

SAFERACK CERTIFIED GANGWAY SAFETY INSPECTIONS

Safety, compliance, and maintenance inspections.

A solid maintenance plan begins with a good thorough inspection of the gangway equipment in service. An annual inspection of your access gangway is crucial to ensure that the equipment is functioning properly and is providing maximum safety as it was designed. SafeRack in partnership with our sister company, SafeRack Construction Services, offers an annual gangway safety maintenance inspection as part of our follow-up service for your SafeRack Gangways.

SCS, LLC has membership and certification with the National Association of Reciprocal Safety Councils. SCS holds accounts with ISN and Avetta. SCS Field Technicians are certified Competent Person trained. SCS will also entertain matching customer requirements should our standard not be adequate for site entry.

SafeRack On-site Inspection: *Plan ahead of regular busy seasons, contact your SafeRack regional representative for an on-site inspection of your SafeRack safety equipment.*

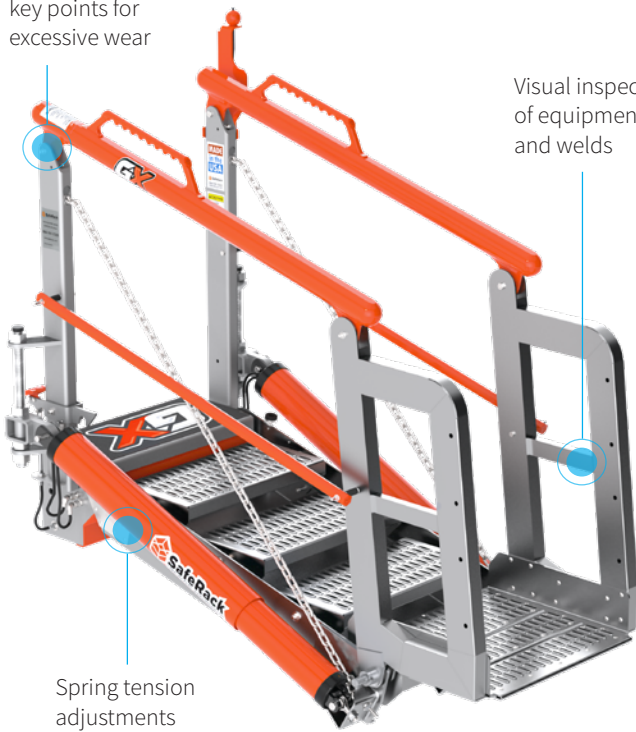

Inspection key points

- Certified competent person inspectors
- Visual inspection of equipment and welds
- Spring tension adjustments
- Overall performance inspection

| Two (2) Eye Bolt 3/8" x 1-1/4" with Hardware |
| Two (2) Rope with Rope Clamps (cut to fit in field) |

Frequently Asked Questions

What are your inspection hours onsite?

Monday through Friday, 7 am to 7 pm, maximum of 8 hours on site. Weekends at the time and a half plus any incurred expenses. If the customer requires more than 30 minutes per site-specific safety training session, an additional cost will be incurred by the customer.

How long does it take to inspect a gangway?

On average it takes between 30-45 minutes to inspect one gangway unit, depending on manual or pneumatic operations and access to site.

What equipment do I need to supply SafeRack?

If heavy equipment is needed to perform inspection, SCS, LLC can provide this portion of the service at a charge. The Field Technician will bring their own standard PPE and body harness.

SCS, LLC provides standard PPE to include hard hat, steel toe boots with heel, FRP outer layer with long sleeves, gloves, safety glasses and hearing protection. Any additional PPE is at cost plus 20%. Any additional cost for specialty PPE is incurred by customer.

What safety record do you have?

Our EMR is currently .95 and PRIP is currently .00. This may vary throughout the year due to incident/accident/injury reporting and arbitrary assessments occurring from reporting entities.

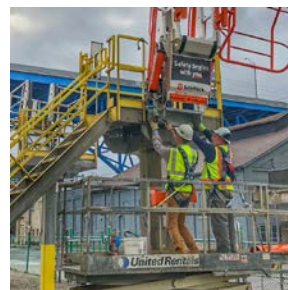

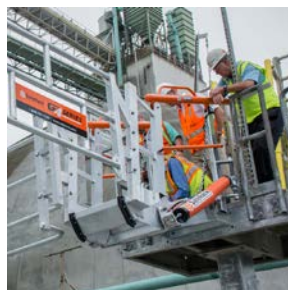

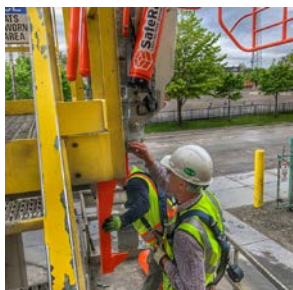

What are the common findings during the inspection process?

Damage due to misuse, accelerated wear due to lack of preventative maintenance, damage due to drive off without properly storing/retracting equipment. Replacement parts vary from nuts and bolts to complete replacement recommendations.

What happens if you come up with parts that need replacing?

Customer orders parts based on written analysis/replacement parts recommendation provided by SCS. Customers may schedule return visit at additional cost for SCS technicians. Customer may also install replacement parts and call for follow up inspection at additional cost.

Should there be a work stoppage during inspection for any reason customer will incur cost of full day per contract or PO.
