

## TRUCK AND RAILCAR BLENDING, METERING AND LOADING SKIDS

SINGLE  
PRODUCT OR  
COMBINATION  
SKIDS

TOP OR  
BOTTOM  
LOADING

### Blending, Metering and Loading Skids

Our skids feature a sturdy, hot-dipped galvanized steel base and can be used for both loading and unloading applications. They're ideal for either top or bottom loading applications and for truck or rail operations. Our skids accommodate all major brands, including Smith Meter, Daniels, Brooks and Liquid Control. In addition, SafeRack can provide on-site meter proving and installation.

### Petroleum and Chemical Transloaders

Our portable railcar and truck transloaders are designed to increase safety and uptime. They include features that protect your bottom line and the surrounding environment, such as grounding and overfill prevention, RTD temperature sensors and emergency e-stops. And because we have several standard configurations that can be shipped out immediately, you'll get the solution you need exactly when you need it.

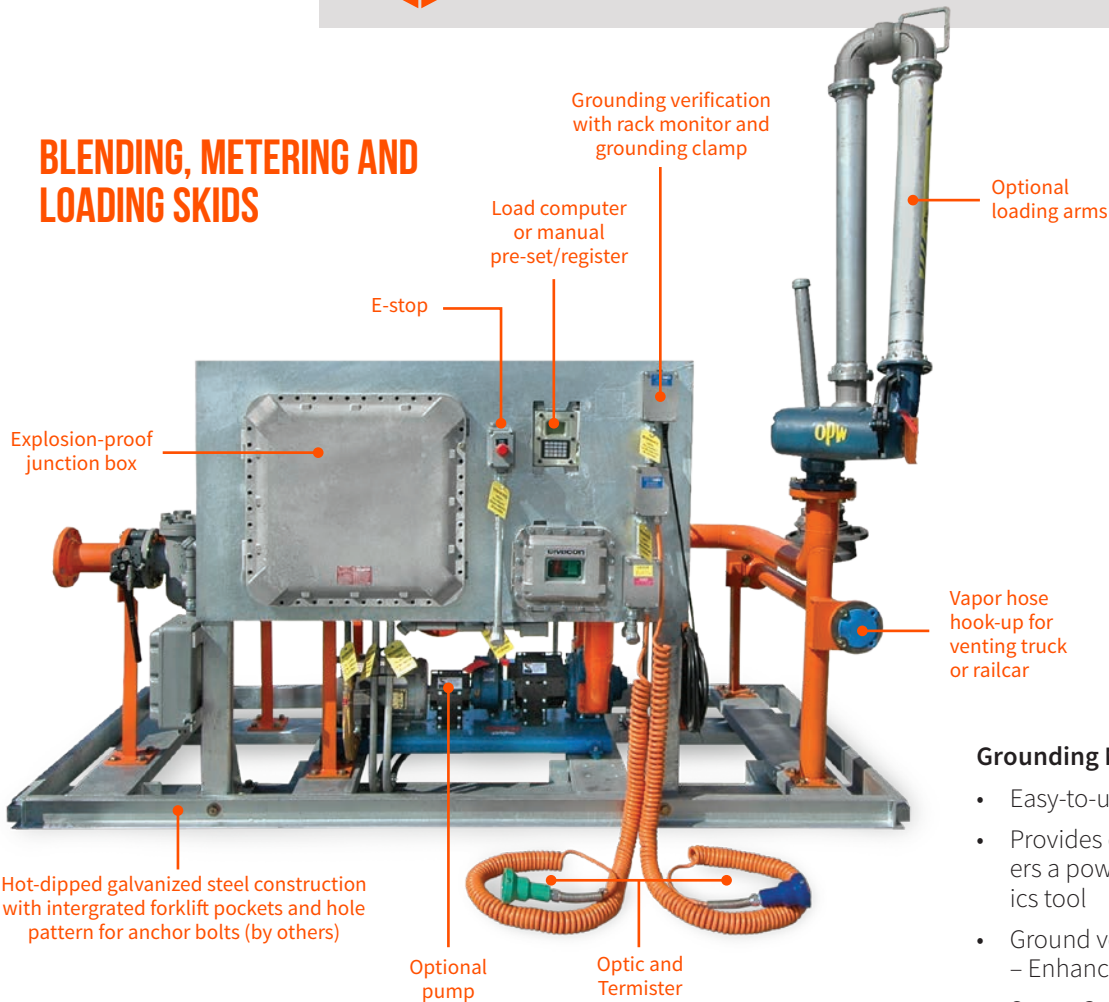

However, if you need a more tailored solution, we can quickly customize your transloading unit to meet your application's specific needs. So whether you need a mobile transloader designed for bottom unloading or loading, metering and blending capability, pumps or hoses, we can help.

### Features

- Single-Product Skids
- Combination Blending Skids
- Pump and Loading Arm Options
- Loading or unloading applications
- Top or bottom loading
- Truck, railcars, marine skids
- SafeRack can provide on-site meter proving and installation
- Fits Smith Meter™, Daniels™, Brooks™, Liquid Controls™ and other brand names
- Single stream or inline blending
- Load computers with card readers, printers and software capabilities
- Overfill and grounding that tie into skid
- RIN specifications

## BLENDING, METERING AND LOADING SKIDS

## RECOMMENDED USES

- Specialty Chemicals
- Asphalt
- Sulfuric Acid
- Gasoline
- Diesel
- Ethanol Blending
- Methanol
- Transloading
- LPG
- Biodiesel Blending
- Specialty Chemicals
- Ethanol Loadout
- Glycerine Loadout

## Grounding Monitors & Controllers

- Easy-to-use software
- Provides operators, supervisors and owners a powerful safety and business analytics tool
- Ground verification and monitoring – Enhances safety
- Smart Ground Controller – Enforces standards
- Improves efficiencies
- All of these features add up to the world's first and only all-in-one ground controller that not only enforces proper grounding and connection procedures at the loading rack but also provides a log of those events for maximum visibility to management.

## For elevated applications or applications that demand automation, SafeRack transloading options include:

- Mobile loading and unloading skids
- Access stairs and platform with OSHA handrail, midrail and toe board
- Gangways with fall protection cages
- Loading arms
- Computerized load controller
- Terminal automation systems

## Truck & Railcar Features

- Truck side features grounding protection, overfill monitoring and metering for custody transfer
- Railcar side allows options for unloading as well as safe access to hatch area of railcar
