unsupported style

By-Pass Loading Arms

OPW By-Pass Loading Arms are designed to be a low-cost alternative to arms constructed of Hastelloy, Alloy 20 and other specialty metals used to transfer hydrochloric acid and other corrosive chemicals.

Unique Solutions, Unrivalled Expertise.

We understand that no two loading projects are alike. Given the range of products transferred between terminals and rail or road vehicles, some projects warrant a more custom solution. And no one has more experience than SafeRack when it comes to producing custom loading and unloading solutions.

Key Features

- Cost-effective and easy to operate
- Can be configured as a 'hose handler' to greatly improve hose loading operation
- Excellent alternative for 'Food Grade' applications where swivel joints cannot be used
- Liquid bypasses inlet swivel joint; no metal-wetted parts
- Available in 2", 3" & 4" sizes
