

SAFERACK SAVKOLOCK MECHANICAL SAFETY LOCKDOWN

Engineered for the toughest conditions

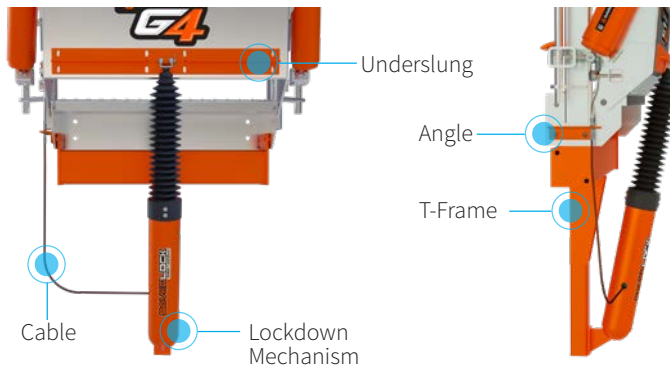

Our new all-mechanical design performs flawlessly in cold climates—guaranteeing reliable protection and total confidence.

SavkoLock: a name rooted in protection, delivering a positive-lock gangway safety system that stops unexpected lift and dangerous gaps.

SavkoLock reflects SafeRack's commitment to partnership and protection, drawing its name from the meaning of "protector" in the family name of our Canadian partner, Rob Sawchuk (Savko). In recognition of Rob's leadership and dedication to keeping operators safe on every gangway, SafeRack combined "**Savko**" with "**Lock**" to signify a purpose-built device that positively locks gangways in place, helping prevent sudden movement, unsafe gaps, and dangerous falls.

Features

- Made in the USA
- Lower cost
- Rapid deployment
- Interchangeable with our previous SafeLok solution
- Mechanical with fewer moving parts
- Simple installation
- Operation in low ambient temperature environments
- Greater longevity
- In-stock, ready to ship
