- Various features

Pregis

Press Printing

- Custom press printing available for all bag types and sizes.
- Up to 8 PMS colors, including photographic images.
- Printing on one side, both sides and/or inside the bag is possible.

Features

Bags can be equipped with features like an **easy-tear opening** perforation, **hang holes** for retail displaying purposes, various **air vent or pin holes** to release air and decrease the volume of the bag. Next to a **return closing strip**, to make the bag suitable for return shipments, we also offer a **reclosable** strip that allows the bag to be used as a container for small parts.

Blends

Our pallet of blends is one of the widest available in the market. Each blend is compatible with our total bagging equipment range without further adjustments.

Sharp's LD based blends are developed with the environment in mind without compromising customer requirements; thinner gauged blends offer **high clarity bags** while providing excellent strengths. The **Mailer bag** is designed for use as a shipper, meeting the requirements of carriers and high durability. **VCI**, **Anti-static** and **gamma-patient** blends are some of the exotic blends that we offer.

Sustainability

RE-DUCE

- Reduce the shipping volumes (DIM weight).
- Reduce consumption of void-fill material.
- Reduce returns by damaged boxes – waterproof bags, non-tear.
- No additional paper label -> printing directly onto bag.

RE-USE

- Mailers are suitable as return package with use of a reclosing tape.

RE-CYCLE

- Standard PE bags are 100% recyclable throughout the whole recycling process.
- Produced from virgin PE, non-contaminated plastic.
- Mailers available with minimum 30% recycled content.
- Sharp bags are easier to recycle due to printing directly onto the bag

Sample material upon request available.
