

A Sustainable Path Forward

SENSORMATIC SOLUTIONS SUSTAINABLE AM LABEL

Sensormatic Solutions is committed to sustainable product designs and the use of eco-friendly materials that promote conservation, including waste, carbon emission, and energy reduction.

Our customers can see sustainability reflected in the products we produce and the solutions we provide. The Sustainable AM Label is the world's first paper-based, made with renewable materials, acoustic-magnetic (AM) label that helps reduce waste and improve recyclability while safeguarding against shrink.

Designed with Sustainability in mind

Sensormatic Solutions Sustainable AM Label makes it easier for retailers to answer the call to pursue responsible practices. That's because material innovations integrated within the label helps reduce waste during Sensormatic Solutions manufacturing processes.

Regulatory compliance

It helps meet the European Union directive, which prohibits the use of certain single-use plastics.

Manufactured with renewable materials

The label is created using Forestry Stewardship Council (FSC)-certified material, fabricated using eco-friendly manufacturing processes, and shipped in recyclable packaging. Sensormatic Solutions focused on plastic-free renewable materials rather than recycled plastic for a more positive impact on the environment.
