579 GLS PRO-FIT BELT CLIP

The 578 GLS™ Pro-Fit™ series concealment holsters, part of the 7TS™ product line, offer exceptional retention with multi-fit capability and precision injection-molding, making them extremely lightweight and durable. A handful of sizes fit more than 225 firearm models.

The proprietary GLS (Grip Locking System) retention features a middle finger release of the handgun from the holster. Once a proper shooting grip is obtained, the middle finger will sit directly on the lever of the GLS. With this ergonomic design, as the gun is drawn, the lever is depressed, and the firearm can be seamlessly and fluidly drawn from the holster.

These holsters are constructed of SafariSeven™, a state-of-the-art nylon blend, a material completely non-abrasive to the firearm's finish. SafariSeven has very high heat and cold tolerances and are structurally sound from -50° F to 300° F.

The holster interior has raised stand-off surfaces which create air space around the handgun allowing dirt and moisture to quickly clear any contact with the gun. It features a matte finish and can be maintained with a simple scouring pad. Further, with SafariSeven, the holster can be submerged in water indefinitely and still maintain shape and function.

These durable, lightweight holsters also offer a lower profile and compact design, ideal for concealment. The low cut sides allow for a rapid draw and easy re-holstering.

MULTI-FIT DESIGN WITH GLS RETENTION

FEATURES

- GLS (Grip Locking System) secures the handgun once holstered; retention is deactivated with the middle finger as the user acquires a standard shooting grip on the gun
- Holster is user customizable and designed to fit multiple firearms in one holster
- SafariSeven body is proprietary nylon blend non-abrasive to a firearm's finish, and maintains very high heat and low cold tolerances
- Low-cut and compact design make concealment easy while also allowing for a quick draw
- Available in SafariSeven Plain Black and FDE Brown finishes

BELT ATTACHMENT OPTIONS:

- 578 - Injection-molded paddle design is highly concealable and rides close to body; also includes 1.5" (38mm) to 2.25" (58mm) belt loop
- 577 - Injection-molded belt loop is user adjustable for cant and can be worn cross draw; 1.5" (38mm) to 2.25" (58mm) width belt loop
- 576 - rides 1" higher than standard belt loop with a 1.5" (38mm) belt width
- 579 - Fits belt widths from 1.5" (38mm) to 2.25" (58mm)
