

Pregis

AirSpeed® HC Renew™ PCR

80% post-consumer recycled content

Pregis AirSpeed® Hybrid Cushioning (HC) Renew PCR elevates sustainable packaging as the **only high-pressure air cushioning solution with 80% post-consumer recycled content (PCR)**. This on-demand inflatable solution is where sustainability meets premium cushioning protection.

SET SUSTAINABILITY STANDARD

- **Industry First:** Only high-pressure air cushioning film with 80% PCR
- **Fulfill Sustainability Goals:** Demonstrate sustainability commitment, meet consumer demand for sustainable packaging
- **Sustainable messaging:** Printed with 80% PCR and How2Recycle® Store Drop-off label

DELIVER UNMATCHED PROTECTION

- **Uncompromised Protection:** Same level of protection and durability
- **Premium Cushioning:** Proprietary square pattern for superior shock absorption

DECREASE ENVIRONMENTAL IMPACT

- **Protect the planet:** Reduce carbon emissions by over 40%, fossil fuel usage by 65% and water usage by 70%*
- **Minimize Landfill Waste:** Divert consumer products from landfill

ELEVATE CIRCULAR PACKAGING

- **Close recycling loop:** Post-consumer recycled content keeps materials in use that have completed their lifecycle, extending the life of plastics
- **Recyclable:** Designated with a How2Recycle® Store Drop-off label

Recycled Content: Closing the Loop for a Sustainable Future

Recycled content promotes sustainability from two sources:

- **Post-Consumer Recycled Content (PCR):** Materials that have been used by consumers and recycled into new products
- **Post-Industrial Recycled Content (PIR):** Waste generated during the manufacturing process and reused

While both important for sustainability, **PCR closes the loop on sustainable packaging by reducing consumer landfill waste.**

* Compared to virgin resin cushioning in a lifecycle analysis.
