

Turn talk into action with Webex Assistant

Taking notes and sending out action items after meetings is best practice, but who has the time?

Webex Assistant for Webex meetings gives users a more productive way to work before, during, and after meetings. With simple voice commands, there's no need to take notes, capture action items, or find meeting controls. Webex Assistant can create highlights from the automated closed captions so attendees can easily follow along or catch up on the recording later. And when the meeting's over, the host can easily search, edit, and share any notes or action items with everyone.

Speaking of everyone, break down language barriers with real-time transcription from English, Spanish, French, and German*. That way everyone has an equal opportunity to participate and be heard.

*4 spoken languages for transcription (i.e. English, French, German, Spanish) are included for free for Webex customers with paid subscriptions. These features are expanded to 13 total spoken languages and 100+ caption languages with the [real-time translation license](#). Real-time translation is not available for Webex for Government.

Time to roll out? Share our adoption materials with your users so they can get to know Webex Assistant.
