PURPOSEFULLY BUILT, RELIABLY SAFE

SafeRack is committed to workplace safety. This is why we manufacture durable and long-lasting aluminum safety products including marine gangways, dock gangways and custom marine ramps for safe access to and from barges and ships. Dock gangways (also known as a ship brow or accommodation ladder) are the last thing an operator comes into contact with before stepping onto a vessel and the first thing they come into contact with when going back to shore, so they need to be rugged and dependable, but most importantly, they need to be safe. SafeRack's aluminum gangways for barge access and ship access deliver precisely that. Our advanced, corrosion-resistant aluminum marine gangways are designed for OSHA-compliant worker safety, durability and reliability in marine environments and are built-to-order to your required length and specifications. And they're built to last, too. Constructed of durable marine-grade aluminum or galvanized or stainless steel, our vessel gangways are available in sizes up to 50' in length and 5' in width. Special-purpose gangways exceeding those measurements can also be built.

PRODUCT FEATURES

Heavy-Duty

Aluminum design results in a longer-lasting solution that requires less maintenance

Stronger Design

One-piece design reduces welds and failures

Expedited Access

Quick order processing, readily available replacement parts and fast delivery

Variety of Sizes

Variety of sizes available with special-purpose gangways exceeding standard measurements created to fit your needs

THE ULTIMATE ALUMINUM DOCK & SHIP GANGWAYS

Marine gangways can be complicated things. Sure, sometimes there's little movement and the risks are low, but other times, there are multiple axes of rotation, sweeping currents, raising and lowering elevations from tides or river conditions, changes in load, etc. When your operators' lives depend on it, you want the very best in fall prevention, not just fall protection. No matter the risk factor for your site, there's no acceptable risk when lives are on the line. Use the best, longest lasting gangway you can get, and with the best service in the industry.

ADDITIONAL FEATURES

Multiple Wheel Options

Choose from Tilt and Roll multi-directional wheels, swivel casters, fixed wheels, or a dock roller as standard. If you have a special application, we can design something to meet your needs

Configured for Your Application

Can be used in a fixed, mobile, or stand-alone application

Variety of Walk Surfaces

Choose between flat ramp, diamond tread, stamped aggressive tread, cleats, extruded curved tread, self-adjusting stairs, or other, non-standard walk surfaces

Lift Options

If you need your gangway to be fixed and not stand-alone, you can use your own crane, or choose from counter-balanced springs, hand-winch operation, pneumatic or hydraulic cylinders, or a pneumatic, hydraulic, or electric winch

Handrail Design Strength

Our SG and TG series gangways use handrails that are laser cut from 2" square tube and robotically-welded from continuous pieces to provide structural stability. Self-Adjusting Stair walk surfaces use round tube
