly challenges associated with the newest catheter materials, including Nylon 12 and PEBA
- Rapid cure using LED or UV/Visible light
- Excellent moisture and humidity resistance
- Available with patented fluorescing technology, making in-line inspection easy

HLC™ Adhesives

HLC™ adhesives combine the advantages of light-curable and anionic chemistries in a unique hybrid platform, curing rapidly in both light and dark areas. These materials enable bonding of opaque or light-blocking substrates, expanding design and process flexibility.

CTH-Series Adhesives

Product	Unique Product Feature	Recommended Substrates	Viscosity, cP	Rheology	Durometer Hardness	Tensile Break, MPa [psi]	Elongation at Break, %	Modulus of Elasticity, MPa [psi]	Fluorescing*

HLC™ Adhesives

Patented Hybrid Light-Curable Materials with On-Contact Dark Area Cure Capability

Dymax hybrid light-curable technology is a revolutionary new adhesive platform that combines the best attributes of anionic and free radical chemistries into one. HLC adhesives exhibit the exceptional physical and performance properties of Dymax standard light-curable materials and the rapid on-contact cure of anionics. The incorporation of contact curing allows these materials to be used with a larger range of substrates and provides curing in dark areas not reachable by light.

HLC™ adhesives are ideal for medical device assemblies with shadowed bond areas, including many catheter bonding applications. Due to their unique hybrid curing chemistry, these adhesives require specific storage, handling, application, and curing practices. For complete guidance, refer to the [Guide to HLC™ Adhesives](#).

Product	Features & Applications	Nominal Viscosity, cP	Durometer Hardness	Modulus of Elasticity, MPa (psi)	Tensile at Break, MPa [psi]	Elongation at Break, %	Linear Shrinkage, %	ISO 10993 Biocompatibility
HLC-M-1000	- Hybrid light & contact cure adhesive - Low to no blooming with light cure - Wicking grade viscosity - Recommended substrates: ABS, PC, PCTG, PEBA, PETG, PMMA, PS, SAN, SS	3	D80	2,144.3 [311,000]	49 [7,100]	4	0.7	- ISO 10993-4 Hemolysis - ISO 10993-5 Cytotoxicity - ISO 10993-6 Implantation - ISO 10993-11 Systemic Toxicity - ISO 10993-23 Intracutaneous Irritation
HLC-M-1004	- Hybrid light & contact cure adhesive - Limited blooming with light cure - Recommended substrates: ABS, CAP, PC, PEI, PMMA, SAN	1,300	D65	544.7 [79,000]	13.1 [1,900]	150	0.2	

Key Attributes

- Fast, tack-free cure with UV light - broad spectrum or LED
- Cures with very low intensity (~20 mW/cm²)
- On-contact dark area cure capability
- Improved physical properties with low to no blooming after proper light cure
- Heat and humidity resistance
- Wicking-grade viscosity available for fast flow into tight-fitting assemblies
- ISO 10993 evaluated per intended use
- Cold ship/storage

Adhesive Innovations

As an innovator in the adhesive and coating industries, Dymax strives to create new technologies that help manufacturers increase process efficiency, productivity, and throughput while decreasing costs and inventory. Through the years, our dedication to innovation has resulted in over 30 patents and numerous awards for our innovative technologies and service.

See-Cure Technology

Confirm Adhesive Placement & Cure

- Material transitions color when cure is complete
- Provides critical safety feature for manufacturing processes
- Simple visual confirmation of cure, no special equipment needed

Ultra-Red® Technology

Enhance Bond-Line Inspection

- Fluoresces bright red when exposed to low-intensity black light so bond lines can be easily inspected
- Produces a unique energy peak exclusive to Dymax so products can be marked and positively identified

Encompass® Technology

Enhance Bond-Line Inspection & Confirm Cure

- Ultra-Red® and See-Cure technologies incorporated into one product
- Manufacturers gain efficiencies from rapid curing with easy cure confirmation and post-cure bond-line inspection

Multi-Cure® Technology

Eliminate Uncured Material in Shadow Areas

- Cures with light but features secondary heat cure for material that flows into shadow areas.

TPO-Free Adhesives

Trusted Quality, Future-Ready Formulations

- Formulated without Trimethylbenzoyl Diphenylphosphine Oxide (TPO)
- Same trusted performance and reliability while supporting long-term product planning and compliance

Dispensing & Light-Curing Equipment

Dymax dispensing and light-curing systems are perfectly matched to our adhesives' chemistry. Our field-proven dispense solutions are designed to fit many adhesive dispensing applications and include various automatic and manual dispense systems, spray valves, and related components for seamless integration into your assembly process. We also offer a complete line of conventional and LED light-curing equipment including spot, flood, and conveyor systems, as well as radiometers for measuring light intensity. Our equipment can be configured as stand-alone units or integrated into existing manufacturing assembly lines for fast processing. Visit the dymax.com website for a complete listing of our equipment.

Dymax Dispensing Systems

- Pneumatic dispense and spray systems
- Available with suck back control for crisp shutoff even with stringy/tacky materials
- Valves with disposable fluid paths available for contaminate-free dispensing

BlueWave® MX-150 LED Spot-Curing System

- Emitter design for set up flexibility and consistent intensity
- LED curing emitters in 365, 385, and 405 nm
- PLC interface for easy integration into fully automated lines

BlueWave® QX4 LED Spot-Curing System

- One controller controls up to four LED heads
- LED heads available in 365, 385, and 405nm
- PLC interface

RotoSpense 360

- Effortless 360° dispensing of adhesives
- Significantly reduces the time and resources expended on manual adhesive dosing in tube set applications.

Radiometers

- Provides accurate measurement of system lamp intensity and dosage
- UV broad-spectrum and LED compatible radiometers
- Wand and puck style radiometers available for spot, flood, and conveyor systems

Reference Tables

Viscosity

When choosing a viscosity, consideration should be given to how the adhesive must flow (or not flow) on the part after the adhesive is applied. Part geometry, process design, and assembly speed and method should all be considered when selecting viscosity. Viscosity is a material's resistance to flow. Low-viscosity adhesives flow more readily than high- viscosity adhesives. Thixotropic gels flow very slowly and are recommended when adhesive flow on a part after dispensing must be minimal.

Dymax adhesives are available in a variety of viscosities. The identifiers appear as suffixes on product names as follows:

VLV = Very Low Viscosity VT = Very Thick

LV = Low Viscosity GEL = Gel

T = Thick

Standard viscosity products do not have a suffix.

Typical Centipoise (cP/MPas)	Typical Reference Liquids at 20°C
1	Water
10	Kerosene
110	SAE 10 Oil
200	Maple Syrup
440	SAE 30 Oil
1,100	Castor Oil
3,000	Honey
10,000	Molasses
18,000	Chocolate Syrup
65,000	Vaseline
100,000	Sour Cream
200,000	Peanut Butter
1,500,000	Shortening

LV Low Viscosity
Newtonian

T Viscosity
Slightly Thixotropic

VT Viscosity
Thixotropic

GEL Viscosity
Highly Thixotropic

Dots

Volume of a dot is 1/2 the volume of a sphere $V = .2618D^3$

						
Volume (ul)	0.10	0.51	0.05	0.01	00.0	25.0
Volume (mL)	0.0001	0.00050	0.0010	0.0050	0.0100	0.025
