Ovenable wrap	64,000	1 - 2 Pantones	8 - 10 weeks

Pantone vs CMYK

When it comes to custom print, some Vegware products let you choose from Pantone or CMYK Colours. **Our reference guide explains the differences between these printing inks.**

Pantone (spot colours)

Pantone 363U

Pantone 1375C

Great for: Designs that use a few solid colours, or if you need a very specific colour.

Uses premade inks, rather than mixing together different colours.

Pantone (or Spot) colours are **incredibly accurate** as they are always made to the exact same standard.

Pantones use specific references, such as **363U** or **1375C**.

Uncoated(U) is for matt surfaces, Coated(C) is for glossy surfaces.

CMYK (full colour)

Ideal for: Shading, colour gradients and photographic images.

Uses a mixture of four different colours (Cyan, Magenta, Yellow and Key/Black) to create various shades. This is the method used by most office and household printers. C/M/Y/K codes (e.g. 10/20/30/40) tell the printer what percentage of each colour is needed. There is **no limit to the number of colours** used in CMYK printing.
