

# Choose the best camera mode for your meeting and device

Meetings almost always include one or more people joining remotely. With the right camera settings, you can ensure that the meeting is equally engaging for everyone in the room and for those joining remotely.

Camera modes allow you to cater to any size or complexity of room or meeting type. And, the camera mode applies to any type of meeting platform including Webex, Microsoft Teams, and Zoom.

[Get started](#)

Depending on the device, you can choose from one of the following camera modes:

**Frames** – Camera zooms to show people individually or in smaller groups. See different scenarios and examples [here](#).

**Group** – Camera adjusts to show everyone.

**Speaker** – Camera follows the person speaking. Maximum distance for speaker tracking varies based on your products and the room.

**Manual** – Adjust the camera yourself.

**Custom preset** – [Create custom views](#) with predefined zoom and camera direction.

**Tip:** Your [selfview](#) shows what others see from your Board, Desk, or Room series device in a call. Use it to confirm that they see what you want them to see.
