

Barrier Film Solution

PolyMask

Consumers come in contact with high-touch surfaces every day – from a car’s steering wheel at a dealership, to handrails at an amusement park. As a result, those areas can often harbor harmful bacteria and viruses, so it’s imperative that they’re cleaned effectively.

Pregis PolyMask’s cohesive film solution offers a **durable surface barrier for quick and easy sanitizing**. Through strategic lane coating technology, the film adhesive does not make direct contact with the surface, which means no residue will be left behind upon removal. Simply peel off and replace with a new temporary protective film to clean critical surfaces.

Product	15145C
Material Description	LDPE
Film Type	Cohesive, lane coated
Color	Clear
Dimensions	6" x 200' w/ 3" cores
