EASYPACK® Accessories

Coiler Lite

- Consistent quality
- Space saving
- Easy to use
- Packer friendly

Paper coils are an invaluable way of protecting fragile and heavy products alike. However, creating coils by hand can be difficult, time consuming and delivers inconsistent results. The Pregis Coiler Lite rapidly produces consistent coils with ease. Its small footprint minimises the impact on your working environment and your team are protected with its safety features.

Benefits

Consistent Quality

The Pregis Coiler Lite is used in combination with the Pregis Packmaster Pro or Packmaster Pro Fanfold. It is built to the same robust quality and reliability standards. The Coiler Lite has unique control system that automatically adjusts its speed. This results in a uniform level of protection from a uniformly formed coil.

Space Saving

This results in a machine with the best access and smallest footprint in its class. The Coiler Lite will fit into your existing work environment!

Packer Friendly

The Coiler Lite has internal sensors that protect the operator from harm. If anything interferes with the mechanism, the machine stops. Minimal training is required due to the simple, intuitive interface. Your team can concentrate on Packing.
