

The Pregis Performance Flexibles Renew™ Series

Packaging solutions that exceed sustainable industry standards

The **Pregis Performance Flexibles Renew Series** is proven as one of the industry's most sustainable offerings. Going beyond just the product, **Pregis Renew solutions impact the entire value chain**, from responsible sourcing, to design, manufacturing, consumption and reuse or disposal.

Renew performance flexibles continue this mission and are:

- Designed for the circular economy
- Engineered performance with less material
- Maximizing recycled content

By choosing Pregis Performance Flexibles, we will partner with you to **engineer film options that meet your sustainability and performance objectives**. Our team is experienced and well versed in designing films that are fit for purpose:

- **Recyclable:** Material structures that are How2Recycle and Association of Plastics Recyclers approved for store drop off recycling.
- **Recycled Content:** Varying range of recycled content films. We design to your product specification to attain the best performance with maximum recycled content. Our knowledgeable sourcing teams work to identify the best source of recycled resins available in both post-industrial and post-consumer.
- **Renewable:** Engineering films with renewable resin sources is a core service offering of our technical team. This growing area of focus is one of the many reasons to choose Pregis Performance Flexibles as your partner in bringing new solutions to the market.

At Pregis, our commitment to sustainability is core to our business and we are passionate about helping customers achieve their goals. Get in touch today to learn how we can partner with you to design custom film substrates that help protect your business, profits and the planet.
