

quickMIC[®] The Future of Rapid AST Testing

Rapid antimicrobial susceptibility testing (AST) is transforming infection treatment by delivering results in hours instead of days. This gets patients on the appropriate therapy much sooner compared to standard laboratory methods, reducing unnecessary broad-spectrum antibiotics.

The QuickMIC[®] system delivers rapid AST with precise MIC values in a record time of 2-4 hours, offering significant improvements in speed, accuracy, and reproducibility over traditional methods.

The QuickMIC[®] system is classified by the FDA as a breakthrough device. The system is for Investigational Use Only while going through the FDA-clearance process.

The QuickMIC[®] is manufactured by Gradientech[®] and exclusively distributed by Hardy Diagnostics in North America.
