The RFID Journey with

Sensormatic
by Johnson Controls

Sensormatic Solutions covers all steps of the RFID item-level tag journey from Service Bureau through supply chain to store

1

Manufacturer orders tags from Sensormatic. Service Bureau.

2

Service Bureau prints and encodes tags

RFID tag is received by the manufacturer and attached to merchandise

3

Distribution Center

Inbound Verification
Confirm inbound shipments through guided receiving

Tagging Verification
Verify tag encoding compliance, print & encode tags, kill tag, or locate merchandise

Pick & Pack
Perform RFID-based pick & pack or just validate the packed RFID tagged items against a list of ordered items

Shipping Fulfillment
Quickly fulfill e-commerce orders

Outbound Verification
Confirm outbound shipments through quick guided shipment

4

Store

Backroom Visibility
Efficient stocking and receiving of merchandise for great operational efficiency on store fulfillments

Stock Room to Sales Floor Replenishment
Anchored on the high item-level stock accuracy, make optimized replenishment lists for associates

Receiving Visibility
Leverage RFID fixed infrastructure or mobile devices to verify inbound shipments (also available for outbound)

On-Floor Visibility
Item-level RFID enables near real-time and highly accurate inventory reducing out-of-stocks and overstock situations, ultimately improving sales and minimizing revenue loss

Returns Management
Prevent counterfeit goods from entering the supply chain via product returns

POS Transaction Visiability
Management of RFID items at the point of sale for higher inventory accuracy and help combat sweethearting and fraud

Storefront Visibility
Improve shrink intelligence at all exits with actionable reporting and analytics

Omnichannel Fulfillment
Trust highly accurate inventory stock levels to convert stores into mini fulfillment centers

Self-Checkout (SCO)
Enable a frictionless check-out experience without high increases in shrinkage
