Tool Crib for Organization

Build tool cribs of any size and configuration with WireCrafters Style 840 Woven Wire Partition System. Unlike chain link fence or other alternatives, wire partitions are fully framed wire mesh panels that bolt together section by section. Most maintenance departments can install this modular partitioning product without the use of special tools or equipment; allowing for an easy installation of tool cribs and security cages.

Using our wire partition panels, you may construct tool crib walls and ceilings from the same modular sized panels. The partition panels may be stacked to your desired tool crib wall height, and the panels easily bolt to posts using standard hand tools. A full line of hinged, double hinged, and sliding doors are available for tool cribs, and the open but secure design allows free circulation of light, HVAC, and fire suppression systems throughout the secured areas.

Features

- Twenty standard sized panels 4' or 5' high, by 1' to 10' wide
- Standard size panels work as ceilings and walls
- Hinged, double hinged, sliding, and vertical rise doors available
- Sliding doors with patented tamper resistant latch mechanism
- Angle frame design with clear access to hardware, allows for faster installation
- Inaccessible assembly hardware from the secured side of the partition
- Standard 3/8" mounting hardware
- Heavy duty options available
- Panels may be ordered with any mesh, sheet metal, or clear polycarbonate
