The toaster is fitted with two independent control panels. Each control panel controls 2 slots to allow different settings to be used for the available functions.

- Defrost function button (8 - Fig. B)

This function is useful when toasting frozen bread. During toasting, the defrost button lights up to indicate that the toasting cycle is active.

- Browning control knob (9 - Fig. B)

This control is used to select one of the 6 browning levels or the Reheat function. During toasting, the central LED lights up to indicate that the toasting cycle is active.

- Browning indicator (10 - Fig. B)

The Browning indicator shows the selected browning level or the selected Reheat function.

The Stop button can be used to cancel or stop the toasting cycle at any time.

- Bagel function button (12 - Fig. B)

This function allows you to toast one side of a bagel, or any other kind of bread, without toasting the other side. During toasting, the Bagel button lights up to indicate that the function is active.

- Reheat function (13 - Fig. B)

This function is used to reheat cold toast or to continue a toasting cycle if the result is not satisfactory. During toasting, the central LED lights up to indicate that the toasting cycle is active.

3 Use

The appliance can be used safely at both 50 Hz or 60 Hz without making any setting change.

Tips and suggestions

Your toaster has a 3-prong grounded plug. To reduce the risk of electrical shock, this plug will fit in an outlet only one way. If the plug does not fit in the outlet, contact a qualified electrician. Do not modify the plug in any way.

3.1 Before first use

- 1) Remove all stickers and any packing or printed material that might have fallen inside during shipping or handling. Do not probe inside the toaster with a metal object.
- 2) Clean the outside of the toaster with a damp cloth.
- 3) Use the toaster for the first time without slices of bread in it.
- 4) Turn the browning control to the maximum position and press the breadlift down. This will burn off any dust that has fallen into the toaster during production or transport.

During first use there may be some smoke and odors.

Tips and suggestions

- Remember that the type of bread you use will impact the toasting times. The fresher the bread you use, the longer it will take to toast. Different types of bread and different moisture contents may require different browning levels. Different kinds of bread have different moisture content and will require different browning levels. For example, fruit breads generally toast much quicker, and freshly baked breads will take longer as they have a greater moisture content.
- The first batch of toast you make enables the heating elements to reach the correct toasting temperature. Please note that further batches of toast could take less time.

For best results:

- Toast only one type of bread at a time.
- Toast bread slices of the same thickness.
- Use bread slices no thicker than 2.5 cm.
- If you are using handcut bread please try to cut slices as evenly as possible. Uneven slices will toast unevenly.
- Be aware that if you use very thin or broken slices of bread, they will burn.

Warning

If the appliance is not connected to the mains power supply, the breadlift will not lock.

3.2 Operation

If necessary, shorten the cord by wrapping it under the base (5 - Fig. A).

- 1) Plug in the toaster.
- 2) Insert the bread in the slot (Fig. C).
- 3) Remember that as bread is not normally square, you may need to turn the bread on its side to get a better fit and optimize the toasting surface area.
- 4) Choose the desired browning level (Browning levels 1 to 6, from light to dark) or the "Reheat function" (13 - Fig. B).
- 5) Push the lever down until it clicks to activate the toasting cycle (Fig. C).
- 6) If needed, select the additional functions Defrost (8 - Fig. B) or Bagel (12 - Fig. B) or the two combined.
- 7) The heating element now switches on. The bread is centred automatically for even toasting.
- 8) The toasted bread will pop up automatically when the toast is ready.
- 9) If the toast is not sufficiently browned and requires more time, press the Reheat button to extend the toasting time.

3.3 Special functions

labelling Cancellling / stopping the toasting cycle

At any time, it is possible to cancel or stop the toasting cycle by pushing the button (11 - Fig. B).

labelling Defrost (8 - Fig. B)

This function gently defrosts frozen bread and toasts it to the selected level of browning.

