### Talking Points

- Cascade Collection tile is a fused glass tile with a durable back paint. The back paint is applied in excess of 1025°F and is what gives the glass its color.
- The Cascade Collection glass tile consists of unmounted field tile and mesh-mounted mosaics. The mosaic glass tile is back-mounted with an alkali-resistant mesh and a non-water-soluble glue.
- Cascade Collection tile can be cut easily with either a score and snap tool or wet cut with a continuous rim diamond blade made for cutting glass tile. (Do not dry cut glass tile with a power tool.)
- Cascade Collection glass tile meets or exceeds the requirements, for use in an exterior freeze/thaw environment and/or submerged applications, found in "ANSI A137.2 American Nations Standard Specifications For Glass Tile". In independent, third-party testing, the Cascade Collection was rated as impervious, passed the 300-cycle freeze/thaw test, passed the thermal shock test and received a Class A rating in the chemical resistance test.
- Cascade Collection tile mesh-mounted mosaics can be successfully specified and installed in submerged applications such as pools, spas and water features. The mesh-mounted glass tile exceeds the submerged, bond strength requirement found in "ASTM C482 Bond Strength".
