

# MEET MCLAREN UROLOGY SERVICES

McLaren Northern Michigan provides comprehensive urologic diagnostic and surgical services. We manage kidney stones, lower urinary tract symptoms, incontinence, hematuria, urologic malignancies, elevated PSA or abnormal prostate exams, erectile dysfunction, male infertility, recurrent UTIs, and select STIs. Advanced imaging including ultrasound, CT, and prostate MRI is available, as well as minimally-invasive or robot-assisted surgery. Please refer patients with complex or concerning urologic conditions requiring specialized evaluation.

## PROSTATE CANCER CARE

Patients should be referred if they have an elevated or rising PSA, abnormal digital rectal exam, persistent lower urinary tract symptoms not improving with medical therapy, hematuria, or known prostate cancer requiring staging, surveillance, or treatment planning. Our Prostate Clinic offers coordinated evaluations, comprehensive diagnostic workups, and ongoing management tailored to each patient. Advanced imaging and specialized testing support accurate diagnosis, staging, and risk stratification. Our team includes a dedicated genitourinary pathologist and offers PSMA PET scanning. Care is coordinated with Karmanos Cancer Institute specialists, including radiation and medical oncologists. Surgical options include robotic prostatectomy, with extensive experience among our three staff urologists.

## PROSTATE MRI AND FUSION BIOPSY

We provide high-quality multiparametric prostate MRI for elevated PSA, abnormal DRE,

pre-biopsy risk assessment, active surveillance, pre-treatment planning, or recurrence concerns. Urologists collaborate with Karmanos radiologists to ensure accurate interpretation and reliable fusion-targeted biopsies, which may also limit unnecessary procedures.

All prostate MRI studies are interpreted by a Karmanos Cancer Institute radiologist, ensuring subspecialty expertise and accurate PI-RADS scoring.
