HOW TO CARE FOR YOUR BEAUTIFUL ABBYSON LIVING FURNITURE

ROOM TEMPERATURE SETTINGS

It is important to keep the home or office in which your furniture is placed properly humidified. Natural products prefer a reasonable level of temperature and humidity. Furniture should not sit near heating or air conditioning registers. These remove necessary moisture from your furniture and dry it out, causing potential cracks or splits.

WOOD CARE & HANDLING

**Natural
Wood Grains**

Wood is a natural product. Sun bleaching will occur when wood furniture is exposed to sunlight. This will cause darker finishes to lighten and sometimes cause lighter finishes to darken. For this reason, try to avoid placing furniture in direct sunlight and rearrange accessories from time to time to prevent spot bleaching.

For daily maintenance, use clean and soft cotton rags or cloths to wipe off dust on the surface along the grains. Never use damp rags and never use anything with a hard surface to rub onto the furniture. Always keep the surface clear of any acid or chemical substances.

In order to avoid any damages, defects or issues from occurring, refrain from stacking large and/or heavy objects on top of the furniture.
