

Painting Restrictions on Forte™ Opening Solutions Wood Veneered Stile and Rail Doors with Panels

Forte Opening Solutions does not warrant painting wood veneer panels on true Stile and Rail doors with flat, veneer wrapped and lumber banded panels. Paint grade stile and rail doors with wood veneer panels should not be used in painted applications. Stile and rail doors requiring a flat, veneer wrapped or lumber banded panel have been specifically designed for stained applications. If painted, the customer could experience a delamination of the wood veneer on the panels due to the selected paint materials combined with the paint application process. The moisture in the paint materials can have an adverse effect on the bond strength of the thin wood veneer to the panel substrate used in the construction. Forte Opening Solutions will not warrant the door used in this specific application. It is highly important to consult your sales and service representative in selecting the correct stile and rail door materials for paint applications.

Forte Opening Solutions is continually involved in the product testing and development of paintable Stile and Rail doors. Please call your Sales and Service Representative at 1-800-869-3667 for details on specific applications.
