Mobile Work Platform

The MP Series is a highly mobile work platform designed to bring the workspace and stability of a fixed platform to a rolling stair mobile unit. With a large 9' x 3' work platform, it can securely and safely accommodate multiple operators and their equipment and parts.

The powder coated handrails, full size 45° rise stair stringer, and standard width and depth steps meet OSHA specifications for mobile work platforms, while the lightweight aluminum construction maintains single user mobility.

MP SERIES

Mobile Work Platform

▲ Full-size, powder-coated handrails.

▲ Six square feet of work area is roomy enough for an operator and equipment.

More Secure

The D-shaped handrails allow for a stronger surface to surface contact once in place.

Mobility

The MP Series is easily maneuvered by a single operator, and the 360° swiveling casters allow precise positioning.

Locking casters prevent both swivel and roll, while in operation, yet the soft no-flat tires roll easily over asphalt and gravel.

Configurability

Optional removeable handrails give the MP Series mobile platform unparalleled versatility.

Remove the end handrail, one side handrail, or remove an entire side to access a flatbed trailer.

Each handrail slides securely into and out of its retaining sleeve without tools, allowing operators to reconfigure the platform in the field.
