

Castelli Marble Inc.

There are factories, there are distributors, and then there is Castelli Marble.

Castelli Marble is vertically integrated from the quarry to the client. The exclusion of an intermediary allows Castelli Marble to assure the highest quality of raw stone to finished product.

### ***Material Sourcing***

Castelli Marble sources materials from around the world, from the marble quarries of Italy to the fine granites of Brazil. Our purchasing agents visit first hand all quarries to select blocks of stone for every production need. With access to quarries in these countries, we are able to offer you solid stone custom fabrications, slabs, tiles, and mosaics.

Each variety of stone is sourced from a single quarry to ensure 1) proper color matching, 2) consistent variation and 3) exceptional quality. All three of these factors are carefully monitored when sourcing and throughout the production process, assuring that you only receive the highest quality natural stone prod-

### ***Our Factory***

Once sourced, all of our products are manufactured at our factory, located in Ciudad Lerdo, Mexico. Our 100,000 square foot of manufacturing space, combined with our team of artisans allows us to meet our client's needs quickly. While only using the most efficient methods and machinery to process stone, we are able to meet our clients needs quickly, while also remaining extremely competitive on price.

### ***Stocking***

After being processed at the Castelli plant in Mexico, we can provide to our clients full or partial truckload orders, and stock or cut orders from our Cleveland warehouse. Our inventory consists of over 350 unique tiles, mosaics, and bath accessories. Orders often ship from our Cleveland warehouse within 1-2 days, which greatly benefits all of our clients. In cases where the inventory is not on hand in Cleveland, our clients benefit from our vertical integration, allowing us to fill any back orders within a 2-3 week lead time.

### ***Inventory Management***

Castelli allows you to replenish and rebalance your inventory on a per need basis. This avoids your company with the cost of restocking imported items and excess inventory. We offer the flexibility to only order the items you need, at the quantities needed, and at the same per unit cost for quicker inventory turnaround.

Castelli Marble provides an end-to-end solution for your natural stone needs, and we believe this to be the best solution. Our sourcing process ensures the highest quality materials, our factory enables shorter production timelines, and our convenient warehouse location enables your company to get what you need, when you need it. All of this, while maintaining highly competitive prices.

# History

Luigi and his older brother, Alessandro, co-founders of Castelli Marble Inc., were born in Cassino, Italy, an area with a long and proud tradition of working with Perlato Royal, a stone first used by the Romans to build temples at Minturnae, circa 296 B.C.

As teenagers, Luigi and Alessandro, labored alongside the master cutters in their father's quarry where they learned to identify the texture of the finest marbles, as well as respect the inherent beauty of the stone. The Castelli's brought their years of experience, knowledge, and love of stone to America where they founded Castelli Marble, Inc. in 1987.

In 1999, to further meet clients requests and a desire to ensure precise production practices and after already five years of experience in the Mexican stone industry, Castelli Marble built a fully owned, state of the art production facility. Located in Ciudad Lerdo, Dgo, México, an area known as the Carrara of Mexico for the numerous quarries of stone including Rosa Salmon, Rosa Morado, Dutchess White, Blanco Guadiana, Durango, Peach, Chocolat, and Red Travertine. Castelli Marble of Mexico since its founding has grown into a multi faceted company, which has been able to better serve the needs of clients and maintain production demands.

With a family history in the Italian marble trade, today's Castelli, Inc. is the only company of it's kind with a directly owned and operated production facility employing over 150 people. Employees work tirelessly in selecting materials from quarries around the world and custom manufacturing of the most elegant marble products to everyday homeowners as well as highly-regarded architects, designers, builders and clients. Known among architects and designers for their beauty and excellence of workmanship, Castelli's stone can be found in some of the most prestigious commercial buildings and private residences in North America.

Since the company's inception Luigi and Alessandro, as president and vice president, respectively, have grown their company into one of the country's most successful purveyors of quality marble and stone products from all over the world. Marble with the mark of Castelli Marble is the stone of choice for those expecting natural beauty, exquisite workmanship and elegance of design.

# Durango

For a minimal design that doesn't hold back from creativity, the rustic beauty of limestone tiles delivers every time. A consistent beige tile featuring a time-honored and earthy color. The hardness creates a tile floor that radiates minimalist charm. As no two tiles are exactly alike, swirling patterns and sandy color variations are perfect for natural interior designs in need of a hearty backdrop. The neutral tones and subtle patterns make this perfect for every design that wants to stand the test of time.

The limestone offers the possibility for custom sizes, finishes, and fabrication. Stocked in a honed finish. Finishes available: polished, honed, tumbled, brushed, chiseled.

# Stone Sink Care & Installation

Each Castelli Marble stone product is hand carved by our craftsmen, from a solid block of natural stone. Each is unique and will have its own characteristics. Much of the carving is done by hand with a hammer and chisel. We do use some small diamond saws and hand-held polishing tools, but because the sinks are not “machined” each will be a little different. They will not be perfectly symmetrical and there will be small variations in size.

Natural stone veining pattern and background color tone will vary from block to block. Fissures and pitting are naturally occurring features in this material and are not be considered defects.

