TRIO.BAS[™]
BIOLOGICAL AIR SAMPLER

HARDY
DIAGNOSTICS

Why Adopt Daily Shift Heads?:

- Daily Shift Heads can be used on the same day, on the same shift, inside the same cleanroom
- The use of a sterile aspirating head with an active air sampler is requested for each microbial air sampling cycle, or group of sampling cycles, in the same controlled environment
- Stainless Steel Aspirating heads should be sterilized by autoclaving with subsequent filing of a sterilization document. Daily Shift Heads are ready-to-use.
- Limit possible operator contamination
- Save operator time and sample with better efficiency, avoiding cleaning, autoclaving and validation
- Have on hand to easily present a certificate of sterility assurance to a regulatory authority
- Have on hand in the case of autoclave failure so sampling is not disrupted
- Have on hand when sampling demands are especially high
