

Powerful app integrations with Webex

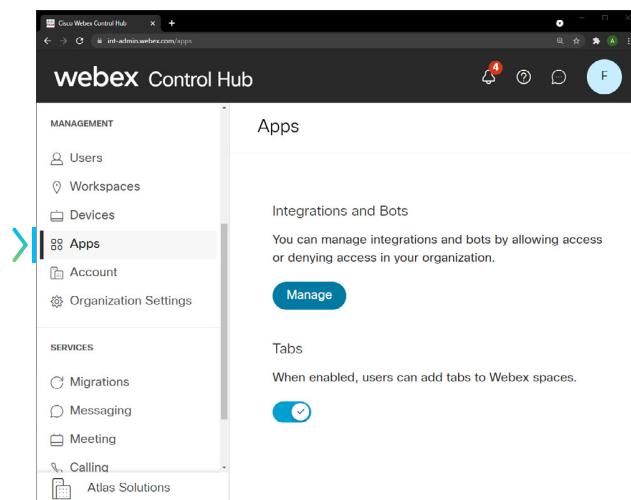

Integrated apps amplify the way you work in Webex. Apps like Jira, Trello, Mural, Miro, Box, and Salesforce boost productivity while Webex takes care of keeping you and your team connected and in control.

This quick start guide summarizes some of our favorite apps for Webex that make hybrid work simple. Be sure to check out our other detailed guides in this series. You can find them at essentials.webex.com.

Add and enable any integrated app you want to start using. Simply log in to Control Hub, click **Apps**, and enable **Tabs**. Then, all you need to do is click the **Apps** link at the top of your Webex space and select your app. To see all available apps, visit the [App Hub](#).

Our top tip: Remember, you can also add websites to Webex spaces using a shortcut. This lets you and your team browse important web content from inside Webex—and there's no need to switch apps!
