Your adoption journey, plan your next steps

Plan

Onboard and implement

In this stage we'll help you define your business outcomes and implement Webex Calling. There are four milestones in this stage:

- Determine your vision for Webex Calling
- Engage with executive sponsors
- Install & configure your Webex Calling services
- Prepare for launch

Launch

Use, engage, adopt

After implementation, it's time to onboard your users and then identify early adopters. These milestones help your users get the most out of Webex Calling services:

- Deploy Webex Calling to your organization
- Host adoption events and training
- Recognize and reward champions
- Success tracking and monitoring
- Help users meet their intended use cases

Grow

Maximize your investment

The third stage of adoption is where the refinement happens. New features and additional solutions help to optimize and expand Webex Calling. Only a few milestones left in this final stage:

- Roll out new features and services
- Explore and attach adjacent solutions
- Engage and become a subject matter expert

You're almost there. Don't stop now. It's worth it!

Companies that implemented solution adoption guidebooks from start to finish experience an average of 25% increase in ROI, according to a study by McKinsey.

You've successfully set up Webex Calling in Plan and effectively rolled it out to your organization in Launch. Now, let's maximize the benefits of Webex. Only 3 final milestones to your adoption journey: **optimize**, **expand**, and **advocate**. Use these resources and guidance to ensure that Webex Calling is being used effectively and efficiently.

Keep it clear and concise:

Avoid jargon or overly technical language. Ensure the story flows logically and is easy to follow.

Act on key data points

Translate key usage data and reports into actionable insights to make informed decisions. Here are some tips to help you effectively analyze and act on data:

Select relevant metrics

Identify the key performance indicators (KPIs) that directly align with your objectives and goals established in the Plan stage. Avoid overwhelming your audience with too much data; instead, present a concise set of impactful metrics.

Tip: For example, if you're focused on call queue performance, review the KPIs already developed for call queues including total answered calls, abandoned calls, average wait time, etc.

Utilize data visualization

Graphs, charts, and dashboards can make complex data more understandable. Visualization tools in Control Hub can help you identify trends and outliers at a glance.

Compare periods

Compare current data with historical data to identify any significant changes or trends over time.

Demonstrate ROI

Whenever possible, show how the data and insights directly contribute to the organization's bottom line or other key performance indicators. This helps senior leadership see the tangible impact of your work.

Anticipate questions and concerns

Consider potential questions or concerns that senior leadership may have and be prepared to address them. This demonstrates that you've thoroughly thought through the data and its implications.

Elevate data to leadership

When it's time for quarterly reviews or renewal discussions, use these tips to present data to your leadership team.

Take [these courses](#) to learn how to create, modify, and generate reports in Control Hub. You'll also gain skills in monitoring through KPIs, performance graphs, supporting data, as well as troubleshooting to ensure user productivity.
