LIBERATOR II™ TACTICAL HEADSET

Safariland's TCI™ Liberator II™ tactical headsets provide exceptional communications, electronic hearing protection, and situational awareness in demanding, conflict environments. Designed to meet the requirements of special operations forces, Liberator II tactical headsets have been deployed by defense, law enforcement and security teams in Afghanistan, Iraq, and around the world.

Low-profile earcups ensure the Liberator II headsets can be worn comfortably under MICH, ACH, PASGT, Ops-Core, and other ballistic helmets. TCI's exclusive Digital Threat Compression Technology (DCTC) compresses and reduces harmful sound levels to safe levels. For optimal environmental awareness, TCI's Digital Situational Awareness Enhancement (DSAE) technology reproduces 360 degrees of ambient sound.

Engineered to military durability standards, the Liberator II tactical headsets are robust, and designed with a dual-layer waterproofing process for exceptional protection of electronic components. The headsets achieve an industry-leading 600-hour performance with two AAA batteries, to support operator safety and mission completion.

FEATURES

- TCI hearing protection with Digital Threat Compression Technology
- State-of-the-art REV-7 Digital Sound Processing, supporting noise compression and situational awareness
- Single radio capable; supports military, law enforcement, first responder communication systems
- Noise canceling MIL Std 810G tested Electret or Dynamic boom microphone, left or right boom mic mount
- Industry-leading 600-hour battery life on two AAA batteries, waterproof battery compartment
- Comfortable fit with MICH, ACH, OpsCore, and other commonly used ballistic helmets
- Quick disconnect single-button, Push-to-Talk (PTT) assembly included
- BTH Behind-the-Head or Standard OTH Over-the-Head suspension, can also be mounted to ARC rail
- Single headset cable w/ NATO wiring
- Berry Compliant Transport Bag included
