ARAMCO AWARDS HALLIBURTON LONG-TERM CONTRACT FOR UNCONVENTIONAL GAS PROGRAM

HOUSTON – July 15, 2026 – Aramco awarded Halliburton (NYSE: HAL) a multi-year contract to deliver [integrated stimulation and completion services](#) for unconventional gas development in the Kingdom of Saudi Arabia. This award is part of a broader multi-billion contract, supporting one of the largest unconventional gas development programs globally.

This award builds on Halliburton's established portfolio supporting Aramco's unconventional program. Across many of the Kingdom's unconventional plays, Halliburton delivers a comprehensive suite of drilling and completion solutions. Its integrated service model is designed to support high-intensity development programs and improve operational efficiency, workflow predictability, and execution reliability. This collaboration supports broader regional efforts toward integrated unconventional development programs.

"This award highlights our long-standing collaboration with Aramco and builds on more than 80 years in the Kingdom, while advancing unconventional gas development in the Kingdom," said Rami Yassine, president, Eastern Hemisphere, Halliburton. "Beginning in the third quarter of 2026, Halliburton will deploy the Kingdom's first fully integrated intelligent fracturing platform through [OCTIV® Auto Frac](#) and [Sensori™ fracturing monitoring services](#) to contribute to asset value for one of the world's largest unconventional fields."

Under the program, Halliburton will deploy intelligent automation solutions for fracturing to optimize performance in real time and support disciplined implementation across multi-well campaigns. These technologies support digital integration across operations while advancing efficiency and operational reliability.

Development activities in the Jafurah Basin are underway. To support this effort, Halliburton plans to increase its investment in local manufacturing, improve its supply chain, and expand workforce development programs within the Kingdom, aiming to scale operations and sustain high performance as unconventional activity accelerates.
