FOR IMMEDIATE RELEASE**Halliburton launches Intelli portfolio of wireline conveyed diagnostic well intervention services**

HOUSTON – December 3, 2024 – Today, Halliburton Company (NYSE: HAL), introduced the Intelli suite of diagnostic well intervention wireline logging services. This suite of services will enable Halliburton to collaborate more than ever with customers and improve well insights to enable increased production, help extend asset life, and reduce total cost of operations.

“As customers look to maximize production and improve the efficiency of their wells, our Intelli suite helps improve downhole insights in a highly customizable way,” said Chris Tevis, vice president of Wireline and Perforating. “Because each job is unique, we wanted to develop a suite of products that could be used individually, or as an integrated solution, ultimately, delivering a better experience and result for our customers.”

Halliburton’s Intelli suite of services provides customers with a complete diagnostic well intervention package. The suite consists of:

- **The IntelliSat™ pulsed-neutron logging service** provides reservoir insights either in open hole or after a well is completed. This service helps improve recovery with the detection of bypassed pay, and provides spectroscopy and KUTh measurements. The IntelliSat™ service delivers a more robust and efficient method of reservoir saturation measurement, fluids monitoring, and borehole diagnostics compared to legacy sensors.
- **The IntelliFlow™ array production logging service** enhances reservoir insights with the incorporation of co-located fluid ID and flow rate sensors. IntelliFlow™ provides more accurate production profiles, precision phase analysis, and dynamic flow information. The compact design allows for a simpler, more efficient operation.
- **The IntelliGuard™ corrosion evaluation service** represents the latest generation of high-definition casing inspection technology. It quantifies metal loss in up to seven concentric casings, and pinpoints damage without the need for costly well intervention.
- **The IntelliScope™ leak and flow diagnostic service** identifies precise leak sources and flow paths vertically and radially behind pipe in a single, continuous pass.

These services can be combined or used separately. When integrated, the Intelli suite of services saves time and cost through data acquisition in a single run. Supported by Halliburton’s global geoscience and production team, these services assist customers with their current and future well intervention needs.