To use the function, simply insert the bread into the slot, select the required level of browning, push the breadlift downwards until it clicks and then press the defrost button: the indicator light of the button will turn on. The toasting time will be automatically increased to allow the bread to defrost and brown correctly. The light of the Defrost button will switch off when the toast pops up automatically.

labelling Bagel (12 - Fig. B)

This special function is ideal for toasting one side only, for bagels, flat bread, English muffins, baguettes, etc. To use the function, simply insert the bread into the slot with the side that you want toasted facing the outside. Select the desired browning level, press the breadlift down until it clicks, then push the Bagel function button, which will light up. When the bread is toasted, it will pop up automatically and the Bagel function light will switch off.

labelling Reheat (13 - Fig. B)

This function is used to reheat cold sandwiches or to continue a toasting cycle if the result is not satisfactory. To use the function, simply insert the bread into the slot, select the Reheat function on the browning control knob and push the breadlift downwards until it clicks. The central light of the browning control knob will light up. When the toasting cycle has finished, the bread will pop up automatically and the light of the control knob will switch off.

Defrost or Reheat can be selected at the same time as the Bagel function.

3.4 Using optional accessories (6, 7 - Fig. A)

Accessories may differ according to the model.

Sandwich racks (6-Fig. A)

The sandwich racks are ideal for toasting filled sandwiches, or for easier handling of smaller items such as bagels.

Tips and suggestions

- Lightly butter the outside of the bread, this prevents burning and helps with the warming of the filling. Do not butter the inside of the sandwich.
- For best results use thinly sliced ingredients and finely grated cheese.
- For best results use cold meat (ham, turkey etc.) at room temperature, not straight from the refrigerator.
- Do not overfill the sandwich.
- If using a low browning setting, the filling might not heat through correctly. In this case, at the end of the toasting cycle, leave the toast inside the toasting slot for longer, or extend the time by using the reheat button.

How to use (1 - Fig. D):

- 1) Open the rack with the handles.
- 2) Place the sandwich into the rack.
- 3) Close the sandwich rack handles together to grip the sandwich.
- 4) Insert the sandwich rack into the slot and select a browning level. If a little more browning is required, you can use the reheat button to extend the toasting time.
- 5) Push the breadlift downwards until it clicks to activate the toasting cycle.
- 6) Remove the sandwich rack from the toaster when the toasting cycle ends.

Bun Warmer (7 - Fig. A)

The bun warmer is useful for warming small bread rolls, flat bread or pastries.

How to use (2 - Fig. D):

- 1) Place the bun warmer on top of the toaster, making sure that the wire feet at the ends fit into the slots of the toaster.
- 2) Place small bread rolls, flat bread or pastries on top of the warmer and set the browning level to "1" (no higher).
- 3) Push the breadlift downwards until it clicks to activate the toasting cycle.

Cleaning and maintenance/What to do if...

4 Cleaning and maintenance

4.1 Cleaning the surfaces

To keep the surfaces in good condition, clean regularly after use. Let them cool first.

Never use products that contain abrasives or chlorine-based acids.

Pour the product onto a damp cloth and wipe the surface, then wipe over thoroughly and dry with a soft cloth or a microfiber cloth.

Tips and suggestions

If grease or oil splatters on the toaster, wipe it off immediately using a clean, damp cotton cloth.

Any other servicing should be performed by an authorized service representative.

4.2 Food stains or residues

Do not for any reason use steel sponges or sharp scrapers as they will damage the surfaces.

Use ordinary, non-abrasive products and wooden or plastic tools if necessary. Wipe thoroughly and dry with a soft cloth or microfibre cloth.

4.3 Cleaning the crumb tray (Fig. E)

- 1) Push the crumb tray (4 - Fig. A) to unlock it, then pull to slide it out and empty it. Empty the crumb tray after each use.

Tips and suggestions

The crumb tray is hand-washable. Always dry the tray thoroughly before putting it back in the toaster.

- 2) Put the crumb tray back in the toaster. Press it in firmly until it clicks into position. Do not use the toaster without the crumb tray in the proper position.
- 3) Do not use any toaster cover.

4.4 Cleaning the optional sandwich rack and bun warmer

Wash the sandwich rack and bun warmer by hand in warm soapy water. After washing, rinse and dry them thoroughly with a soft cloth.

What to do if...

If your toaster should fail to operate, check the following:

- Check that the toaster is plugged into a grounded 3-prong electrical outlet. If it is, unplug the toaster.
- Plug in the toaster.
- If the toaster still does not work, check the household fuse or circuit breaker.

If the problem cannot be solved:

- See the Smeg Warranty and Service sections.
