- Joint replacement
- Spine surgery
- Foot and ankle care
- Reconstructive surgery
- Orthopedic trauma
- Sports medicine
- Arthritis care
- Joint arthroscopy
- Non-surgical treatments
- Minimally invasive surgery

ADVANCED TECHNOLOGY

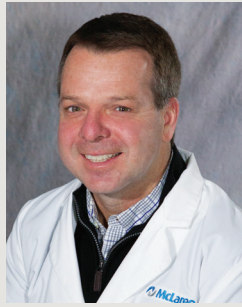

- **MAKO® Robotic Arm-Assisted Surgery** for hip and knee replacements. The MAKO robotic arm is a surgeon-operated and controlled tool used for both total and partial hip and knee replacement surgeries. This technology uses CT scanning and 3D modeling for advanced accuracy and precision.
- **Hana® Table** for hip replacements. The Hana Orthopedic Surgery Table is a state-of-the-art table that allows surgeons to use an anterior approach for total hip replacements, enabling the surgeon to replace the hip through a short single incision without detaching the muscle from the pelvis or femur.
- **BrainLab® Navigation Platform** for spine surgery, offering a powerful and versatile real-time image-guided surgery platform, supporting accuracy, safety and interoperability throughout the procedure.
- **OHX® Microscope** for surgical spine cases provides special lenses that allow surgeons to see in fine detail to navigate complex spinal structures with precision.
