AirSpeed® MINI PAK'R® V3

Renew™ Multitube

- Multifunctional
- Air Transfer Technology
- RFID Technology

These AirSpeed Renew air bags are created out of 50% Post-consumer recycled content. It is made from products that served end-users, after which it has been recycled. The Renew Multitube film is transparent, because the resins used in these films originate from very clean sources, such as waste from supermarkets. This allows us to create an – almost – transparent air cushion out of post-consumer waste. The information is printed on each air cushion with a water-based ink, so it's not harmful to the environment.

The Multitube is a solution when a variety of applications is required. It allows a high quality protection thanks to the air-transfer technology, which improve shock absorption. Each air cushion is composed of 8 rectangular shaped pucheshes which offer a higher flexibility of protection.

- Size cushion: WxL = 400x130 mm
- Thickness: 19 micron
- Material: LDPE
- Complies with EN13427 standard for packaging and packaging waste
- Product code: 4093446

Machine & Accessories

The **MINI PAK'R V3** is a compact and versatile machine producing air cushion on-demand. Compatible with Integrated Systems and a large range of accessories, the machine is the right solution for warehouses and distribution centers with multiple packing tables. Using RFID, the film settings are automatically selected, which make the machine easy to use.