Do not use standard plumbers putty or oil-based sealers. These products will stain the stone. Please use a stain-free putty, such as Otey or Hercules brand, which are formulated for natural stone and marble on the inside of the drain to seal it to the sink. All sinks come without overflow drains. A grid drain or lift & turn drain without overflow is recommended for lavatory drains.

During the installation process, if you or the person installing the product, have any questions regarding the installation or care of the sink please contact us at 216-361-1222 or e-mail us at [cs@castellimarble.com](mailto:cs@castellimarble.com). For hours of operation please consult our website. Do not install the product if you have any questions or doubts, as we will not be responsible for any damages or wrongful installation.

For more detailed information on care and maintenance regarding natural stone products, please follow the guidelines provided by The Natural Stone Institute.

# Receiving Shipment

All products are shipped via common carrier. Ownership of the goods or materials transfers to the buyer at point of shipment. The carrier will reach out to schedule a delivery appointment. In the event that you or your representative are not present to accept a scheduled delivery, a re-delivery charge will be applied prior to arranging the replacement delivery. You or your on-site representatives (general contractor, subcontractors, installer or any person responsible to the property owner regarding the installation of the product) must fully open & inspect all merchandise upon delivery to the job site. Note any damage on the bill of lading and delivery receipt before signing it or claims will not be accepted by the carrier or shipper.

## Installation

Installation is acceptance of the materials, in its grade, color, finish, & suitability. This is standard in the tile industry. Any concerns should be addressed prior to installation.

Any material questions should be addressed with your natural stone installer first. Please get in touch with us if you have remaining concerns. Color, texture, size, and finish variations are normal in natural stone. If you have any concerns about obvious problems, do not install.

These recommendations are merely meant to point you in the correct direction for a suitable installation. Every project is different; you will need a qualified natural stone installer who can give you the precise specifications for your project. For specific natural stone installation procedures tailored to the requirements of your project, please see the most recent edition of the TCNA Handbook.

◇ If you did not order enough, do not start installation until you have all the material on site.

◇ Dry Lay all tiles prior to install. Pull from all boxes to achieve the best overall blend of color. All tile requires blending, as they naturally vary from piece to piece. It is the responsibility of the installer to remove materials from packaging & dry lay all materials to obtain the customer's approval of the blend before any tile is installed. This procedure is common practice in the installation of tile & helps ensure the beauty of the finished installation.

◇ Only white thinset & unsanded grout should be used. When installing tiles make sure there is 95% or more thinset on the back of the tile to achieve the best bond. For better bonding, wipe the back of each tile to remove any excessive dust.

◇ Tiles with imperfections should be set aside & used for cuts. Cut edges can be sanded to remove jaggedness.

◇ Recently installed tile will appear darker after installation. This is due to the moisture from the thinset & is temporary. This may take up to 30 days depending on climate to completely dry.

◇ Natural Stone tiles do not require trim pieces. Exposed edges can be honed to match the stone's surface. This should be done before installing the pieces.

# Sealing & Maintenance

- ◇ Natural stone over time will patina, this is part of the appeal of using a natural product.
- ◇ Natural Stone needs to be sealed (both before and after grouting) to help defend against stains and aid with water resistance.
- ◇ Always apply natural stone sealer to a small area to ensure the finish is suitable.
- ◇ Natural stone should be sealed in both dry & wet applications.
- ◇ Natural Stone should only be cleaned with mild, pH neutral products.
- ◇ Do not use any scrubbing pads on any stone product.
- ◇ Stone should be cleaned with a clean microfiber cloth, warm water, and a mild pH Neutral soap.
- ◇ Do not use harsh chemicals and items with acids or alkalies.
- ◇ NO BLEACH OR VINEGAR.
- ◇ Using a squeegee after each use will help reduce soap scum.
- ◇ Regularly clean the stone to keep abrasive materials and dirt off, as they may scratch the surface.
- ◇ Keep abrasive items from scratching and dirtying the tile surface.
- ◇ Frequently dust-mop interior floors with a dry, clean, (untreated dust mop).
- ◇ Warm water and a cleaning brush ( non metal bristles) can be used to clean grout lines.
- ◇ For more info please visit [www.naturalstoneinstitute.org/consumers/care/](http://www.naturalstoneinstitute.org/consumers/care/)

# Wet Area Applications

With the use of a waterproofing, penetrating sealer, Natural Stone can be used on backsplashes, baths, showers. Substrate behind the tile in a wet area needs to be completely waterproofed. This should be done by a professional.

- ◇ Behind / under the tile, a waterproof membrane is REQUIRED.
- ◇ Grout is required in between grout joints.
- ◇ Waterproof membrane should be tested & determined “leak proof” by a professional before installing material.
- ◇ Installed tile should be sealed with a waterproof, penetrating sealer.
- ◇ Tiles no larger than 4”x4” should be installed on a shower floor.
- ◇ Mosaics are ideal for shower floors as they provide more traction due to the amount of grout lines.
- ◇ Due to the constant water exposure, all installed shower tile should be sealed at least twice a year
