SafeRack is the world's largest manufacturer and integrator for railcar and truck loading facilities. The G4 Series gangway systems are designed, built and installed as safe, ergonomic and efficient loading platform options, for small and large businesses throughout North America.

Backed by years of experience with a hands-on, collaborative approach, these patented access gangways and loading ramp systems were created for maximum productivity and lower maintenance solutions for both railcar and truck loading needs. Built using heavy-duty aluminum, with the ability to withstand whatever your job or Mother Nature can dish out. Most importantly, our G4 Series gangways are delivered on time, every time, within budget and without hassles.

Features

- **Consultative Approach**
Optional site visit, to develop a system that's right for you
- **Expedited Access Gangway Delivery**
Quick order processing, readily available replacement parts and fast delivery
- **Highly Engineered Access Gangways**
Advanced, innovative designs are proven in the field to be easy to use and provide better ergonomics
- **Proudly made in the USA**
- **Durable**
Heavy-Duty Aluminum Construction using fewer parts, less welds for a stronger, longer-lasting less maintenance solution
- **Specialized Applications**

SFR GANGWAY FLAT RAMP STYLE

- Available in 24", 36", 48", 60" and 72" widths and numerous lengths
- Aluminum, galvanized steel or stainless steel
- Heavy-duty upright to support optional safety cage

A Simple, Sturdy Design. Our SFR gangways are flat ramp designs that feature a slip-resistant walk surface. Popular for hopper car and some truck applications, this model works best when there is little to no difference between the platform height and vehicle height. All models come standard with rubber bumpers for vehicle protection, machine-quality pivot points and a hot-dipped galvanized steel base tread.

FRT GANGWAY FLAT RAMP TELESCOPING

- Telescoping extension and handrails
- Available in 24", 36", 48", 60" and 72" widths and various lengths
- Aluminum, galvanized steel or stainless steel

Slip-Resistant and Long-Lasting. The FRT is a flat ramp model popular with railcars. It features a slip-resistant walk surface and, with the use of the telescoping extension, eliminates gaps on narrow railcars. Telescoping top handrails come on all models without the safety cage option.

Regardless of model, each FRT gangway is constructed with 1" stainless-steel-bearing-quality pivot rods through its entire length, as well as with machine-quality pivot points. In other words, they're built for both safety and longevity.

SAS GANGWAY SELF-ADJUSTING STAIR

- Extra-strong tube design for safety cage mounting
- Available in 24", 36", 48", 60" and 72" widths and numerous lengths
- Working range of 40-degrees below and 45-degrees above horizontal

Safe, Rugged and Easy to Use. Built to articulate and self-level, SafeRack's SAS gangways are designed to accommodate varying heights of vehicles. And they're designed to last, too. With a one-piece stair design, welds are reduced and failures are virtually eliminated. Still, despite being extremely rugged, our SAS gangways are easy to use, as the spring counterbalance requires minimal effort. On top of that, the self-adjusting stair gangways can easily be retrofitted to replace your old, unsafe gangways.
