

MEET KARMANOS

# BONE MARROW AND STEM CELL TRANSPLANT PROGRAM

The Bone Marrow and Stem Cell Transplant (BMT) Program at the Barbara Ann Karmanos Cancer Institute is led by specialists in medical hematology and oncology, infectious disease, immunotherapy, pediatrics and internal medicine who bring years of experience to the field of transplantation. The team is actively involved in clinical research in bone marrow and peripheral blood stem cell transplants.

## THE KARMANOS ADVANTAGE

The Karmanos Cancer Institute BMT Program was the first transplant center in Michigan. Today, it is one of the most robust programs of its kind in the United States. For more than 20 years, our program has received full accreditation from the Foundation for the Accreditation of Cellular Therapy – the most extensive spectrum of accreditation offered by FACT for bone marrow and stem cell transplantation programs.

Karmanos maintains one of only two cord blood stem cell banks in the state of Michigan. These cord blood units are registered with the National Marrow Donor Program and are accessible to transplant centers worldwide. Our partnership with the Children's Hospital of Michigan at the Detroit Medical Center makes Karmanos an accredited center not only for the treatment of adults, but children of all ages who need bone marrow or stem cell transplants.

## CONTINUITY OF CARE

We are grateful to serve our region and consider it our privilege to offer comprehensive care for your cancer patients. To refer a patient, email [newpt@karmanos.org](mailto:newpt@karmanos.org), call the referring provider line at **1-877-KARMANOS** (1-877-527-6266), or to access the online referral form, visit [karmanos.org/kcicareconnect](http://karmanos.org/kcicareconnect).

## PATIENTS WHO BENEFIT MOST FROM A CONSULT WITH OUR BMT TEAM:

### For Transplants

- Acute Myeloid Leukemia
- Acute Lymphoblastic Leukemia
- Amyloidosis
- Aplastic Anemia
- Anaplastic Large Cell Lymphoma
- Chronic Myeloid Leukemia
- Chronic Lymphocytic Leukemia
- Follicular Lymphoma
- Germ Cell Tumors
- Hodgkin's or Non-Hodgkin's Lymphoma
- Mantle Cell Lymphoma
- Multiple Myeloma

- Myelodysplastic Syndrome
- Myelofibrosis
- Peripheral T-cell Lymphoma
- Sickle Cell Disease

### For Car T-Cell Therapy

- B-Cell Acute Lymphoblastic Leukemia
- Diffuse Large B-cell Lymphoma
- Follicular Lymphoma
- Mantle Cell Lymphoma
- Multiple Myeloma
