

# MEET McLAREN

# HOME INFUSION THERAPY

McLaren Home Infusion enables patients to receive the intravenous medications and fluids they need in the comfort of their own home, wherever home may be.

Infusion therapy at home is safe and effective, offering patients privacy, comfort, convenience, and individualized education. Infusion therapy at home also lowers risk of infections and has been shown to reduce re-hospitalizations. Home infusion therapy may be right for your patients with infections, gastrointestinal disease or disorder, immune disorders, cancer, and many other conditions.

**McLaren Home Infusion serves the entire Lower Peninsula of Michigan.**

## McLAREN PROVIDES:

- Immunomodulator therapy (e.g., Remicade)
- Immunoglobulin/IV and subcutaneous therapies
- Total parenteral nutrition
- Enteral nutrition (registered dietitian on staff)
- Anti-infective therapy
- Inotropic therapy
- Hemophilia replacement factors
- Steroid therapy
- Hydration therapy
- Pain management
- Alpha-1 therapy
- ALS treatment (Radicava)

*Dosing services available*

## EXPERT STAFF:

McLaren Health Care has an interdisciplinary team of experienced professionals including pharmacists, pharmacy technicians, registered nurses, insurance experts, a registered dietitian, and support staff. Together, the team monitors your patients by reviewing labs, progress notes from nursing visits, and direct patient communication.

## QUALITY OUTCOMES:

McLaren Home Infusion satisfaction scores show that more than 9 out of 10 people who have used Home Infusion services would recommend McLaren to their family and friends. McLaren Home Infusion maintains the highest compounding standards and is accredited by the Community Health Accreditation Partners (CHAP), certified by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) and inspected by the National Association of Boards of Pharmacy (NABP).

## CONVENIENT REFERRAL

- A simple, single-call referral process, which includes insurance verification, nurse scheduling and dosing
- Weekly patient updates for most therapies
- Scheduled nursing visits to coincide with treatment
- Medication delivered directly to the patient's home
